Come on you Unix god-like beings and rec.running watch dogs, can't we get this duffus to stop? I hear that a strategically placed nuclear device can solve most problems.

Mark

Any new cordless phones'll either be digital (& hence encrypted) or will
be set in a certain band of freq (902-928 as suggested by John) and will
probally shift freqs during a call anyway.

Well in my area there is plenty to listen to in the 900 mhz area.
They are selling cheap 900mhz phones all over the place and they are NOT
DIGITAL or encrypted or anything they are in the clear.
as for the freq hopping all you need is a fast scanner. I have never had
this problem.

10 46.970 49.970

NOTE: SOME OF THE OLDER CORDLESS PHONES USING THE FREQUENCIES MARKED BY THE <*> ASTERISK ARE PAIRED WITH FREQUENCIES AROUND 1.7 MHZ. LISTENING TO THE 1.7 MHZ SIDE WILL YIELD BOTH SIDES OF THE CONVERSATION.

THE BEST FREQUENCIES TO MONITOR ARE THE 46 MHZ AS THEY WILL REPEAT BOTH SIDES OF THE CONVERSATION. POWER OUTPUT OF BOTH BASE AND HAND UNITS ARE LESS THAN 100 MW OR 1/10 WATT SO THE RANGE IS LIMITED.

CAREFUL MONITORING WILL PRODUCE SOME OUTSTANDING RESULTS. IT IS NOT UNCOMMON TO HEAR CONVERSATIONS UP TO A MILE AWAY.

When will you expand you business into modifying remote controls and
garage door openers? Are you intrested in the idea of franchising your
Y2K Mods?!?!

Hey--not only that, but I found out the air conditioner in my pickup truck is not Y2K compliant. I changed the dater on my calandar and now I find I have no coolant in the AC!

Best wishes,

Jim Lowther

OH MY! I just had a memory flashback. I had totally forgotten about
those 4 channel scanners with red LED's. I, too, thought they were
simply amazing. And look where we are now! Incredible. Who would have
thought we would be marrying a scanner to a computer which was hooked up
to a worldwide network, to download local frequencies, manage our scan
groups and more. Makes me kind of excited to anticipate where we will be
10 years from now! BTW, I wonder if the 245SLT is Y2K compliant! :)
(Just a rhetorical question...no need for answers on that one!)

20. FS: ### MOTOROLA GP-68 VHF PORTABLE.. NEW!!

Newsgroup: rec.radio.scanner
Date: 1999-08-01 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19990801142117.03957.00001227@ng-fi1.aol.com>
Source record: 111204

For Sale: Motorola GP-68 VHF Portable Radio

20 channels
5/1 watt selectable power output
136-174Mhz
DTMF Keypad
Automatic Repeater offset options for easy Ham access
Has alpha display of channel number & frequency
Scanning with user-programmable scan lists
All the standard options, such as busy channel lockout, time-out transmit, etc...
Comes with brand new, "still-in-the-box" drop-in charger and antenna

100% fully user-programmable - no software or computer necessary! Simply type in the frequency in the keypad, and you're instantly on the channel! Then, choose your CTCSS/DCS/DTMF tones/signalling options, and save the channel into memory!

I bought this radio at a Hamfest two weeks ago, but since then have been given a brand new radio by my company, so I don't need this one. This unit is literally 2 weeks old, STILL IN THE BOX! Comes complete with manuals, and programming instructions. The radio and genuine Motorola drop-in rapid charger, are both in original packaging and never been used.

This radio goes for around $800 new... Need to sell fast so open to any offers.... Please email with any questions. Picture available upon request. Thanks for looking!

New N.Y.P.D. Radio Plan & Frequencies
By David M Torres, New York City

the following is updated radio frequencie information for the
new york city police dept. they are in the process of re organizeing thier
complet radio network which is now in phase 2 of a 4 part phase they
expect it to be completted within 2 years
phase 1 was the re organization of all city wide and special units
phase 2 is the re organization of all division radios
phase 3 will be the frequency expansion and narrowing the band
phase 4 will be the purches of new radios and fadeing out the
motorola saber's
as for the new york city fire department E.M.S. units they are also
re organizeing thier radio system from 800 trunk back to a conventional system
they will be useing motorola ASTRO saber's with both EMS & Police frequencies
i would also like to point out the phase 2 is not fully completed yet its
a very slow process and it dose take time but it is on its way so the changes
can take place at a blink of your eye

as always happy listening and keep your ears on.................

Comes delivered in the original case to store unit and antenna

Get complete specs at http://www.mphindustries.com/k55.html

The K-55 still sets the standard for reliable speed enforcement. This time-proven radar continues to be the choice for a large number of law enforcement agencies because it is easy to operate and has a wealth of established case law. In fact, the accuracy of the K-55 has been upheld in traffic court and at the appellate level more often than any other traffic radar. The K-55 is NHTSA/IACP certified and features a two window speed display, simple remote control, and all of the functions necessary to prosecute speeding violations.

Unit in excellent shape and is in 100% working condition... Selling because I don't need it anymore. This unit sells for over $1200 new! Looking to get $250 plus shipping.Please email with any questions. Picture available upon request. Thanks for looking!

I guess what my concern would be is if public service (police, fire, ems) were to go digital (vs analog) would these most likely be encrypted? I thought the answer was yes, but you raise an interesting possibility, here, that they would not be.

As the site will take me at least a few weeks or so to complete I have put the following areas for you to use in the mean time

1) Live Java chat area (scanning/decode/space chat only)
2) Message board discussion forum (as above)
3) A classified ads section (to buy and sell radio/space/sciencew related items

I hope this will be of use for now and I will endevour to get the rest finished as quick as poss.

Please use these areas sensibly and they should work well for all of us

thanks

From: hadden@htc.honeywell.com
Message-ID: <wklnbvi3mx.fsf@htc.honeywell.com>
Source record: 111224

hello, i think this question was just asked, but the answer wasn't
clear from the followups i sawq, and the others have fallen off our queue.
so (whew!) what happens if i order a cellular unblocked scanner from
canada? do i get it? do they confiscate it at the border? do cops
show up at my door?

pointers to a faq or personal responses greatly appreciated.

thanks in advance.

Sir, you simply don't understand that when you are good looking you
can basically skate through life and people will love you even if you
haven't done squat. JFK jr. could have become president on his looks
alone. Now thats a scary realization about how our society works.

Lets see, Ted Kennedy killed a women, then let her lay on the bottom of the ocean for a couple of days before reporting what happened. This sounds real honorable. Later, in the 1960's, Ted Kennedy got the immigration laws changed so that we have had more immigration into this country in 30 years than we have had in our history. So, now there isn't a city in the U.S. thats safe. And oh yeah, Ted Kennedys father was a devout nazi sympothizer.

Thanks, but no thanks. I say run all of the kennedys out of office.

For those of you unfamiliar with antenna and transmission line theory,
the use of unusal antennae can indeed cause this sort of thing to
happen. It is very unlikely to happen with a real cell phone however.

The problem with an unusual antenna is portions of it, or the antenna
itself may be a very poor match for the feed line. If I feed a 1/4
wave vertical with a 2 watt signal, the RF voltage at the base of the
antenna is about 10 volts, and the RF current about 200ma. Neither
of which will produce an appreciable spark.

If I were to use make that antenna 1/2 wave long, the impedance is
infinite, so it has a very high VSWR. That can result in MUCH higher
voltages, and much higher currents at specific points on the antenna.

How bad can it get? Well, if you feed a 80 meter dipole, nominally 72
ohms with a 40 meter signal, and use 100 watts, the Coaxial Cable
nominally rated for 1kw is likely to catch fire! The I^2 * R losses at
the point in the feed line where the current is highest are sufficient
to burn up the cable.

How come? Well the VSWR in this case is probably about 100 :1.
At 1:1 the are no appreciable standing waves, so the feed line sees
about 80 RF volts, and 1.2 amps essentially constant on the entire
feed line. At 100:1, at the points of peak constructive interference,
the voltage at certain points might be as high as 8000Volts (possible
causing breakdown), and current at certain points might be as high as
120amperes. Hence, the use of a vent pipe with suspect metal to metal
connections may be very different than a real antenna.

Hmmm. You might want to discuss that with Bill Cheek. MDT transmission are ASCII digital, not encrypted, yet Bill and his wife were arrested by federal agents and are charged with selling an illegal device - an interface and the associated software to decode MDTs.

I see you've set aside this special time to humiliate yourself in public.

Now to answer your question.....Nah just sick of stupid people posting ludicrous information when they don't have a clue.....if you don't know ask or just shut-up and read then you will learn.

And as for the stupid replies to earlier posts claiming to know absolutely for a fact blah blah just realise that you are cross-posting to several other newsgroups where your info is not relevant or wanted...

I'm also sick of the attitude of several people who do all of the above and have a "I'm from USA and I'm right your wrong because the sun shines out of my ....." Well the news is that it don't and you are only proving to the rest of the world who are getting sick of your irrelevant cross-postings that are mostly off-topic.

The contribution you have made to our global society is of less wisdom than this gem "Forecast for tonight: Dark."

Go an give yourself an upper-cut

Oh and I'm not being rude. You're just insignificant!!

Yes, I remember those days. I remember being in Radio Shack when I was maybe 12-14 years old, and seeing the 4 channel pocket scanner, and the eight channel base, with the LED's scanning across. I would have died for one of those, but they were beyond my financial reach at the time.

No there is nothing to bitch about with the BC 245. What more could you ask for at the going price?

As for Smart Scanner, would people rather wait for Uniden to release the 245 when Smart Scanner was done? I don't think so!

Tom

The REAL story is located here:

http://cnn.com/US/9906/24/exxon.cellphones/

They are concerned that if the phone were dropped, it
could spark, igniting gas fumes. I'm sure they will test
this theory out by having a gas station attendent, who's
smoking while pumping gas in a running car, drop a
phone... BOOM! They must have been right!

;-)

Dear 245/895 Owners interested in WinScan:

As most of you have heard, the release of WinScan has been delayed due to a problem with the replication house we are using.

I wish was the delay was related to something else other than replication, so we could take responsibility for the delay. Unfortunately, this is the draw back of using an external replication service, expecially when you are a smaller customer.

In exchange for the delay, the programming staff is working overtime to create a shareware version of WinScan that will be available for download on August 1! As soon as the shareware version is available, I will post an announcement on this site and also on rec.radio.scanner and alt.radio.scanner.

I would like to take this opportunity to appologize to everyone who has per-ordered copies of WinScan, as I know how frustating delays in software releases can be. Pozilla software is here for you, the customer, and we will do everything in our power to make you happy.

If at anytime you have a problem or need assistance, please do not hesitate to send us e-mail.

Once again, I would like to thank everyone for their patience, suggestions, and comments.

Warmest Regards,

Adam Goldman

No, the law reads that no one can build a digital scanner that decodes
encrypted digital signals. Normal digital signals are ok to scan (the data
channels on the trunktrackers are digital!!!)

[last changed 19-Jun-99]

The latest version of this file can be accessed via my web page at:
http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See: http://www.wvsc.wvnet.edu/~fcc/index.html

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while | supplies last! In addition, the newest version, Scannerbase XE, is | available for free download from CSP's web site. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

Already been there but thanks any way. I've been trying to gather data on these but after an hour or two all the talk groups sound the same. I use trunker.exe and 2 scanners connected through communication ports on my computer and I can see just how many groups are using the system at once. On aa03 it can be as many as 20 - 25 groups at once. aa03 shares the same frequencies with other Trunking systems.

I wish I knew someone in the Peoria, Pekin and Washingtion or general receiving area who had a Trunk Tracker. It's hard to research things when there's almost nothing to research. I was hoping someone found something I didn't, I really need to narrow the search down. :(

----CUT--------

This one is even better , a certain somebody complained to me yesterday that some hyperlinks on my "un-original site" did not work and if not would i not put them there at all !!!.

I will spell this out for any more morons out there who mail me with something so stupid....

THE SITE IS UNDER CONSTRUCTION !!
it say's it in bright RED letters on the main page...this means that until it is complete there will be gaps in places and some things may not work.

If you cannot handle that then do not visit the site it makes no difference to me !

OK, here it is , nearly all the spell checkers on ALL of my software is American , I am British and I do not want my language soiled any more than it already is. I do not have the time to sod about re-checking the spell checking that the American checker has done . I would rather I typed bad english than have American software dictating to me how to spell my own damm language !

so there (nothing personal to my American "cousins" by the way)

Land of the free? Where citizens are forbidden in the privacy of their own homes to tune their radios through "forbidden" frequencies? Where large, corporate-financed lobbys find an ultimate solution that crushes personal freedom preferrable to implementing technical improvements or informing cellular users that their calls are not secure?

Where is Barry Goldwater, now that we need him? At least, with his amateur radio background, he understood the history of radio communications and the need to keep radio reception free. Is the problem that we have failed to elect legislators who are something more than a pretty face on TV?

Don't you think it's high time that we, as citizens, made it known that we're fed up with this and won't take it anymore? Let's find out which individuals voted this outrage into our laws and then turn these bastards out on their ears.

There is of course a strong parallel to our loss of communications freedom with the efforts made to control firearms and ammunition "for our own good." Wasn't it Jefferson who said that our greatest fear should not be with those who wish to cause us harm, but with individuals or groups who with the best of intentions are quick to sacrifice our freedoms in the name of expediency and temporary public outcry?

It is surprising to discover how many seemingly "informed" people are shocked to discover how Big Business communications has dictated how and when our freedoms have been eliminated (with all the best of intentions, of course). Most shocking to me is how so many have blandly accepted this outrage, claiming that "they can't enforce it anyway, etc." And it appears to have been done without a word in the press, and evidently with the blessing of the ARRL.

Stand up and be counted. Do something a computer can't do.

> arrest and addressed it.... i'll
> try to check. but their lead time
> may preclude facts known this day

Yes, Bill, they have. The arrest happened several months ago, so you've have to look in MT's back issues to find their comments. Or, you can spend a few cents to call them and ask them to confirm it.

Also, if you go to Rich Wells' web site, http://www.strongsignals.net, you can find archived there two letters from Bill Cheek himself explaining the arrest, when and how it occurred and his position at that time. He has not addressed the situation publicly since then, probably on the advice of his attorneys.

The web site, btw, is http://www.newsday.com, but because the arrest was several months ago you can no longer access the story from the web site.

Absolutely true. So all these phones the telco's push for safety reasons in their ad's at 25.00 a month are all a big waste of money as 911 service is always free! Keep an old Motorola brick phone and a cigaret lighter cord in every vehicle-----20.00 in the pawn shop and you are set for life.

Source record: 111108

Please don't consider this question simplistic but I purchased a used handheld scanner from someone on eBay and I can't get it to work. I don't know if it doesn't work or if I am not using it properly.

It is a Bearcat BC60XLT which looks to be several years old. It has a code for date of manufacture: OIID. The back says it has 10 band coverage.

On the front there are buttons marked: RVW, SCAN, MAN, L/O, WX, LOCK and a keypad with number from 0-9, "." and "E".

Here's the problem. I can turn it on and the number "1" appears in the display. Static comes from the scanner. If I press SCAN, nothing happens. If I press RVW, the display reads 4,5,6, -,4,5,0 and then it returns to "1". It doesn't actually scan or do anything but produce static. Yesterday, I received a weather broadcast by pressing WX.

I know there is reception in my area (Philadelphia) because I tried someone else's scanner a while ago and got police among others.

Any help would be much appreciated.

100. Test mode/cordless phone

Newsgroup: rec.radio.scanner
Date: 1999-08-02 00:00:00 UTC
From: mjh@oberon.ark.com
Message-ID: <37a61a08.1931172@news.ark.com>
Source record: 111114

All cordless phones have a test mode. I test all models/brands and
here are some common codes to try on your phones:

UNIDEN (low band and 900Mhz)

Handset
1. Disconnect the battery
2. Hold down * and # keys.
3. Connect the battery pack and listen for beeps.
4. Press numbers on the keypad to select receive, receive + transmit,
tx,rx.

6= receive
2= transmit unmuted audio
1= transmit muted audio
7,8,9 = ringer tests
0 = transmit and receive
Press the channel button and you can switch channels - hey now

ya got a handheld scanner
5. To exit press the talk button

Base
1. Disconnect the adaptor from the back of the base
2. Hold down PAGE
3. Hook the power back up and press page to transmit on the channels.
4. To exit you have to unplug and plug the power back in.

Note This works on the "secure" 900 Mhz digital/spread spectrum
phones! The people who are saying nothing is secure are correct. Haha!
So if your enemy/ friend bought a $100 digital phone, go get one and
use it to monitor them or whatever.

I have more codes but Uniden's seem to be popular so someone try these
out and tell me whatya think of the codes.

Note: the above was posted Sat, 20 Dec/97 by William
<1wa@pangea.ca> titled "Cordless phone TESTMODE- yes they have one.
I was thinning out my printouts when I discovered the above, and
hopefully it sheds some light as to the "security" of DSP phones.
As for me and my C.Crane VTECH 905NDL.....

ROTFL - someone actually said that? Oh, that's funny... hee hee....

Ian, just remember that no matter how hard you try someone will always find
something to bitch about, no matter how petty or small. And it never fails
that one or two people will email you with something as off-the-wall as
this. I've gotten my share of "whoppers" like this too. Don't let it get you
down. I too have visited the new site (I was hoping to get Winflex because I
deleted my copy, but it's not there yet. Darn...) and I like it. Looks like
you've spent alot of time on it, and it shows you care about the hobby. I
say good job! Keep up the great work, and let us know when the downloads are
back.

Thanks,
-Phil

I have a MINT FRG-9600 with box, manual, sales brochure, mounting bracket, power supply, and 12V cord for mobile operation.

This all mode VHF/UHF communications receiver covers 60-905 MHz, without "breaks" in the 800 MHz band.

The price for this radio is $350. I will accept personal checks, but I will not ship until your check clears. I will ship next day if payment is made by U.S. Postal Service Money Order. I will split the cost of shipping and insurance with you.

Thanks!

Bob

Hi,
I'm new to the hobby and I need help on trunk scanning.....

I just bought a Radio Shack Pro-90 and try to program it for local police trunk group (Ottawa, Canada).
The frequencies that I use are (from my own monitoring and from www.bearcat1.com/fleeton.htm):

866.2125 (1) 866.3375 (2) 866.4625 (3) 866.7125 (4) 866.8375 (5)
866.9625 (6) 867.2125 (7) 867.3375 (8) 867.4625 (9) 867.7125 (10)

(I assume (2) is the control channel)

I'm not able to have the scanner track the trunk system. In regular channel scan I can hear calls hopping accross these channels but turnning on trunk scan becomes blank. I've tried other channels that sounded like data/control channels and some will give me '-----' on the display but no ID, not sound.

My questions are:

1) How can you tell which is the right control channel?

2) Is there any way to tell whether they use type I or type II trunk system?

3) If type I, any hint to program the fleet map?

Any help or hint is greatly appreciated, I've spend quite a while already trying to figure this out :-(

Regards,
Ed

Regards,
Ed

When you put the main channels in: 800's
you then hit trunk. then hit it
and wait for two beeps. then hit
the bank you want to program into.

those programs are the ID"s for that
which you want to put in...

you an also hit search and allow the
radio to scan for you to find the
ID's...when they come up you can see
what type you have based on their
identifications.

if you have a list of the channel ID"s
for the bank ONE then you just hit the
first entry after hitting into the
trunking mode and begin programming
from 1 through as far as you want it
to go. Or how you want your channels
to go in sets....

with the 235 you get five sets of 10.
with the 245 you get ten sets of 30.

as a trunk mode on trunk channel One.
then trunk channel two...you get same
on trunk channel you get same...etc.

on the 235 you can only listen to one
set of trunked channel
on the 245 you can listen to only two
sets of trunked...motorolla/GE or both
of same.

u really have to read the manual very carefully and just allow one part to be done as you proceed.

I recently looked for info and stuff on my old C64 on the net, and it seems there's a large underground of people involved in creating new software and uses for the old CBM stuff - they even developed upgrades that enable online access, 20X chip speed increases, and I think one guy is using his C64 as a webserver machine for his website! Check out the Commodore WebRing at:

<www.webring.org/cgibin/webring?ring=cbmringid=65list>

and another site is:

<www.cucug.org/c64128.html>

before you toss 'em...

We ship hundreds of parcels such at radio scanners and telephone products into Canada every
week. Almost all the orders are delivered overnight or within two business days
when we use United Parcel Service Air services, DHL or Fedeal Express. If you are using
United Parcel Service, and want to avoid brokerage charges, you must send your package by the UPS Express Plus, Express or Expedited Services. These premium air services
include free routine customs clearance. Additional information regarding exporting to Canada may be found on our web page at http://www.usascan.com then
click on "CEI News". Some items such as a controlled cryptographic items (CCI)
may require an Import Permit . If an Import Permit is necessary, there is an extra
charge of $22.00 CDN. You will find the UPS contact numbers on our web site.
If you use UPS ground service instead of air services from the states, the UPS tarriffs do
not include entry preparation charges, customs clearance, disbursement fees or
governmental department clearance. To avoid delays, the country of origin must be
correct on your documentation. In addition, all shipments must have a street address. Post office
boxes should not be used. Your local telephone number should be provided if possible.

If you have additional questions, feel free to email me at cei@usascan.com or
call the CEI export deparment and ask for the Canada desk at
1-800-USA-SCAN or +1-734-996-8888.

Yes Bill Conduit, I do. I've read the reports of his arrest in both the New York Newsday newspaper and a newspaper in California (sorry, I don't remember the name). I've also talked to the U.S. Attorney's Office in New York City and while they won't discuss specifics of the case they did confirm the arrest of Bill and Cindy Cheek.

built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

That's what I thought the concern was originally but it isn't.
Read the story at the link to find out what they are really talking about.
It is even more silly...

http://cnn.com/US/9906/24/exxon.cellphones/

Don't drop your pagers, walkman radios, or flashlights near
gas stations! No mention of the dangers of pumping gas during
a lightning storm. Guess a spark from mother nature isn't as
dangerous as a man made one. How about when the humidity
drops below 40% and static electricity could arc from the pump
nozzle to your gas tank? If anyone got serious about the 'what ifs',
we'd be walking.

Source record: 111167

Can anyone provide info on the following? I traveled thru Susanville, CA on July 30th. I was tracking the Moto system used at the prison there for awhile, then did a qucik scan thru the VHF gov't range. I found a moto control channel on 169.600. At first I thought it was a fluke image, but as I drove thru town, I verified it on 3 different scanners. Unfortunately, I didn't have the 245xlt, so I couldn't scan it...Anyone have any ideas? There is an Army base nearby, but I thought it was closed down a few years ago.

Thanks,

Brett

Ok JOHN

so you say that Bill Cheek and wife
have been arrested in
new york and the Dist Attorney
office says it's true.

OK JOHN?

so you say that you found this info
in the newspaper named:

New Youk Newsday...a newspaper.

OK JOHN!

John, I cannot find this newspaper on
the computer with running many sources
that have these newspapers in their
mainframe files: nada, zilch, no boner.

OK JOHN

John, maybe you know of a www site
with this info that you gleaned this
info from? No such paper is listed
as you spell it. above is my spelling,
but you get the drift.

OK JOHN...what sayeth thee?

bill conduit
etc.

so how do we mount a fund for
the Cheek guy? where do we
send funds? who knows? Got
to be someone who can open up
to that address or whoever is
able to get funds to Bill's
people.

has Monitoring Times noticed this
arrest and addressed it.... i'll
try to check. but their lead time
may preclude facts known this day
or tomorrow.

i'll check his www site.

anyone else with ideas?

just to think that Mackey
was bragging about turning
him in and now him and his
wife are arrested? what
can we say about that to
he who publicly testified
on this NG and others he
turned bill in to the
law?

bill

Do the police have different PR's for encryption? or do they just flick a switch and it encrypts?

Would anyone be able to crack the encryption if they could get hold of a actual PR with the approprite chips etc installed?

People have told me that it is impossible to crack with a computer but i'm sure there must be a way however long it takes to find it. I think it is made more difficult by the fact it is not encryped as such to turn it into data or whatever you can actually almost make out some of the words sometimes. It seems to have changed the pitch of the persons voice somehow and it makes them sound like they have a peg on their nose for anyone who hasn't heard it.

There was a discussion a few months back about this. Someone brought up the fact that there were several misspelled words on Ian's web site. Some people seem to get REAL picky about spelling, punctuation, etc. where other's just want access to good software that lets them enjoy their hobbies more.

I know it only takes a second to run things through a spell checker before sending or posting it, but how do you know that "eavsdropper" is meant to be "eavesdropper" and not some sort of pun or acronym? Technically it should be "Eavesdropper" since it is being used as a proper noun and should always be capitalized. But "eavsdropper" is a HELL of a lot better than "eAvSdRoPpEr", "3av5dr0pp3r", or any of the other "cool shit" you see on the 'net.

Quit your bitchin' and let the guy do his thing the way he wants!

You can be sure that if Barry Goldwater were still around and active in the Senate, he never would have allowed the Communications Lobby to run roughshod over our rights as citizens. Goldwater was an enthusiastic supporter of legislation to improve amateur radio conditions, and was himself an active amateur operator. When US citizens are not allowed to tune their radios over "restricted" frequencies, it's a sad day.

Same is true with guns - when you have a bunch of gun "know-nothings" running the country, you can't expect anything but oppressive, knee-jerk responses. God forbid anyone should protect themselves when Big Brother will be there to help you in an hour or so...

Elect people who understand hobby radio concerns, and who understand firearms. If you don't, who do you think is to blame??

>
>Bob
>
Bob, it's a very "big deal" indeed when a US citizen's right to tune
his radio over its range is restricted by government knee-jerk
reaction to a powerful lobby. This is just a beginning to a growing
trend of oppression inspired by Big business to help them to make
money faster by legislating away your rights. Because of the
possibility of lost revenue, the Comm. Lobby did not want to placard
cell-phones with warnings regarding privacy, nor did they want to
spend the money necessary to encode the transmissions. It's far
easier to get your way with a bunch of ignorant, complacent
legislators - just look at the "progress" being made with gun control.

Please don't call Bud's posts "drivel". Everytime people do that to him
trouble always starts.

Macaroon wrote:

Hi,

Is your e-mail working yet?

I tried to tell you that I wanted it two days ago.

Frank

157. On glass antenna advice needed

Newsgroup: rec.radio.scanner
Date: 1999-08-03 00:00:00 UTC
From: Shaun Whitman <LSTRAIN@email.msn.com>
Message-ID: <ui9uXrf3#GA.357@cpmsnbbsa03>
Source record: 110994
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi,
Anyone have any reccomendations on which on the glass scanner antenna I should buy for the VHF-Hi area(specifically the railroad band). I've been thinking about just getting a dual band ham antenna rather than a wide band antenna.
I'd like it to be tuned as close to 161MHz as possible.
Anyone have any opinions or experiences on which brand and model to go with?

Thanks,
Shaun Whitman

It can be forbidden, but at least you can buy an unlocked frequency
scanner. Then it's up to you.
I can pick up cell phones (ETACS and Cordless) comms. On top of that many
cell phones now in Europe are GSM and in a very very short time it will be
"impossible" to pick 'em up. But, where's the fun ?

Moonbeam

Yeah, they can. It iss called Packet and Morse Code. You can decode
those two forms with a computer connected. There is also Pactor

Do you think that CELL phones are making people more rude? People have to tell cell phones users to turn off their CELL phones in Church, movie theatres, stage performances, etc. What do you think?

Also the fact that kids CANNOT live without a cell phone is quite distrubing. Why can't they live without one? Schools now-a-dasy have to confiscate these pesky electronic devices.

Ther was a write up in one of the Ohio newspapers about Motorola and
Ericcsson battling it out for MARCS. I think that the article sttated
that the system is costing more then is should. Also pick up a copy of
American Scannergram. Read the State column

The dual band ham antenna will do the job, but from the factory it will be cut a little long. You may want to shorten it slightly for optimum performance. This will be difficult to fine tune without a transmitter and wattmeter or antenna SWR analyzer.

Antenna Specialists offers several models of land mobile antenna that come tuned for this band. The AP-152.3 glass mount antenna covers 150-174 with 3 dBd gain. See www.antenna.com.

I have an excellent older Bearcat 300 w/original box, manual, and telescopic antenna. Was stored for years and looks brand new! Works the same. Super clean. This was the classic scanner that included service search. Has 50 memories channels. Heavy and built like a tank. Manufacture date 1985. Great starter scanner.

Covers: 30-50, 118-136, 144-174, 421-512 Mhz.

Looking to trade for portable SW receiver preferably w/SSB.

Will consider other trades also.

Thanks, Frank

There's a good website that explains proper care of Nicads:

http://www.cadex.com/cfm/index.cfm?Pg=166&Lp=55&Db=&Mo=

Takes a lot of the myth and mystery out of battery care.

Robert

Source record: 111017

I am only hearing half the conversation on some calls. Why? And I am not scanning just for the handset.

Sorry my friend, it AIN'T gonna happen. GSM is digital and your R1 doesn't stand a chance in hell of decoding it. Even if you could demod the pi/4 dqpsk, you'd still have the A5/1 cipher to break. If ya wants to listen to GSM, ya needs to join an intelligence agency. Cheers - MW

There are a couple of good general aviation and airport web pages out there. I'm sorry I don't have them here at my fingertips. Try some Web searches. In Broward Co. most of these are fairly active:

FLL = Ft. Laud. International
HWO = Hollywood (N. Perry)
PMP = Pompano Airpark
MIA = Miami
PBI = Palm Beach
BCT = Boca Raton
LNA = Lantana
FXE = Ft. Laud Executive

121.500 Emergency (universal freq, I put it in a priority channel)
120.200 FLL Tower
119.300 FLL Tower
128.600 HWO Approach Control (in FLL airspace)
133.775 FLL Appr.
118.100 FLL Appr.
126.050 FLL Departure Control
119.700 FLL, FXE, PMP Depart. (in FLL airspace)
120.900 FXE Tower
125.400 PMP Tower
132.100 HWO Tower
134.300 HWO Tower
118.300 MIA Tower
123.900 MIA Tower
124.850 MIA Appr.
120.500 MIA Appr.
125.750 MIA Appr.
125.500 MIA Depart.
119.450 MIA Depart.
119.100 PBI Tower
118.750 PBI Tower
124.600 PBI Appr.
125.200 PBI, BCT Appr.
128.300 PBI Depart.
127.350 PBI, BCT Depart.
122.800 BCT Tower

122.700 LNA Tower
119.850 FXE ATIS (recorded info - weather, etc?)
120.550 PMP ATIS (same...)
135.000 FLL ATIS (same...)
121.750 FXE Ground Control
127.950 FXE Clearance
121.400 FLL Gnd. Ctl.
121.700 FLL Gnd. Ctl.
128.400 FLL Clr.
121.900 PMP, PBI Gnd. Ctl. (they actually share this freq - have heard both)
120.450 HWO Gnd. Ctl.
127.500 MIA Gnd. Ctl.
121.800 MIA Gnd. Ctl.
135.350 MIA Clr.
120.350 MIA Clr.
121.600 PBI Gnd. Ctl. (not totally sure?)
119.150 MIA ATIS

The previous listing has been developed and verified with pretty good confidence through much searching and listening with the radio as well as through Web pages and books. The next list contains freqs that have a bit of activity on them but have not been pinned down as to category. Many of them may be air to air freqs.

119.4375
119.825
120.8875
124.875
130.225
130.775
131.525
132.200
132.2375
132.250
132.400
132.900
133.400
133.700
134.750
135.225
136.525

This is certainly not a complete list but it is a good start. Have fun and good luck...

I can't tell you why you are, but I can tell you that you're not picking up calls because phones are set wrong. You may be picking up an echo from the lower frequency, but analog in the US only exists in 856-whatever range :-)

Yep, FC database shows 500.3375 / 503.3375;
also a Local Govt ("PL") frequency of 46.56.

That's all that's listed...

Source record: 111029

As usual, Rich Wells has tested these models already. He does
a direct comparison of the two. This comment in particular
would make me opt for the 2042:

Commenting on the Comtel 225-
"Between the combination of the low 1st IF and wide FM receive
sensitivity, this radio is plagued almost throughout its entire
receive range with nearly exact copies of much of the FM broadcast
band, repeating over and over at about 40 MHz intervals.
There are other problems with TV and FM intermod but this broadcast
FM image problem is the worst. "

Please read the ENTIRE review before making any decisions. It is
still an excellent radio...

You can find Rich's review online at this link:

Right, the digital/analog dual-mode phones are dual-BAND. The analog mode is still at 800Mhz.

It's most likely an image

Apparently not all gas stations share Exxon's concerns. Here's a
close-up of a cardboard placard which I saw on the top of a gas pump
at the local Shell station. The placard clearly shows a cellular
phone, as if to suggest that customers use their cellular phones in
order to give suggesitons to Shell. One can only hope that the
customers will wait until after they have left the station before
making the call...

I agree with you that losing portions of our scanner coverage is lousy. And I liked Goldwater also. But I understand that in England, it's illegal to monitor police communications. So all is not lost. Yet. Until they digitize all the US police radio systems. Oh well, we can always monitor the McDonald's drive through.

THE CDF RADIO

-> Note: View this using a fixed font like Courier 10 for things to
line up.

The CDF radio plan uses several types of channels:

LOCAL (Dispatch)

There are several repeater frequencies designated for dispatch of fire
events. One repeater channel is assigned to each Ranger Unit. It is
used for dispatch, enroute, and arrival. Upon arrival the units switch
to a tactical channel.

COMMAND

There are two Command channels for the Incident Commander (IC) to talk
to Dispatch, other ICs, and to Air Attack. They don't seem to use the
command channels unless the fire is fairly large. For small fires they
often use the Local channel for command.

TACTICAL

When units arrive on the scene they go to a tactical channel to work
the fire. If they are sharing the fire with other agencies they
usually use the Fire White 1 channel (154.280) as a tactical channel.
Otherwise they select a channel from a pool of 19 CDF simplex tactical
channels. The pool consists of Local channel repeater input and
output frequencies from other Ranger units which are far enough away
that they won't disturb them. Each Ranger Unit area is assigned
several of these frequencies to use for fires in their area.

AIR ATTACK

There are several channels assigned for air-to-air and air-to-ground.

CDF LOCAL CHANNELS

151.160

2400 Redding (Shasta-Trinity)

151.175

3100 Perris, east (Riverside)
4400 San Andreas (Tuolumne-Calaveras)

Tac 18 Cruz MORGAN HILL INPUT

159.345
Tac 19 Cruz Yreka
159.360

Tac 20 thru 23 not assigned

CDF AIR CHANNELS

Red 151.220 Air to ground units
Blue 151.280 Air to air
Green 151.295 Air to air
Yellow 151.310 Air to air
Victor 122.925 AM Air to air for contract helicopters

A note about the "Victor" channel:

In aircraft terminology the VHF aircraft band (118-136) is called
"Victor", and the UHF aricraft band is called "Uniform". CDF air
units use the term "Victor" to distinguish the aircraft band from the
CDF fire band. "He's on Victor" means he is on the aircraft radio
rather than the CDF radio. In particular, CDF uses the term "Victor"
to mean the Fed/State Multicom frequency 122.925 which is used
exclusively for Federal and State forestry and environmental
protection traffic. They use Victor to talk to the "Call When Needed"
civilian, contract
helicopters which have the aircraft band but do not have the CDF
frequencies.

> 151.295
>
> 3400 San Luis Obispo (San Luis Obisbo)

San Luis Obispo uses 151.325 as their local net. Although I am sure the
offical way
is called "San Luis Obispo", everyone just says "San Luis" on the radio.

> 151.385
>
> 1100 Howard Forest (Mendocino)
> 3100 Perris, west (Riverside)
> 4300 Sanger (Fresno-Kings)

Headquarters for Fresno-Kings is located in Sanger while the command center
is located in
Fresno and is known as "Fresno". It moved into a new dispatch center 3-4
years ago. I am not
sure which one "Sanger" is suppose to reference.

That's true. Not only illegal to monitor police, but fire/EMS, any government frequency, cellular and cordless phones, etc. As I understand it the only things you can legally monitor are CB, amateur, broadcast, marine and aviation (there may be a couple others).
Technology has done far more to impact our monitoring ability than government restrictions, at least so far.

New ones are about $1100 in the US. Used ones seem to show up in
the $800 - $850 range, depending on age and condition, of course.

FRS Radios are a usefull tool/toy at family outings (forced family fun).
Great for keeping up with the kids and getting them to return when lunch is
ready. But as for the 2 mile range, only under ideal conditions.
Like in a flat open area like Kansas or the deserts of Arizona or even
central Kentucky in the dead of winter. The first 2 because there is
nothing to absorb the 70cm radio "waves", the last because after the leaves
fall off all the trees and the sap goes back down into the roots, the trees
stop being near perfect 70cm absortion devices.
Under summer conditions, in central and eastern Kentucky, you can get up to a
mile.

>reach SOMEONE at 911 ???
>
>Mike
This works in most areas. I have ran into an area (sout-central Ohio
around "Kings Island") where my trusty "Turned off" cell phone could not
bring up 911.
I am also told there are two types of cell providers, wireline(your
friendly local telco) and non-wireline(a provider other than your
local telco). 911 is "supposed" to alway work on the "wireline" cell
providers, but often will not on the "non-wireline" providers.
With that in mind, I have used an old motorola cell phone for 5 years
now to dial 911 about 2 per month. (there are a lot of wrecks/breakdowns
here in Kentucky). And (with the exception of that one area in Ohio)
have never had any problems calling 911. Now in Tennessee the
dispatcher wanted to know why the phone did not show up as "valid",
I told him that I had turned it off and was "surprised" when I could
reach 911.

IT is always a good idea to ground any and all outside antennas to provide
some protection in the even of a lightning strike. Grounding will NOT
prevent your radio from being fried, but can help reduce the risk of
structure fire (ie not burn down your house). Grounding can also help
reduce static (really more usefull on the HF bands for SWL but still usefull
on low VHF).
And alway, always disconnect your radios from your outside antennas when they
are not in use. I have a shorting system to ground mine, but that might be
over kill.

I was going to suggest NOAA, but I was not sure which frequency was being
used near him-the wrong one might confuse him worse.
At least 154.600 tends to have some traffic almost anywhere.
Thanks.

Pick up copies of Monitoring Times and Popular Communications magazines at a local book store or news stand. There are several PC radios on the market now. Check the ads for info and dealer names.

Try holding down the 2 and 9 buttons while turning the power on. If that doesn't work try the 2, 9 and MAN buttons.

What nonsense. You have 10,000 watt broadcast stations close enough to gas stations to light up fluorescent bulbs from the RF but you tell me a cell phone can create a problem. Go figure.

.....blah, blah, blah.

Burt, you bloomin' idjit! You seem as lonesome as Senator Robert Dole. Speaking of the discipline of loneliness, your country lives in terror of Bob "Boner" Dole's awful "erectile dysfunction" commercials. If you've resisted the urge to disable your television, you've probably noticed that Boner Dole's ads aren't the only Viagra spots on the tube. You may also have noticed an interesting difference between Viagra commercials starring Boner Dole and ones starring attractive white actors. In every other commercial, men beam at their freshly fucked wives, who beam right back. These couples are shown on a beach, watching a sunset, dancing--something, you know, romantic and boner-inducing. Boner Dole, on the other hand, is shown all alone in a deserted office, looking sad and abandoned, sitting at his desk staring out a window. Part of what makes Boner Dole's Viagra ads so hard to watch is how tragic they are. Why is this poor old man taking Viagra all alone in his office? Where's Liddy? Where's Burt? Where's AF2Y? Where's Enema King W4SCO? Where's anybody?

I am picking up plenty of PCS (?) transmissions in the 1850-2000 kHz range. I've been told by umpteen people that this is impossible. Then why the hell am I hearing cell phone calls in this range (with an AOR8200)? Could it be because people have their dual-mode PCS phones set on analog? Or are some PCS transmissions not purely "digital", as advertised?

shaggy

You are probably hearing 800 MHz analog cellular calls out of band due to
mixing products and images.

>800mhz....any help?

Possibly the most important is to get the antenna outside. Try standing
on the porch and comparing the signal strength (use a weather channel as a
gauge, it's continuously broadcasting and fairly consistent modulation).
If that works then look into a fairly simple antenna you can mount
outside. Be careful about using something like a mobile antenna, they
expect the car to supply a ground plane which you may not have.

Actually it's not legal to listen to aeronautical or maritime traffic,
either. The only thing you can legally listen to are CB, amateur, and
broadcast stations. Not to say that nobody listens, it's just kept low-key
over there. It's not a wise idea to walk around in public with a scanner
blaring away. But I wouldn't do that here in the US, either.

How am I supposed to know all this frequency junk? I am just a low life seasonal CDF firefighter (for the past ten years). I just passed on the information given to us by our King City headquarters.

Anyway CDF has been installing city and county local firefighting frequencies into their systems. Which is a great asset when it comes to mutual aid fire calls.

Sorry if I offended any of you with inaccurate information. Tell my bosses that they screwed up again.

You could _truthfully_ admit to being a total JACKASS. Not only do
you offer nothing of benefit here you spam the news group with your
ignorant lengthy sig file and then this time you repeated every thing
in HTLM.

A _JACKASS_ describes you quite accurately.

Well, the way I see it, people may put down the United States and call it the laughingstock but
in my opinion, there is no other country in the world like it. Here in the US, you can become anything
you wish to become,. be it an architect, rocket scientist, computer programmer, doctor...the list goes on.
As for me, I walk around with my scanner all the time, only got stopped once, and that was with a friend
of mine who's a cop. It seems to me, that our government is way too big, and the right hand doesn't know
what the left hand is doing. Old gray haired polititians either passing outdated legislation, or legislation about
things they don't understand. If I got stopped by a cop again, I'd remind him that the department he works
for is a public entity, paid for by public taxes, put in place by the public, to serve and protect the public.
I have great respect for the men in blue who put their lives on the line every day, don't get me wrong.
But once police start doing things in secret, (ie: communications) then there is something to worry about.
Basically, that's what it boils down to. People can blame the US for this and they can blame the US for
that, but as I said, in this country, you can become anything you want. That in itself, is an amazing thing.
It just seems funny to me, here are people in the newsgroups calling the USA a laughingstock, when in times
of need, who do other countries turn to for aid? The USA. We bailed Mexico out of their economic crisis.
We also sent a lot of aid to Kosovo. Our government could be better, but who's government couldn't be?
Our Constitution starts with three very important words: We The People.
Those are the largest words in the Constitution. If we as a people don't like what our government is doing
it is up to us to change it. A tagline in this newsgroup says: If voting mattered, Congress would make it
illegal. Well, voting matters. Here is something to think about. Here we are, with our Pentium computers,
our new BC-245 XLT's, a roof over our heads, 3 meals a day, maybe even some money in the bank
yet we have homeless people, children that go hungry. We The People, can do a lot better.
So before you go bashing the USA, look at what you have, read our Constitution and its amendments.
Read the Bill of Rights, and if you still don't like the USA, there is always the

option to leave.
Sorry for the rant....but I just had to say something.

Do a seller search on primecell on ebay. Battery packs listed for the
bc235, also fit bc245, at $14.95 + 4.50 shipping. At least a dozen
identical auctions ongoing, many with no bids.

I'm Canadian. We already have the gun regulation that you fear. Admitdly, it's not that terrible, but it could be looser. But what I don't understand Is why anyone would ban acsess to some frequency. Why ban acsess, when you can just scramble the channel. If you ban acsess to a frequency, and some one wants to get acsess to it bad enough they will.....

Bill,

Please direct any future discussion regarding Bill Cheeks' arrest to me via private e-mail. I don't want to waste space on the newsgroups with old news such as this. Also, please realize that the inflamatory remarks in a previous posting were made by someone else who added to my comments and were not made by me.
FYI, Bill and Cindy were arrested, handcuffed and taken to jail where they were allowed to post bond and be released. They have not (to the best of my knowledge) been convicted of any crime so far.

: Acappella Oldies
: Home page: http://members.aol.com/madonna826/index.html
: ----------

Several things...

1.you need to turn the squelch control up until the static stops if you
want the SCAN mode to work correctly.

2.if the SCAN control does not show you any other channels other than 1,
then you have the others locked out...

try this:
instead of SCAN, hit MAN 2 or 3 times-I suspect that you will see the
channels go up.
If so, for each channel other than 1, hit MAN until you get to it, then
hit L/O-you should see a symbol or word go off on the display(the BC-55,
which is similar to your unit, for example actually says "lock out" on the
display for each locked out channel.
BTW, to go directly to a channel-make sure you in MAN mode,hit a # from

1 to 10 and hit MAN

RVW means review-it lets you see what frequency is currently programmed in a channel.

for example-you have a frequency of 456.450 Mhz currently programmed in channel 1.

E means Enter

The LOCK switch or button locks the keypad to avoid accidental changes-if you hit the keys, and nothing happens(SCAN and MAN will work either way), then check the LOCK.

To program a frequency:

go to MAN mode, go to the channel you want to program and just key in the freq you want....remember to use the . key...when you are done hit E.
For example.....to enter a frequency of 154.600 Mhz...

hit MAN until you are on the channel you want to program
press 1 5 4 . 6 0 0
hit E

you are done.

Now all you need are frequencies for your area.

I think that the 60 is a 10 channel unit....when you step through the channels using MAN, then you'll see how many it has-the #'s will go up, and then go back to 1.

NOTE:remember that the BC-60 does NOT receive frequencies past 512 Mhz
So if some services are up on 800 Mhz frequencies, you won't hear them.

As for the unit having problems-if WX gave you NOAA weather, then most likely the scanner is fine..

If you still have problems after trying all of the above, or if you have other questions, just ASK!

Good luck.

Source record: 111136

Get the service manual and find the chip cap that bypasses
the audio amp's input to ground and remove it. This will provide
more "crisp" sound from the unit which will help in noisy conditions.

Ths mod works on *ANY* scanner..........

I'm trying to get a grip on the channel names and frequencies for CDF operations in San Bernardino and Riverside County. If anyone can help I'd be grateful.

Today I heard a fire in the unincorporated area of RICO just north of Lake Elsinore dispatched over 151.385 but had trouble finding TAC-2 which I had listed as 151.160.

I'm thinking that Police Call is not totally accurate. I could be misunderstanding it though.

If someone has a list they could share I'd appreciate it!!!

Forget the mag mount for any long term installation. Dirt will eventually
get under the magnet and the vehicle motion against the crud, over time,
will damage the paint.

I used a trunk lip mount and found that it worked fine for several years.
Eventually the rubber at the trunk rim didn't make a tight enough seal.
Rain would follow the coax into the trunk and did quite a job of rusting
the bottom of the trunk.

I didn't have any problems with a glass mount. I currently use 3/4" Hole
body mount NMO antennas.

The answer is simple. If the hybrid is balanced, i.e., the
phone line is terminated into a perfect 600 ohm line, you will
only hear one side of the conservation. If there is excessive return
loss, you will hear both sides of the conversation. The bottom line
is that if the service provider provides good equipment, you will
only hear one side of the conversation.

Hello,
I recently posted asking about a certain scanner and the price. Thanks to the advice here, I was not taken advantage of and I wanted to thank you all of you who helped.

In my quest for a scanner, I stumbled onto a second cousin who happens to have 5! scanners he would be willing to part with. I am looking for a scanner that will scan the cell phone range even though I have been told I will tire of it. I guess what I am asking is an expert opinion on the scanner and whether its worth the price or prices for that matter.

1. Uniden Bearcat BC144XL 59.00

2. Realistic PRO-2028 70.00

3. Uniden BearTracker 800 BCT7 139.00
This one seems to be a stand alone or a car mount.

4. Uniden 60XLT 49.00

5. Radio Shack PRO-28 $75.00
This one is neat just because he has a book from RS listing freq from around the coutry. 1993

Any information, opinions, things I should know, comments would be appreciated. I know you all get these questions all the time so thanks again for your patience.

Regards,
Wes

One mistake that you make is assuming that
since you pay taxes that you have influence.
The average taxpayer, in fact 90% of taxpayers,
only pay for less than half of all taxes. The
upper 10%, mostly business, pay the lions share.

Second, you do not write the checks. The politicians
do. The police are not here to help, only to keep order.
The oath that we in the military and in law enforcment
take is to defend the constitution, uphold the laws of
the land and obey the lawfully given orders of our superiors.
In fact the courts have ruled that the citizen can not
have a reasonable expectation of protection from the
police. Thus you can not sue an officer, his department
or the governmental body for his lack of protecting you.

Hello,

What frequency ranges does the BC-245XLT cover? I am considering
buying one and I heard it was one of the best.

Thanks,

JS

272. Re: A Dilemma: Encryption: "Right" to listen?

I get a kick out of the occasional news article or TV new piece that mentions the arrestees had "police scanners" in their possession, implying that it helped the crooks (usually drug dealers) ply their trade. Obviously, if they were arrested and had a scanner in their possession it DIDN'T help them much!

About the perceived "right" to listen in, I've been a scanner fan since before scanners (in the '50s my dad had all our AM radios tweaked up to receive LAPD in the 1700 kc range). I realize scanners can be entertaining, fun, helpful, dangerous, etc, depending on the use they're put to...but I don't really understand the "right" stuff.

Lots of our tax dollars go to things we don't all necessarily have a "right" to look too closely at (which, I suppose, is why we elect politicians and hire other officials to do the work we seem to want done).

I don't figure I have the right to walk in to a police "records division" and snoop around through other people's criminal records. Or see if the guys manning the nuclear launch machinery are taking too many coffee-and-doughnut breaks.

I would HOPE that scanner technology can keep up pretty well with two-way stuff...but if not, I'll have to look elsewhere for entertainment. Not the end of the world. There'll always be crooks and cops, always be good & bad in both groups, like the rest of society. My having a scanner or not isn't gonna make the smallest dent in it..

Not yet and I doubt he will be. However, that still doesn't
matter much when he has to travel cross country at his
expense and pay for travel, lodging, lawyers, etc., while
this is still pending. You can lose everything financially
and be in hock up to your eyeballs yet never be convicted!
This is why I'm not selling data slicer circuits. They have
legal uses but I'm not in a financial position to prove it.

Source record: 110807

You ARE listening to the tower. Some phones add some of the users speech to the earpiece (duplexing) to provide a more natural sound as you speak. Depending on the phone equipment on the other end, and also on the setup at the switch, you will hear the reverse channel as loud as the forward channel, much fainter, or not at all. It can vary widely system to system.

Source record: 110943

Range is one of those things that marketing guys force on engineers.
"Yo Myron, tell me how far those things will talk so I can put
something on the package besides: "neato walkie talkie!""

But seriously, they are quite a bit more useful than ANY walkie
talking every devised for the common man.

I use them all the time when I'm out with the woman shopping
(walmat/target/grocery stores) She can do her thing whilst I putz
around wherever. When I'm ready to bail, I giver her a call. VERY
HANDY.

Buy some, their quite useful.

Regards,

Gary

Source record: 110946

It should be easy to obtain Uniden products in the United States
or Canada. In the United States, please call the Uniden dealer locator
line at 1-800-297-1023 and select option five to find your closest
Uniden retailer. In Canada, call 1-800-USA-SCAN. There should
not have been any product outages. Our Uniden dealers who placed
their orders before June and were not on credit hold, received the Bearcat
245XLT Trunktracker scanners they ordered, exactly on time.
Most dealer orders from CEI on new products are usually delivered
in the US and Canada in two business days or less as described in
CEI Dealer News. Please visit our web site at http://www.usascan.com
and click on "CEI News" for the lastest dealer information on
Uniden products.

As a Uniden Master Distributor, we are responsible for making sure
your local scanner dealer has the products you want in stock. If your local
dealer
does not have the Uniden products you desire, please e-mail
to my attention at cei@usascan.com the store name, address, phone number and
name of the store manager. I will make sure a Communications
Electronics Account Executive calls on this dealer in less than 24 hours. If
it is
more convenient, fax +1-734-663-8888.

Customers worldwide purchasing Bearcat Trunktracker products usually
take advantage of CEI Trackpack E-values for maximum savings, express
freight and advanced customs clearance notification as described in CEI
News.

Once again, thank you for your interest in purchasing Uniden products.

>
Last evening I came up an accident. Being the kind hearted person tha I
am, I had my wife pull ou the cell phone and thought it time that she
learn how to deal with the police. After 30 seconds of mumbling, she
handed the phone to me, the "lady" dispatcher wanted to argue with us
regarding the lack of caller ID. I told her it was her choice it the
people in the accident got help as I had "rendered all the aid" that I
was going to. She shut up and took the information. Since the cell
copmanies made such a point over "community saftey", I suspect that
"turned off" cell phones will be allowed to connect (for 911) for a long
time. At least I hope so. While I can dig out the HT, and attempt
to bring up 911 in any os several area repeteaters, cell phone 911 has
wider coverage with very few dead spots. Plus, while most repeaters
allow 911, and it is very esy to bring it up, I do not know the "knock
down/hang up" codes for any repeater.

: I've been told by umpteen people that this is impossible. Then why the hell
: am I hearing cell phone calls in this range (with an AOR8200)? Could it be
: because people have their dual-mode PCS phones set on analog? Or are some
: PCS transmissions not purely "digital", as advertised?

If you are really hearing the conversations at 1.8 MHz, you are listening
to older portable phones (ie landline), not cell phones.... They haven't
manufactured anything in that range for years, I'm surprised any are
still operating, but they were very popular once, before they moved
everything to 42 MHz. Anyway, I think the base operated at 1.8 MHz,
and the headset at 42 MHz... What makes you sure that you are hearing
PCS?

I can't believe all this flap over total BS.

If anyone had READ the report on Cell Phones and gas stations,
they'd realize it was NEVER about RF. The issue was STRICTLY
the fact that customers would be holding and/or using a device with
a battery that was under load, and if it were dropped (probably a
fairly common occurance with trying to hold those pump nozels
without the 'lock' on them (another gov reg?)) and the battery,
being under load, could spark as the contacts were broken. This
was especially a concern as colder gas vapors would tend to be
on the ground, right where the cell phone would likely be dropped.

Even still, it was considered a remote possibility, but still ''a
possiblilty.

When I received the radio I went through four or five full
charge-discharge cycles. I don't run the volume too high either.
I think i just got a defective battery and wanted to see if any others
with the BC245XLT were seeing battery problems.
I guess it's just mine. Time for a warranty replacement.
thanks for the suggestions.

For Sale: Maxon SM-4150, VHF Mobile Radio

RADIO IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=140153956

16 channels
40 watt output
Includes power cable and Mic

Wideband Operation provides full bandwidth usage
PC programmable, with easy to use software features
Channel scan with dual level priority
CTCSS/DCS tone signalling blocks out unwanted calls
Busy channel lockout prevents transmission on a busy channel
Time out timer prevents excessive transmission on a channel
Fluorescent channel display with dual intensity
Radio comes programmed to your specs!

Get complete specs at http://www.maxonusa.com/products/prof/sm4000.htm

Radio is in excellent shape (9 out of 10 cosmetically) and is guaranteed to be in 100% working condition... Selling because I don't need it anymore. Please email with any questions. Good luck, and thanks for looking!

And additional thought. The shorter "waves" (ok wavelengths) allow the 70cm
signal to sneak into and out of fairly tightly shielded buildings.
Back when I used 70cm ham gear, my wife could always reach me in the
universities ham station. Built into a RF shielded room. You could not even
talk to someone in the parking lot (18/mile away) on 146.52, but on 70cm
she could hit the repeater whilst out shopping and I would receive it full
quiting in the "shack". There is a certain local bussines that must
moonlight as a rf test site because 146.52 will not get out into the parking
lot. But our (almost new) FRS get in and out with no problem.
(got some FRS because not all of my friends have their ham ticket..and while
I am willing to bend some rules while out in the woods, it would be poor form
in the city. Beside we can conduct "bussiness" without getting a bunch of
crap from other hams when we use the FR

304. A Dilemma: LAPD Digital Encryption

Newsgroup: rec.radio.scanner
Date: 1999-08-04 00:00:00 UTC
From: Glenn Highcove <highcove@hotmail.com>
Message-ID: <37a874d0$0$2487@news.sanjose1.level3.net>
Source record: 110967

As some of you may know, the Los Angeles Police Department has a contract with Motorola to build a trunked, digital encrypted system. What is unfortunate about this is that even with digital scanners that may someday be invented, the encryption will prevent any monitoring from taking place. This, for all intents and purposes, permanently puts an end to any hopes of monitoring them.

What is scary is that Los Angeles is a fairly cash-strapped city -- If we can afford it, those of you in large metropolitan areas may be next. This may be the start of a trend that threatens to end most law enforcement monitoring in this country. I'm not trying to panic you -- these are just my thoughts on this matter.

What can you do about it?

Well, at the web site below, I have made a highly streamlined process for easily sending off an e-mail to each Los Angeles city council member (or how ever many you want) with our thoughts on the matter.

http://www.geocities.com/CapitolHill/Embassy/1417/

Feel free to write your own letter, or to use the form letter on the site (which is also posted at the bottom of this e-mail). Please be courteous in your letters, and do NOT use abusive or threatening language -- we want to impress these people and bring them to our side, not scare them away. If we send enough e-mails, perhaps the city council will reconsider their decision (they may not have realized the implications of what they voted on). We have nothing to lose, and everything to gain. Please take 5 minutes of your day and do this for the community.

Glenn Highcove

/* I'm playing Devil's Advocate here */

Where does it say that we should be able to monitor police dispatch
radio traffic in real time?

We always tell the cell phone users that if conversation privacy is
important, they should use PCS. Now the police have decided that
their dispatch traffic is just that. They want to use encryption to
keep this information out of the hands of the public. Perhaps they're
getting tired of seeing scanners in suspected drug hideouts.

/* Devil's Advocate mode off */

In all seriousness, I doubt this can be won. Maybe we should ensure
that any request for recordings of dispatch traffic should be honored
after a certain time has elapsed (two to four hours later?).

I know, it takes a lot of fun out of scanning. Of course, any system
which is as widespread and distributed as police radios has got to
have some kind of widespread and simple coding going on. If it makes
it's way anywhere near Baltimore or DC, I'll have loads of fun looking
for a hack on it. That would be lots more fun than cell phone
reception or trunk tracking...

Thank you for your detailed answer.

I found something interesting on the WWW,
lead by a posting in a german scanner group,

http://www.rsd.de

They offer for download a IQ modulation simulation program.
This software will show how the signal is generated
fron data input until ready for transmit and how it will look
after reception.

Modulating a signal on a high frequency carrier is no longer
a straightforward process like it was at Marconi's time.
This is the reason why scanners cannot demodulate digital
transmissions. The scanners are only able to demodulate
AM, SSB, and FM, that's it.

Have a look at the new modulation conceps with the help
of the RS program, it is entertaining and educational.

"WINIQSIM" two versions, 4 MB and 7MB.
Select "download area"

The problem I see with the delayed monitoring is that it does nothing to help those of us that would like to know whether there's a string of robberies going on in our area right now, or for neighborhood watch groups that are often very helpful in spotting suspects that are currently being sought. The delay is just as bad as not hearing it at all.

I understand the need for encrypted communications -- but only for special surveillance. The dispatch should be open to the public -- I want to know whether anyone is actually responding to my call, or whether they'll get to it after their "Code 7". This is a police force, not a miliatary one. They are in my community, and are supported by my tax dollars -- don't I have a say on how those dollars are spent? The current radio system works fine -- this is just some sort of control freak response to a public that takes an interest in it's local PD. And to be honest, the only gawkers I have ever noticed at PD scenes have been either incidental bystanders or media. And I would much prefer the media cover it, and everyone stay at home and watch it, than have everyone and their father showing up because they heard all the sirens, but got no news coverage of it.

I'm not sure what the hell I'm hearing. The calls around 1949mHz have that usual "eep" noise near the end of the call (or the end of the transmission on that cell)

The calls around 1999mHz do not have that "cell" noise at all...they sound just like a regular phone call.

In all cases, I'm picking up both sides of the conversation, but one side is faint. The signals are coming in really clear (in most cases). I'm in an office building when I hear them, that's kinda why I thought they could be PCS phones, since everyone and their mom has a cell phone.

The beating of Rodney King (and other ALLEGED abuses of authority) should give citizens THE RIGHT to monitor public safety. I'm not trying to start any sort of "war" here. Police have a hard enough job as it is. However, police and such are civil servants. Our taxes pay their salaries. We have a right to know what's going on.

I think the police should have certain data encrypted channels for secure transmissions. I don't agree with taking away a citizen's right to monitor police activity in his or her neighborhood.

shaggy

> The problem I see with the delayed monitoring is that it does nothing to
> help those of us that would like to know whether there's a string of
> robberies going on in our area right now,

And it does everything to help prevent criminals from using technology to help them.

> or for neighborhood watch groups
> that are often very helpful in spotting suspects that are currently being
> sought.

Do you know that there are/will not be provisions for valid community watch groups to receive real/near-real time alerts from the authorities? What community watch group are you an active member in, or are you just desperately pulling 'justifications' out of your...?

> The delay is just as bad as not hearing it at all.

If you're a scanner geek who is crying over your little hobby being partially spoiled.

> I understand the need for encrypted communications -- but only for special
> surveillance.

I agree with you -- you only understand that one need. But extending some of your own logic, how are you going to be satisfied that any crypto is in fact only used for 'special surveillance?" If you hear crypto, you won't know if it is a major internal-affairs surveillance, or two cops passing 'nigger jokes' back & forth, will you?

> The dispatch should be open to the public -- I want to know
> whether anyone is actually responding to my call, or whether they'll get to
> it after their "Code 7".

If your call is so urgent, I doubt you'll have the time to play scanner geek while waiting for the response. Common-sense dictates you take any action you deem necessary prior to the arrival of emergency services anyway.

> This is a police force, not a miliatary one.

That's easy for you to say, while your fat ass is nestled on the couch with your scanners & computer at your side...

> They
> are in my community, and are supported by my tax dollars -- don't I have a
> say on how those dollars are spent?

Well, I suppose in one way or another, most criminals pay taxes too, so
their 'say' is just as valid as yours. In fact, perhaps you ought to take your
argument to the criminals of Los Angeles -- I'm sure they'll support you.

> The current radio system works fine --

At least it comes through just fine on your toys, you mean.

> this is just some sort of control freak response to a public that takes an
> interest in it's local PD.

Wow, that's very introspective of you...

I think the majority of the public would like police communications to be
secure.

> And to be honest, the only gawkers I have ever
> noticed at PD scenes have been either incidental bystanders or media.

So, while you've been gawking, the only other gawkers you've noticed have
been "bystanders" (and how, pray tell, do you recognize a 'gawker' from an
'incidental bystander?') or media...

> And I
> would much prefer the media cover it, and everyone stay at home and watch
> it, than have everyone and their father showing up because they heard all
> the sirens, but got no news coverage of it.

Great -- lobby LAPD to make provisions for the mainstream media to be able
to monitor some of the LAPD channels!

Face it -- you're just a 'scanner geek' (as am I) that's pouting because
sometime in the near future, you're going to lose a source of entertainment.

You have no 'rights' granted as a citizen nor taxpayer to be able to
mandate that a public agency not encrypt their radio communications as they see
fit. Just like the bank that holds the mortgage to your house can't snoop
around inside it tonight, nor can you walk into a government office building &
expect to be allowed to look through any desk or file cabinet, nor can you
legally eavesdrop on the FBI FIeld Office telephone switchboard.

I think I SHOULD have the right to listen to police communications (at least in my city) since my taxes help pay their salary. Whether I indeed have that right or not is up to your determination, I guess. I think if you payed my salary you'd have the right to listen to my phone calls. As a matter of fact, my employer DOES listen to my phone calls. And, since I like my job, I don't make any off-color jokes. And I don't appreciate your use of the word nigger either. It's an ugly word and was not necessary to make your point.

My understanding is that the Astro radio system will be capable of digital or analog mode transmission, but only selected radios (probably stuff like surveillance, narcotics, vice, etc) will have the more expensive/complex encryption option. Don't forget that there's a big difference between digital emission and digital encryption.

Thanks for a perfect example. These dispatchers are trained only to deal with the known, and the unfamiliar will confuse them every time. Also, lack of caller ID leaves a blank line on the form they fill out (on the computer), and their supervisor yells at them about that come review time. Public assistance???? Get real----- they are just another tax sink.

Re: Police Scramblers

Speech inversion is used in most cases.

A Speech Scrambler/Descrambler from Ramsey: http://ramseyelectronics.com model number SS-70A is a kit that you can build and learn all about this technology.

Before you use it to decode any communications other than your own, check all laws as it may be illegal.

Some high security communications needs are met with a combination of speech inversion and digital encryption technology that are touted as impossible to break with 300M rolling codes and add on security features that provide secure modes of talk well beyond the hacking ability of most intelligence agencies.

Good luck.

320. Scanning in MN

Newsgroup: rec.radio.scanner
Date: 1999-08-04 00:00:00 UTC
From: gbu@completeis.com
Message-ID: <MPG.121270a0173c9cba9896ad@news.onvoy.net>
Source record: 110983

I would like to get into scanning and had decided that the
BC245XLT was the perfect radio. Its ability to follow trunked systems and
the presence of a computer control port were central in my decision.

I found out today that there are no trunked systems in MN (with
the exception of the Bloomington PD) which would make the trunking
portion of the radio specious at best. I was also told that worst case
scenario it would take 2-3 years for any of the emergency service units
to implement a trunking system.

Now I am wondering, is the 245 the radio for me? Would I be
better off buying a cheaper scanner that does not have all the bells and
whistles of the 245? Is the 245 the cheapest radio with a PC port? How
functional is the port on the radio? Can it be used for anything other
than programming frequencies?

I am still leaning towards the 245 simply because it seems like a
great radio for the money even though it has some features that I will
likely not be using for some time. I am new to all of this however and
was hoping for some input from others who knows more about this than I
(which is just about everyone)!

Thanks

>help them.
>

Tired argument, in my opinion. I DO think that this is not an issue of anyone's "right to know", and that technological progress is what it has always been, unstoppable.
But criminals use technology to their advantage every day in every way they can.
They use phones, cars, guns, cameras, VCRs, cellular phones, two-way business radios, scanners, TVs, any number of things that the REST of us use legally and normally.
If the encryption movement is fueled only by the desire to keep criminals from hearing the "good guys", that's pretty weak, but it STILL has nothing to do with this idea that it's anyone's "right" to be in on everything that is said by the police.

Hey gang!

I would just like to take this chance to thank everybody for the response and feedback we have received on WinScan. Because of our delay with replication, we released a shareware version. Because of the shareware version, we found some previously undiscovered errors in the program (things we may have missed or our beta testers may have missed). Because of you, WinScan is a solid program. We will be posting an updated shareware release tonight on our site (sometime after 8:00 pm MST)and the program is on target (with the changes) for a release on Monday. We will keep you all posted on the progress and developments as they occur.

Once again, thank you all for your support and feedback.

Warmest Regards,

Adam Goldman

>cant be 900mhz cordless from across town!
>
Date code 7A4 (July 1994) was the last to be able to do the keypad trick. You will not see frequencies displayed between 870-894 MHz on date codes after 7A4. You will receive images of cell frequencies in the 900 MHz region as you have already found out.
Hope that helps !

I'm looking for an on-line frequency database. I found one a couple of weeks ago, but I can't find the link again.

If it makes any difference, I'm specifically looking for Western Washington area. Thanks!

I believe the only one of the bunch that covers 800 MHz at all is the
BCT7 and to my knowledge it cannot be modified for cell coverage. Price
seems high on that one too; it really isn't a very good radio.
Regaarding the freq book, things change rapidly in this area. A book
from 1993 would be worthless today, completely outdated.

Cross-posted to: alt.radio.scanner,rec.radio.scanner,dfw.forsale

For Sale

RS Pro-62 200 Channel AM/FM Scanner with Ni-cads Batteries
$120.00

I'm in the Dallas/Fort Worth Area or willing
to mail COD.

E-mail me for more Info or if interested

PRO-62 Programmable Scanner
$120.00

--- Features ---

Frequency Range:
30-54, 118-136.975 AM, 137-174, 380-512,
806-824, 849-869, 894-960MHz

Triple Conversion Superheterodyne Tuning -
virtually eliminates intermediate frequency imaging
interference (common to 800 MHz dual conversion receivers)
so you can clearly hear only the scanner's received frequency.

Hyperscan - searches through unstored frequencies at 50
steps per second or scans stored channels at 25 channels
per second.

Monitor Memory - lets you temporarily save up to ten
frequencies you find during a frequency search so you
can decide later if you want to store any of them into
permanent channels.

Two-Second Scan Delay - delays scanning for about two seconds
before moving to another channel so you can hear more replies.

Ten Channel Storage Banks - let you store 20 channels in each
of 10 storage banks to group frequencies so you can easily
identify calls.

Liquid-Crystal Display - shows the selected channel and
frequency and the selected modes.

Memory Backup - protects the stations stored in your
scanner's memory for up to 1 hour without the battery.

Lockout Function - lets you set your scanner to skip over
specified channels.

Keylock - prevents you from accidentally changing the
scanner's programming.

Priority Channel - lets you designate a channel to
be scanned every two seconds so you do not miss
important calls.

AM/FM Mode - automatically selects the most common
reception type for the band you are scanning, and
lets you override the default selection.

Battery-Saving Circuit - draws only 40% of the normal power.

Optional Power Sources - let you power the scanner from
internal batteries, standard AC power, or from your
vehicle's battery.

Ni-Cad Battery Charging Circuit - lets you recharge
nickel-cadmium batteries while they are inside the
battery compartment.

--- Basic Specifications ---

Scanning Rate ..... 25 Channels/Sec.
Search Rate ..... 50 Steps/Sec.
Priority Sampling ..... 2 seconds
Delay Time ..... 2 seconds
Antenna Impedance ..... 50 ohms
Power Requirement ..... +9 VDC, 6 AA batteries or a suitable
adapter (negative ground only)
Current Drain ..... 95 mA
Dimensions ..... 5.75H x 2.25W x 1.75D inches
Weight ..... Approx. 8.8 oz (250g)
(w/out ant. and batt.)

>
>What frequency ranges does the BC-245XLT cover? I am considering
>buying one and I heard it was one of the best.
>

There really is no such thing as an overall "best" scanner because there in no single model that does everything.
Do you want to track public safety trunked radio systems? Well, the 245XLT is the best, at least in a unit that is fully independent and fully functional without being hooked to a computer.
Do you want to monitor military aircraft? Then the 245XLT isn't suitable at all because it doesn't receive the UHF military airband from 225-400MHz and you can't select AM receive mode in the 138-144MHz range.
How about shortwave coverage? Is that important to you? If so, then you have to get an ICOM, AOR, Yupiteru or one of the other high-end receivers.
I think you get my drift by now.
For more information on the BC245XLT go to http://www.strongsignals.net and read the BC245XLT review and FAQ posted there.

344. My 2 cents on EDACS Scanning...

Newsgroup: rec.radio.scanner
Date: 1999-08-05 00:00:00 UTC
From: EDatBCFR@aol.com
Message-ID: <7ob118$h8b$1@nnrp1.deja.com>
Source record: 110815

OK, I have been reading about scanners, EDACS, BC245's, et al, blah blah....

The set up that I am using and will continue to use is the two scanners and Etrunker v3.7g. I use one regular old scanner with 800 mhz to monitor the data channel and I use a BC895XLT in remote mode so that the computer conrtrols it. I STRONGLY reccomend this setup as one of the BEST I have ever seen. Please go and find a copy of Etrunk and read the documentation that is with it. I will not try to go over all of it here. I will list a few reasons that I like Etrunker so much:

Etrunker
Has on screen display (your computer) that shows ALL activity on the site you are monitoring. You can instantly see who is talking and on what freq or talk group.

You can color code talk groups so you can easily recognize them. For example I have all law enforcement channels in blue, fire & rescue in red, misc services in cyan, etc...

You can color code radios in the system too. Just as above, law enforcement in blue, etc ... All dispatch consoles I have in yellow.

You can add titles to the talk groups and to the radios too. So, what I see on my screen is a list of frequencies, active talk group, and radio id. It looks something like this:

866.3250 55 XYZ PATROL WEST 139 008B 009C G XYZ UNIT 44

866.3250 is the freq that would be sent to the scanner to monitor
55 is the priority of the talk group or unit for Etrunk to scan
XYZ PATROL WEST is the title of the talk group
139 is the decimal talk group id number
008B is the hex talk group id number
009C is the hex logical id number of the radio xmitting on the talk grp
G indicates this is a group call, I would be an individual call
XYZ UNIT 44 is the title assigned to the logical id of that radio

You can follow all Individual calls and all telephone interconnects that occur on the system.

You can log any new freq, talk groups, logical ids as they become active on the system.

Bottom line: If you are REALLY SERIOUS about monitoring an EDACS system then you owe it to yourself to at least INVESTIGATE and learn about this method, it blows the doors off of the BC245. Of course you should

make the selection that BEST suits YOUR needs.

If you have any questions about this then you can email me at EDatBCFR@aol.com. Please put EDACS in the subject line and I tend to delete any mail that is not obviously for me (spams and such).

The system you are using is very powerful and was the inspiration
for the 245 but I think you are being a little 'sensitive' to the new
kid on the block. How much $ do you need to invest for a setup
like yours? Is is portable? Can you walk freely from room to
room and follow the conversations? What do you do when the
power goes out? Not knocking your setup at all, just pointing
out that no one system is perfect. I've got many scanners and
no one setup can replace them. Don't limit yourself!

He who dies with the most toys wins. So far, Rich Wells has
a strong lead. I've lost sight of him at this point... ;-)

You have it backward. If we start treating rights as privileges, then we retain no rights except the ones the government finds convenient to let us keep for a while. Privileges can be revoked, rights cannot.

Tim Tyler wrote in message <37A89F9B.AEB6E8E3@mich.com>...
>> The problem I see with the delayed monitoring is that it does nothing to
>> help those of us that would like to know whether there's a string of
>> robberies going on in our area right now,
>
> And it does everything to help prevent criminals from using technology
to
>help them.

There are no official statistics of any kind that indicate any common use by criminals of scanners to help them. The occasional finding of police receivers in some busts is pretty rare, and not enough to justify closing all public access to police communications.

>> I understand the need for encrypted communications -- but only for
special
>> surveillance.
>
> I agree with you -- you only understand that one need. But extending
some
>of your own logic, how are you going to be satisfied that any crypto is in

>only used for 'special surveillance?" If you hear crypto, you won't know
if it
>is a major internal-affairs surveillance, or two cops passing 'nigger
jokes'
>back & forth, will you?

Another good reason not to allow full-time encryption. Look what happened with the "secret" MDT traffic around the time of the Rodney King incident. We found out what LA cops were REALLY like on the job, and the taxpayers and citizens of this country have an absolute right to that sort of information.

>> This is a police force, not a miliatary one.
>
> That's easy for you to say, while your fat ass is nestled on the couch
with
>your scanners & computer at your side...

Has nothing to do with viewpoint. The civilian police are not the military, legally, constitutionally, or in any other way.

>> They
>> are in my community, and are supported by my tax dollars -- don't I have
a
>> say on how those dollars are spent?

>
> Well, I suppose in one way or another, most criminals pay taxes too, so
>their 'say' is just as valid as yours. In fact, perhaps you ought to take
your
>argument to the criminals of Los Angeles -- I'm sure they'll support you.

That is one of the stupidest responses I've ever heard. Do you mean to say that We the People have no right at all to influence the way our "representatives" spend OUR tax money? Bull.

>I think the majority of the public would like police communications to be
>secure.

Please cite your references. The majority of the public don't have a clue about what police do, their duties, the legal obligations of the police vis-a-vis citizens' constitutional rights, or anything else having to do with law enforcement. If the police chief went on TV tomorrow and said that illegally parked cars cause children to be killed, the "majority" would be hounding their legislators and the police to DO SOMETHING about the parked car threat - maybe even to declare a federally-funded War on Parking.

In short, what the "majority of the public" think they want is irrelevant to genuine public safety.

> Great -- lobby LAPD to make provisions for the mainstream media to be
able
>to monitor some of the LAPD channels!

Great idea! Let's let the police decide who may legitimately have information, and let those police-selected for-profit "news" organizations decide what the rest of us may be allowed to know.

> You have no 'rights' granted as a citizen nor taxpayer to be able to
>mandate that a public agency not encrypt their radio communications as they
see
>fit. Just like the bank that holds the mortgage to your house can't snoop
>around inside it tonight, nor can you walk into a government office
building &
>expect to be allowed to look through any desk or file cabinet, nor can you

Apples and oranges. Some communities have "sunshine laws" that might just provide such protection from excessive governmental secrecy.

Glenn, when asked EXACTLY what years your amateur radio license(s)
were valid & under what callsigns, you NEVER answered the question.

In the 1970's, a novice license was valid for 1 year & NOT renewable.
Even though you may feel you had a 10 year novice license issued to you,
the truth is that the 10 year license did not come until the middle (or
late 1980's??)!!!!!!!

BTW - I have NEVER been booted from an ISP, & have had this current ISP
for nearly a year. You on the other had have been booted from YOUR
ISP for trolling for young boys on newsgroups & attempting to harass myself
and others.

>the progress and developments as they occur.

Hi there, thanks for the Trial Version, I have already ordered your
software and can't wait to get the official release version.

While going through the software I found a couple things in which I
think need some work. or tweeking. (some of these may be the bugs you
made mention to in your posting)

1) I would like the ability to cut and paste frequencies from a
website into your program. (Ie highlight a frequency on a website
copy it to the clipboard, click on the channel bank I want it to go
into and be able to Control-V Pate it into Winscan. This will
eliminate a lot of typos I can see myself making.

2) When exiting the program the Speed Enhancement feature reverts to
the off position. I would like that to revert back to the position of
ON when I restart the program.

3) In tunking mode, the Alpha tags are sometimes displayed and
sometimes not displayed. All my Talkgroups are programmed with Alpha
tags. So in my main police Talkgroup the ID of 240 is Diplayed with
no Alpha tags, but then the next transmision also on the same 240
talkgroup will say on the screen "Police Department Main Dispatch"
This happens in both the main view window and the quickview screen.

5) The Ability to Merge 2 APF or Frequinecy lists together. And by
this I mean lets say I have a freind who has his radio programmed for
the Hartford Police in his bank 1 through 30, I want to be able to
take his file and add his freqs to mine, however my banks 1-30 are
used and would want to import his data but have it appear in my banks
31 - 60. This leaving my already programmed banks 1 - 30 alone.

And finally this one does not have anything to do with your software, but the thing I would love to be able to is be able to broadcast my scanner audio over the internet with something like Shoutcast but I would like to do it so that the Frequency you are hearing the Alpha tag is being shown to the listener. (So they know what they are hearing) That would be the ultimate, Imagine many scanner listeners like me being able to listen to their local town no matter where they are in the world.

Thanks for the great program, after I play with it more if I find anything else unusual I will let you know.

Scott

What you don't understand is that Piero is in Brazil. That's why the shipping was so much. It cost me $30+ to ship a YB400 to Piero, and it is a lot lighter than most laptop computers. BTW, Piero paid me for the YB400 with no problems, just as promised.

That's right, however, a consensus around here seems to be that the number is growing. There's no *official statistics* of how police are aided by citizens/community watch groups with scanners either, though certainly it happens.

> The occasional finding of police
> receivers in some busts is pretty rare,

Gee, are you the same guy that just wrote there weren't any official statistics regarding the matter?!

But if it is indeed rare, is it rare that crooks use scanners, or is it rare that crooks with scanners get caught?! I assure you, that's a rhetorical question -- I know you & I don't have the answer to it!

> and not enough to justify closing
> all public access to police communications.

Departments going ASTRO or digital EDACS don't just do it to negate people with scanners. You sure haven't demonstrated why you or anyone have the right to access "police communications," either.

Not at all, nor does your response make any contextual sense...

> Look what happened
> with the "secret" MDT traffic around the time of the Rodney King incident.
> We found out what LA cops were REALLY like on the job, and the taxpayers and
> citizens of this country have an absolute right to that sort of information.

Excellent example -- thank you! LAPD command officers (not the media, not some scanner geek...) observed the 'Gorillas in the mist,' etc. MDT traffic and took the appropriate action. We know of the example you cite thanks to the integrity of LAPD, not thanks to some member of the public.

> >> This is a police force, not a miliatary one.

> legally, constitutionally, or in any other way.

But like the military, they have the right, obligation and DUTY to protect themselves as they protect us. That includes using technology to improve field communications, and increase operational security by securing communications as they see fit. LAPD comes under attack more frequently than the US military does, and I'd argue that many LAPD radio channels come pretty close to sounding like an Army combat net radio channel at times.

> provide such protection from excessive governmental secrecy.

Well I would hope so. But thankfully, just a few sad people such as
yourself seem to view law enforcement digital encoding/encryption as being
"excessive governmental secrecy." I doubt the courts would agree, and I think
even Glen Highcove realizes his only hope (besides therapy & getting out more)
is to use some misinformation against the city council, rather than take the
issue to court & actually have to defend his comments in that type of forum.

>jokes'
>>back & forth, will you?

That question doesn't lead anywhere..."how are you going to be satisfied..?"
Who's going to decide who needs to be "satisfied." Kind of implies that
encryption can NEVER be justified, since someone, somewhere, might not be
satisfied with what's being encrypted.

>Another good reason not to allow full-time encryption. Look what happened
>with the "secret" MDT traffic around the time of the Rodney King incident.
>We found out what LA cops were REALLY like on the job,

You mean SOME LA cops. Who found the MDT traffic? Other LAPD personnel.
Who made the info public? Other LAPD personnel. And MDT messages are now
routinely audited both at the area level and citywide, with offending
officers receiving anything from verbal warnings to written reprimands to
suspensions to dismissal.
>
>>> They
>>> are in my community, and are supported by my tax dollars -- don't I have
>a
>>> say on how those dollars are spent?
>>

Sure you do...you're saying it here, you can write letters, make phone
calls, vote, sue...

Another aspect that would tend to argue in favor of encryption of ALL police
radio traffic is that victims' and "suspects'" and witnesses' right to
privacy could be considered invaded every time their name or address is
broadcast over the open airwaves. For example, up until the late 1960's
(for LAPD anyway, when they halted the practice by order of then-chief Tom
Reddin), officers would routinely run criminal record checks by radio, using
only a name and birthdate. After a quick check by a clerk in R&I, the radio

operator would then broadcast something like "Suspect John Jones has a robbery, burglary, other felony and misdemeanor record." I imagine every John Jones would have been mightily surprised and upset to hear about THAT.

And today, with the heightened awareness and enforcement of domestic violence codes, both victims and suspects names and addresses may be transmitted by MDT if not by voice (heaven forbid), and then disseminated over the internet to almost literally the whole world. That's why a lot of that stuff goes by landline in most enlightened agencies. We going to tap their phone calls, too?

Same thing for names or addresses of witnesses to major crimes. Seems to me that a lot of people would hesitate or refuse to call for police help, or report a serious incident, if they became aware that their name, address or other info was IMMEDIATELY available to anyone and everyone who felt THEY had the right to be "satisfied" about how their tax dollars were spent.

Doesn't bother me in the least that the cops may be surveilling a felony suspect using a couple of my tax dollars without getting my permission or announcing it to my neighborhood watch group. Or if they take a couple extra coffee breaks.

Harry

Well, the FCC online is a little like ScannerbaseXE, though not as
user-friendly. At
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

And Percon's is usable at
http://www.perconcorp.com/resource/resource.htm#search

Is there a problem with ScannerbaseXE...if so, I KNOW the people there want
to know about it while it's in the "beta-test" mode...

Are you near a microwave tower used to transmit long distance calls? May be possible you are hearing an image from that. It's not widely know but intercepting calls from a microwave tower is not all that hard to do!

It is not at all hard to intercept the point to point microwave telco
data. But very little (if any) is straight AM. All that I have seen
was multiplexed with a lot of other calls/data/junk.

Err I feel that I am making a big mistake here, but in 1973 a Novice license
was good for 2 years and not directly renewable,(ie you had to wait either
6months or a year) in 1974 (or maybe 75) they changed it to 1 year renewable
and phased out the "WN" and "KN" call signs. I was able to renew a formerly
non-renewable, but lost that nice WN4xxx callsign, although a few somehow
managed to keep theirs.
As to the rest of your disagreement, I have no opininion, just wanted to set
the record "straight". I still have all my old/expired licenses.
Followup flames will be kill filed.

Jose, you read my mind.... I didn't think about that, but he may be
picking up something microwave. It may not even be phone, it might be
two-way wireless, all our 800mhz trunked networks down here in south
mississippi are controlled via a microwave link in the 3.2ghz range
some might even be lower. I am not sure where the telco is using theirs
though. I would of thought it was higher than 1.2ghz, i would of thought
10ghz or higher? I have a friend at bellsouth, I'll ask him just so I
know..

: Those little hand-held toys don't have no frontend.
: Image reception is very common with el cheapo's scanners.
: W.

Dude, he's using an AOR 8200, its triple conversion and by no
means an "el cheapo" scanner. Its not even classified as a
scanner, its a communications receiver .5khz to 2000mhz and
the US cost is about $550. I know, I want one!

I do agree though, i don't think he is hearing PCS, I am with
DigiPH PCS, and our GSM phones can NOT be picked up, its all
100% digital transport. He's hearing analog images in the
cellular band. They can also be picked up quite easly in the
895-915mhz and 945-970mhz too..

: 2-9-lockout method? My date code is (1A6) I am receiving calls and they
: cant be 900mhz cordless from across town!
:
:
:
: Thanks
: Fred

I have the pro51 too.. mine will not go into the cellular band with the keyboard entry...

FYI though, what you are hearing are actual cellphone calls that are in the 800mhz range. By scanning between 896.1000 to 915.0000 you should be able to find all types of calls. No mod required, and any scanner will be able to receive these calls there...

some scanners that go higher will have improvements in the 950-970mhz range. I have a Yeasu VX1R that goes in that range and it picks stuff up a lot more in 950 to 970mhz. enjoy.

>police activity in his or her neighborhood.

I can't disagree with you morally. The problem is that we don't have
any laws, regulations, or polices which can be cited to stop LAPD from
doing this.

Please understand, I was playing devil's advocate in my previous post.
I believe a city whose police department uses encoding or encryption
to keep it's radio traffic out of the public ear is headed for real
trouble. Although it's probably true that the police are free to use
encrypted communications on dispatch, I think it's a dangerous idea.

Incidents such as Rodney King's beating are unusual in that he had
everything going for him: He had video, MDT logs, and medical
evidence. How many others have been beaten like he was but didn't
have the same high quality evidence? The blue line of silence is a
powerful force. I don't think we'll ever know for sure.

At the same time I'd like to emphasize that it is our right and
possibly even our duty to make the effort to decode or decrypt these
communications. Just as it's true that there is no law against a
police department using encoding or encryption, there is also no law
(yet) to prevent us from monitoring them anyway.

Those are your rights. Guard them carefully!

: Jamie
: jamieb@bitstorm.net

Well NOLA PD is on a GE EDACS so I guess you bought the RIGHT scanner.
sorry I wish I had freqs.. Some of the surrounding PD's and SO's in
those perishes are using these freqs.

860.7375
859.7375
858.7375
857.7375
856.7375
855.7375

I think Slidell Police are using these along with others...
Isn't that scanner suppose to be able to dialup to a tollfree number
and download 100 freqs according to zipcode or something like that???
well anyhow just do searches in the 850 to 866mhz and you'll find a
lot of stuff to listen too....

SO we should just sit back and trust them? No, this country is founded upon the principle that what the government does IS the peoples' business, a principle that government repeatedly tries to circumvent. Eternal vigilance is the price of liberty. One reason the Holocaust could take place was that German culture emphasizes discipline and order, and when people were told they didn't need to know how their tax money was being spent behind the walls of the camps, they accepted that answer. Your statement puts you in conflict with the Supreme COurt when they denied Nixon's claims of executive privilege regarding the Watergate tapes, denies people the standing to investigate things like the Tuskegee experiment, etc.

> I don't figure I have the right to walk in to a police "records division"
> and snoop around through other people's criminal records.

Oh? Then what exactly are all the "Megan's Laws" all about? Apparently, if people care enough, criminal records ARE disseminated to the community at large. Take someone's name and DOb, and you'd be amazed what is freely and legally available.

> Or see if the
> guys manning the nuclear launch machinery are taking too many
> coffee-and-doughnut breaks.

Oh, but we do have the right to know that, as has been established by countless investigative journalism pieces on such subjects. A recent news story regarding an Air Force officer with religious objections to long isolated coed duty in the silos gave us quite a detailed look at how those missile control rooms operate.

>My scanner is an AOR 8200, not an "el cheapo" by any means (not the greatest
>either...)

Here are the facts of life in the RF design world: You can have
bandwidth, you can have sensitivity, you can have IMD performance
--pick any two, but you can't have all three unless you inject some
serious design effort (along with "cubic dollars" and "cubic"
complexity) in to the equation.

The AOR 8200 was designed to be a consumer toy. That's all. It's an
expensive consumer toy to be sure, but that's all it is. You haven't
spend any real money yet. Want proof? Put your AOR 8200 on
short-wave. Listen to a SSB signal. Now go get a ham radio
transceiver. Listen to that same signal. Hear the difference? That
difference is oscillator phase noise, internal amplifier noise, IMD,
and other effects.

The difference between the shortwave receiver and your AOR is that the
shortwave receiver only has to cover a limited range of frequencies,
it doesn't have to be as sensitive, and it can afford features such as
switchable octave filters to keep second order IMD in check. That
same bank of switchable octave filters in the AOR would increase the
size and complexity of your radio so much that it would have been cost
prohibitive to market to all but the most rabid of scanner nuts.

Even in the best of circumstances, the dynamic range in that scanner
is maybe 70 to 80 dB. A good dedicated shortwave receiver can manage
a dynamic range of 100 dB or more. That kind of performance is
possible across the entire spectrum your AOR covers, but it will cost
you some very serious money to do it.

So, no, your AOR 8200 is not an "el cheapo" unit. But it does have
limits and compromises. C'est La Vie...

Ummm. Two problems: first, most 2 GHz industrial microwave licensees were moved to higher bands by the FCC to make way for PCS. Second, most microwave radios transmit a substantial baseband (at least 96 channels) using FM. The channels are pretty wide-band, starting around 2 MHz wide and going up from there. If you took an ordinary scanner, you might hear the orderwire (a sort of link intercom), but the rest of the signals would look like a long series of FM subcarriers. Unless you had a very wide baseband output from your discriminator (and it had better be a VERY linear discriminator at that), monitoring a signal like that would be out of the question.

Lastly, the vast majority of microwave users have been upgrading to digital T-1 gear. We still use an FDM network on 6 GHz at work, but its days are numbered. We do not use it for telephone trunks...

I don't know if you've listened to police comms lately, but there are still law enforcement agencies that do run criminal records over the air, such as the CHP (California Highway Patrol). And what do you think a wants and warrants check is (which always goes over the air)? But guess what -- that's supposed to be public knowledge. That's why anyone applying for a job with a felony on their record has to disclose it -- it's for the good and protection of the public. If there's a twice convicted rapist cruising my neighborhood, I damn well want to know about it -- wouldn't you? That's why we have a listing of sex offenders here in Calfornia under Megan's Law -- It's our right. It's public knowledge, as criminal records are always available to the public, at least in many states. So anything we hear regarding a suspect's record is what we could have found out anyway. Here in California, it would cost me $15 if I wanted to look up your criminal record, and here's the site to prove it: http://www.deepdata.com/index.html Furthermore, your arguments take issue with all of scanning. If we're worried about privacy issues with police comms, who is to say we should be able to listen to anything else? Even aviation, according to your reasoning-- Hell, what business do we have knowing whether Alaka 749 is at 10,000 feet or not, right? That might be violating the right of the pilot to do his job without the silent criticism of thousands of scannists (this is me being sarcastic, for all of you quick browsers).

The fact is, everything is subjective. By arguing that anything can be debated or rationalized, you are ignoring the reasonable midpoint. I have no wish to violate victim's rights. And you're right, there is something I can do -- I can raise this as a public issue, and ask others to help me act on it by going to this site: http://www.geocities.com/CapitolHill/Embassy/1417/

Everyone on this group always whines about losing the cellular part of the band, not being able to scan mobile in certain states, cities going digital, etc. Well, DO SOMETHING ABOUT IT! This is a free country, of the people, by the people, for the people. We are the government, and what we say goes. It just takes some arguing and action. So make my site your first act, help nip this thing in the bud, and use LA as a precedent for more community involvement in our communications.

We are offering a free acrylic desk stand with every BC245XLT purchased.

You will agree that it gives one the true "pucker factor" when a small radio or HT falls over! Several of our customers are using these and like them. We also sell these outright for $5, pictures on our website if interested.

This offer is for a limited time, while supplies last.

Actually Kent the thread started in alt.fan.john.mackey but John-Bowl Mackey
added
rec.radio.scanner,rec.radio.amateur.misc,rec.radio.swap to the distribution
list. We all edit our replies to only be distributed to alt.fan.john.mackey
but John-Bowl keeps changing them. He gets some sick kick out of cross
posting his trash across USENET. Go figure.

Well, that's all nice and well for your personal preferences, but some of us have spent a nice percentage of our income on this hobby. Unlike you, some of us don't want and don't feel like we have to walk away from this hobby so easily, especially considering that it's at our expense (that $51 million would be much better spent on schools, considering the sad state the LAUSD is in). And BTW, you CAN access those police (albeit in a somewhat filtered form) records you mention, if you go through the proper channels. Go here for details: http://www.deepdata.com/index.html

So please, feel free to give up your rights as a citizen and resident, but please don't hinder the rest of us in our efforts to participate in our government and it's affairs.

Let's be careful not to go too far in the rights vs. laws argument. It is indeed a violation of U.S. federal law to attempt to decrypt any scrambled communication. That prohibition is part of ECPA, found in Title 18 of the United States Code.

No, they don't, but that is admittedly a strong selling point. Why do you
suppose Motorola's "Privacy Plus" is such a big seller? Hint - it's in the
name.

>> >, or two cops passing 'nigger jokes'
>> >back & forth, will you?
>>
>> Another good reason not to allow full-time encryption.
>
> Not at all, nor does your response make any contextual sense...

Explain. Bad cops who act in secret, like anyone else who is certain of
escaping detection, will do bad things. There should be civilian oversight
of police departments, and the easiest way to oversee a broad stretch of
what the police are doing is monitoring of their communications. Monitoring
is not the same as disclosure. If 10 million people listen to a police
channel without violating Federal eavesdropping laws, what harm has been
done to communication security? None! Nobody is disclosing anything, or
acting on it for profit.

>> Look what happened
>> with the "secret" MDT traffic around the time of the Rodney King
incident.

>integrity of LAPD, not thanks to some member of the public.

Even if I grant that point (actually, I do, now that I review some of the information that came out at the time), such behavior would have been discovered and acted upon much sooner had the general public been monitoring the bad behavior. Better yet, if the cops involved had been conscious of the fact that every Tom, Dick, and Jane in LA could see what they were typing, maybe they wouldn't have been so quick to act like racist jerks on the "private" MDTs.

sounding
>like an Army combat net radio channel at times.

Umm, where is the legal "duty" for a police officer to protect him/herself? Under NY law, a private citizen who is in his/her own home has no "duty" to retreat when faced with physical force by an intruder. A police officer NEVER has a "duty" to retreat, which is why they can use deadly force under more circumstances than we can, and why they carry guns on duty. If the police had a legal duty to protect THEMSELVES when exposed to physical danger, they would be totally useless as a peacekeeping agency.

>
> Cite your references, homey!

The War on Drugs. Watch the news. "The people" go along with whatever the
police say is the problem, although a backlash is starting to show up.

>> In short, what the "majority of the public" think they want is irrelevant
to
>> genuine public safety.
>
> As is the opinion of you & other hardcore scanner geeks that perceive
>digital encoding & encryption as threats to your selfish interests.

Has nothing to do with my hobbies. It is quite obvious if you just look
around that most people are blissfully unaware of the way society and
government actually work. They believe that we need more police, more

crackdowns, and more secure police radio systems while the FBI's statistics from the Uniform Crime Report indicate a multi-year downward trend in violent crime. Of course, many also believe the UCR because they have no idea how inaccurate it is as a measure of criminality, or why it is so.

I submit that scanner listeners are probably more "in tune" with the actual problems and issues faced by their public servants than those to whom police operations are a closed book.

>> Great idea! Let's let the police decide who may legitimately have
>> information, and let those police-selected for-profit "news"
organizations
>> decide what the rest of us may be allowed to know.
>
> Sorry, I won't pander to that conspiracy theory.

That's your choice, but it already happens every day. Most citizens do not monitor their local public safety agencies. All they know about what is happening in their communities is what they see on TV or read in the papers. Those of us who do monitor know about all those OTHER incidents that weren't covered, and we also notice with dismaying regularity how little the media report of an incident (in many cases, incidents that I have attended in various "official" capacities) resemble what actually happened at the scene.

The police don't need "private" communications networks to lock out most of the public because they already have their heads in the sand.

>> Apples and oranges. Some communities have "sunshine laws" that might
just
>> provide such protection from excessive governmental secrecy.
>
> Well I would hope so. But thankfully, just a few sad people such as
>yourself seem to view law enforcement digital encoding/encryption as being

forum.

I'd be happy to testify, but the courts (part of the same criminal justice system as the police) won't view me as any kind of "expert" until I finish my Ph.D. in Criminal Justice. You can subpoena me in about 4 or 5 more years. :-)

Hi all, My house was broken into and my BC 9000 was thrown in my water bed that was also sabotaged, I poured water out of the scanner an took it apart to air dry outside. It wasn't plugged up when it got wet. Should I try it out or send it to the factory? or trash it? Also, the phone at the factory is always busy, do they have e-mail? If anybody can help please e-mail me at....rock56@webtv.net THANKS

This is worse than mine, but years ago I 'dropped' my Icom u4 from my belt in a thunderstorm as I ran for the front door with my 2 year old in my
arms. I didn't realize I had 'lost' the radio till the next morning when I
couldn't find it. On my way out to the car, I noticed it in the flower bed
by the front door. It was QUITE soaked!

I opened it up and shook it out, then blew a hair dryer through it until it
was dry and warm. I tried turning it on. Nothing.

Then I set it on the workbench all opened up and exposed with a computer fan blowing on it for about 5 days. Finally, I closed it up and tried it. Powered up just fine. That was at least 9 years ago.

Other than the battery pack dying, and the 'bracket' for the BNC constantly coming loose, it's worked fine ever since. I still have it.

Dry out the scanner as best you can. Make sure everything is completely dry
inside before applying power to it. A one-time immersion may not harm it
too much, but I'd check the inside from time to time for signs of rust or
corrosion. If it doesn't get immersed again, it should be OK.

Tom

Source record: 110866
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I obviously didn't make my own "preferences" clear, and I wasn't trying to. I personally hope they DON'T get any deeper into encryption. My point is that the other arguments could be made in favor of encryption, and they are also valid and logical, though perhaps pushing it to what I would consider an extreme.

I listen to police comms all the time and would hate to lose that ability....though I live in a rural area now. Yes, over the years I've spent thousands of dollars on scanners, other receivers, antennas, crystals (THAT "dates" me, doesn't it?), freq books, software, etc. A substantial investment indeed.

My first response was kind of my main point anyway...you might want to verify if the LAPD system is designed for encryption of their general radio traffic. I believe it's not, though I don't recall who told me that...might have been Gene Hughes, not sure.

As someone mentioned, may have been you, most of the public probably doesn't care one way or the other and certainly doesn't know a scanner from a shortwave radio. Either way, I think you'll get a lot more mileage with the decision-makers (i.e. the LA City Council, ultimately, who hold the purse-strings) by focusing on the technical shortcomings and HUGE cost-overruns almost every other agency has run into even with "simple" trunking and digital signalling, not to mention encryption on top of either of those.

The council backed LAFD when they went to the FCC in their eventually-successful battle to avoid having to trunk their 800 MHz system...and their focus was strictly the higher cost and lower reliability for trunked. Public reception of their radio traffic never was an issue; indeed their freqs are listed right in their webpage. Of course, fire comms are much less "sensitive" in most cases than police stuff. (By the way, LAFD expects to be forced to go to digital signaling [not encryption] on their voice frequencies in < 10 years, as RF congestion brings about closer channel-spacing). We gotta start pushing the scanner-makers to get ready for digital...it's already here!

Same thing when LAPD, LASO and CPRA fought for years to get TV channel 16 released in the L.A. area for public safety ONLY. In the early days of that skirmish, most scanners only went up to 470 Mhz, but I don't remember that ever being brought up anywhere by anyone.

Finally (my soap-box is collapsing under my weight, and all my hot air isn't enough to help me stay up), my points were to intentionally raise the other edge of the issue. I don't think for a second that ALL communications

should be encrypted. My example about "criminal records" going over the air was that so much of that stuff was - and is - mis-information. Just a name and a DOB is hardly enough to identify someone and announce to the world his/her alleged record. Same goes for warrant checks...almost all agencies will have their officers bring the suspect in and immediately check for possible elimination when there's a "hit"...they certainly don't want the hassle of "oops, you're the wrong John Smith, lemme take you back to your car, sorry for taking two hours of your time."

I've listened to CHP for years and years, and except for possibly an occasional hot "crime broadcast" about a KNOWN suspect, I don't ever remember hearing criminal record info being broadcast over their system. All the time they DO broadcast "Driving Record" info, but even that is usually confined to prior DUI convictions or "suspended/revoked" drivers' license info. And that's generally after someone's been ID'd using drivers' license info which, while still subject to error, is at least a little better verified (CDL # and physical description, for example). And this is done only because it can have a direct effect on the officer's subsequent actions with the person being checked. A prior DUI conviction can result in a felony arrest the second-time around, with completely different levels of "probable cause" kicking in.

Same with a suspended/revoked license...the "service code" they usually quote will let the officer know whether the subject has DEFINITELY been advised of the suspension/revocation, or if, for example, the notice was mailed but returned by the post office as undeliverable or unclaimed. In either case, I believe, the officer MAY effect an actual arrect...usually a cite/release on-scene...but if there's any doubt that the driver received notification, most officers will simply cite the violator back to court.

MY bottom line: I don't think encryption is necessary MOST of the time; I think it is justified some of the time, and I hope it doesn't spread. I like to listen to police & other stuff on my scanners and hope to continue doing so. I think the police and the taxpayers ARE better served when the public has access to their radio comms, in general. I'm only trying to get people thinking about the many "sides" of the issue, so that a consensus can be reached somewhere near that "reasonable midpoint" you mentioned. That's what ought to be aimed for, in my arrogant opinion.

Hello.

I will do my best to be brief and to not make this email sound like an advertisement or spam. I just felt like as a customer I received exceptional service and wanted to pass it along to anyone who could benefit from the following;

First: I found someone in Ottawa who creates battery packs for the 245XLT, and has it ready, fully charged in one day, for only $20.00. For those interested; Alexander battery (613) 230-7117.

Second: The 245XLT is now available in Ottawa, at Wackid Radio for $469. CDN, This price was reached after dealing with a John Gramatikakis, and advising him of US pricing and availabilties. John agreed that his initial estimate price of over $550.00 CDN was too high and has reduced the price to a comparable US price. After going through the hoops of finding one in the States, and getting stung by UPS, I should have waited a week and picked it up locally, for warranty considerations, if nothing else. Lesson well learned.

Thank you; I apologize to those who may feel this is advertising. That was not my intent.

Bob P. Antonietti

Excuse me, asshole (you started the name calling), but I do "Get out more," probably more than you. You know nothing about me, but you immediatelly called me a "scanner geek," presumably simply because I love to scan. I was an Eagle Scout (I used to do 20 mile hikes -- have you ever?), UCLA grad, I'm married, and am not some "overweight scanner geek" like you claim. My original post was quite courteous -- I don't really know why you immediately turned to insults in your first reply. I don't really know why you posted these kinds of insults on the scanner NG -- If you have something against scanning, please don't post here and label us as "geeks." I think anyone who angrilly trolls NGs like you do just to get an angry reaction probably needs the therapy, not those of us who actually take an interest in the community and refuse to be sheep. You just earned a one-way ticket to my "block sender" folder, and I urge everyone else on this list and in this thread to do so as well, so that angry assholes like this don't get in the way of normal (and usually courteous) discourse.

Kiss my Ass,

Glenn Highcove (my apologies to all who believe in normal, clean discourse)

398. Using switching power supplies for RX

Newsgroup: rec.radio.scanner
Date: 1999-08-05 00:00:00 UTC
From: Christof Proft <christof.proft@post.rwth-aachen.de>
Message-ID: <7ocro3$p82$1@nets3.rz.RWTH-Aachen.DE>
Source record: 110869

Hello,

I would prefer to power my equipment with a switching power supply (12 V , 5 A), getting rid oft those different little main plug transformers
I am using an ICOM PCR-1000, LOWE HF-225 Europe, PR-150 preselector, NIR-12 DSP unit and a GRAHN magnetic antenna unit. The total consumption is about 2,5 A with all units powered.
The technical description of the switching supply said, that the switching frequency is about 70 KHz/Kc.
What about RF interference?
Has anybody experience about that?

Thanks in advance.

Chris

399. 18 USC Chapter 19, Section 2511

Newsgroup: rec.radio.scanner
Date: 1999-08-05 00:00:00 UTC
From: frussle@erols.com
Message-ID: <37adeeb2.10445049@news.erols.com>
Source record: 110870

Ok, so I looked a few things up. Here's what I found:

18 USC Chapter 119, Section 2511,
>(2)(g) It shall not be unlawful under this chapter or chapter 121 of
>this title for any person--
> (i) to intercept or access an electronic communication made
> through an electronic communication system that is configured so
> that such electronic communication is readily accessible to the
> general public;
> (ii) to intercept any radio communication which is transmitted--
...
> (II) by any governmental, law enforcement, civil defense,
> private land mobile, or public safety communications system,
> including police and fire, readily accessible to the general
> public; ^^^^^^^^^^^^^^^^^^

First question: What does readily accessible mean? After all, police have been making up 11 codes and the like for years. We don't consider those "inaccessible." Further, since MDT parameters are publicly known, aren't they "readily accessible?" Aren't trunk tracking scanners "readily accessible?" ("Privacy Link" is a funny name, isn't it?) Aren't speech inversion devices "readily accessible?" Where does that definition end?

Again from 18 USC 2511,
> (1) Except as otherwise specifically provided in this chapter any
> person who--
...
> (b) intentionally uses, endeavors to use, or procures any
> other person to use or endeavor to use any electronic,
> mechanical, or other device to intercept any oral
> communication when--
...
> (ii) such device transmits communications by radio, or
> interferes with the transmission of such communication; or
...

Second question: Does this mean you can't use a transceiver to intercept communications, but that a receiver is ok? Or are they using the word "transmits" differently (in a lawyerly fashion)?

I hate to say this, but this is legal mumbo jumbo. I'm a only an engineer and I have to say this is one rat's nest of laws. I'm not ignorant, I have a better than average education, and I can't figure this stuff out. Note: I've deleted the parts of each subsection which don't appear relevant --if you want to see the whole thing go to

http://frwebgate1.access.gpo.gov/cgi-bin/waisgate.cgi?WAISdocID=8384728515+0+0+0&WAISaction=retrieve

If I wrote software or designed radios the way the legislators wrote these laws, I'd lose my job in a heartbeat. Despite my contradictory statements, I do care about the law. I don't hesitate to look it up if I have a substantial interest. Yet this chapter of this legislation is so poorly written that I can't figure out what is legal and what is not.

I'm going to send a copy of this (with comparison to 18 USC 605 of an earlier day) to my congress critters. Maybe they'll feel obligated to do something about this mess. After all, we paid for it, we're bound by it, shouldn't we be able to understand it?

>You have it backward. If we start treating rights as privileges, then we
>retain no rights except the ones the government finds convenient to let us
>keep for a while. Privileges can be revoked, rights cannot.
>

I think that's a little simplistic, though. I'm not arguing with the concept, mind you, or with you personally (just want to keep the discourse civil) but it seems to me that if one really DOES have a certain right, but treats it as a priveledge IN THE SENSE THAT one does not abuse the right, and keeps things respectable, then that right will not be soon taken away, if only because it is not posing any problem to anyone else.
If rights cannot be revoked, than how is it that any government can "let us keep" any rights "for awhile"?
Rights can and have been revoked and changed in the past, as have priveledges, along state and federal lines. My point was that treating a right as a priveledge is safer for the protection of that right than simple, brute "it's-my-right-so-screw-off" attitude (that's not an accusation) so prevalent these days.
If a right IS threatened, one has the obligation to shout that it IS a right, not just a priveledge, of course. But while that right is NOT threatened, why make the federal case every time?
Mike

Should the real question be, does government have the right to encrypt? In a free society with "open record" and "freedom of information" laws on the books, does a government entity have the "right" to hide information from the public. At a time where the thin blue line still hides activities from public scruninty, from the beating and killing of suspects to payoffs, should a cloak of encryption be allowed.

Of course you can. e.g. around 1800 MHz. I didn't say that
you'd be able to do anything with them.

I used to use a switching regulator for my 2-meter FM
transceiver. It worked fine, no switching noise heard while receiving.
However, the power supply wiped out my stereo's A.M. broadcast
frequencies, so I went back to a linear regulator because I
couldn't listen to talk shows while monitoring the band.

Did anyone watch the Congressional hearings a couple years back after the Gingrich cell-phone incident. ALL the committee members were furious about cell-capable scanners...it obviously hit too close to home.

I wish i could find the transcript of the panel from the FCC when they came on..a couple of their top attorneys and aother big-shots. After opening statements and other perfunctory stuff, a committee member asked, essentially, "Since we enacted the ECPA 10 years ago, how many prosecutions and convictions have been brought?"
Well all the FCC guys looked at each other, each obviously hoping the OTHER guy had an answer. The congressman persisted...finally one of them replied, "Well, I've heard of one case for sure, I think it was in New Orlreans or somewhere like that....yatta yatta..I think the judge threw the case out."

The congressmen went NUTS! It was a truly great moment. The FCC was trying to tell them, without actually saying it, that they really have a lot more important stuff to do than trying to track down people who just MIGHT be listening to cellphone traffic on their toys.
Hopefully their priorities haven't changed that much, and all this concern about ECPA is relatively unnecessary. Other than us scanner owners, I don't think the other 250+ million Americans care one tiny little bit. When I use my cellphone, or my cordless, or even my hardwire phone, much less my company radio, I ALWAYS assume persons unknown (incl guv'ment types) might be listening and try to act accordingly. Beyond that, I don't give it much thought either...

Most open frame switching power supplies, and many of the enclosed models are noisy from MF to who knows how high. The Astron switchers are clean, and some, but not all, of the Japanese (Kenwood, Icom, Yaesu) are usable at HF. I have a 30 Amp Astron I use with my IC706 portable, i.e. with nearby poor antennas, and have had no problems. Can't say the same for some used switching supplies rescued from other equipment and tried before I sprung for the Astron.

>is there any way to use a pro 90 scanner to scan an ericson/ge edacs trunked
>system?

You can program the frequencies and use the scanner in conventional mode to scan them just like you would with any other scanner. Of course, you'll hear all the beeps and buzzes and other crap that Ericsson uses. You cannot track and EDACS trunked system with a Pro-90. They're completely different from the Motorola systems that the Pro-90 is designed to track.
The new Uniden 245XLT will track both Motorola and EDACS systems.

You do realize the FCC doesn't enforce the ECPA in regard to actual
listening, don't you? That belongs to the FBI. The FCC only enforces
equipment type-acceptance/selling/advertising rules, not use.

You might want to buy a can of tuner cleaner, and flush
the unit out with the batteries removed. There could be mineral
scale contamination that could potentially short out the printed wiring
board traces. Worked for me after someone spilled coffee with
milk and sugar into my rig.

Actually, your hardwire phone is very secure. It is extremely difficult
to get a court order to monitor phones. And believe it or not, the
authorized people who record the calls are not allowed to listen in.
On the otherhand, it is much easier for the authorities to get a listing
of all phone numbers that you have placed/ received.

Here is some food for thought. Recently I made a call on my Dad's dual mode Nokia cell phone (set to digital mode only) and was able to clearly hear my conversation on my scanner. I even got some feedback because I was so close to the scanner. If the signal is truly digital then I would not be able to pick it up on my bc895 right?

Correct. The phone probably could not establish good contact with a 1.9 GHz digital PCS service provider,
so it switched to the 850 MHz band using F.M. (CDMA, one of the leading digital air interfaces is also used in the 850 MHz band; however, there is no F.M in the 1.9 GHz band.)
Therefore,
"set to digital mode only" sounds like "the check is in the mail"

I was under the impression that the phone would display a no service message
if it was unable to make a digital connection while in the digital only
mode. If this is not the case than what is the point of having a digital
only mode?

Greg,
I'm not sure if this is a quirk with the phone or not. I work for
a major equipment provider, and I will ask around at work if
this is a familiar scenario.

Everyone,

I've got a mint condition Motorola ASTRO Saber Model III For Sale. It features the following:

Bandsplit: 406-470 Mhz (will go a bit higher..)
1 Meg Vocon Board which will support APCO-25 Flashing
DES-XL Module installed
255 Channels / 16 Zones / 16 groups
Motorola UHF Wideband Whip Antenna (grey code)
Motorola Hi-Cap Battery
All Serial/Model tags
Accessory Plug Cover w/screw
Original Box and User's Guide
Does NOT include charger

Supports MODAT, MDC-1200 Signaling, Scan, PL/DPL/RAT plus tons of other features....

Selling radio for only $1800.00 + 2nd Day FedEx COD Certified Funds. No trades, firm on price.....Serious inquiries ONLY!

Regards,

Lindsay C. Blanton

Everyone,

I've got an Ericsson EDACS MPA-System Portable for sale:

Features Full Keypad and Display, with EDACS trunking and conventional communications.

Radio is in good condition, works great - a few minor scratches here and there. I'd rate it an 8 out of 10.

Comes with 2 bad batteries, good charger, and antenna.

Asking $700.00 + 2nd Day FedEx COD Certified Funds. Firm price, no trades, serious inquiries ONLY!

Regards,
-Lb

Here's my 2 cents.

ETrunk has it's advantages especially when searching out new IDs and
analyzing a system. But the having a portable scanner allows me to
monitor specific groups for keeping up with traffic conditions and select
only specific talk groups. ETrunk (or Trunker in my case) limits how
selective you can be while scanning. A portable scanner also allows me
to monitor at work. Now if I can only figure out how to get a better
antenna
into my office.

I did some testing at the local mall. Using a dual band HT I tried 2M and
440 on 1/2 watt. I did not find a significant difference in coverage
through
the building. Not in that one at least. The main reasons I use the FRS in
the mall and other large stores is that the FRS is simple, rugged (Motorola
7X), does not require callsigns, and has a long battery life. Also, although
my wife has her tech license, she prefers using the simpler radio. Even
my 4 year old daughter has her own FRS radio.

>Has anybody experience about that?
>
>Thanks in advance.
>
>Chris
>
>
A switching power suply is a bad idead for use with radios.
They have much more noise than a good linear supply.
I was given a nice 120/240 to 12V@5A switch mode power supply.
It wipes everything out from 60KHZ (WWVB) to above the 70cM ham band.
I decided to keep it, but only to use with our thermoelectric cooler.
I seldom use the cooler and radios for a location with 110 at the same time.
Dig down and sped the bucks for a good, clean linear suplly. You will be
glad you did. OR even roll your own, power supplies are not that ard to
build. Start with a regulator like the LM338, 1.2-30V @ 5Amps, add a zenar
diode&SCR crowbar (to protect your equipment) and away you go.
Add a 120V realy to change from mains to back up gell-cell and you are ready
for most radio listening. (I use a relay to switch the DC supply off to avoid
the loss of regulation that a simple series diode can add.) And if you
set the power supply to 13.68, it will keep a gell cell topped of and they
will last a long time. Years. For a 11 cell nicad pack, set it to 13.75V
Good luck

> I want to listen to it all I'll keep the BC245....enjoy......
>
You may be unaware that the 245 does not 'listen to it all'. It will not track individual calls, patches, or pages. The 245 offers portability but is inferior to the trunker system in every other respect. That's not to say it is not an amazing product - it is! But being fixated on one approach only be it the 245 or trunker is unnecessarily limiting. As for your fanatic vs. hobbiest comment, that appears to point to laziness on your part more than anything else. Enjoy your 245.

From: Jeff <dupuisj@nortelnetworks.com>
Message-ID: <37AAEAF4.FE299191@nortelnetworks.com>
Source record: 110698

Hello, I have a Patrolman 2026 that when left on for a period of an hour or so will lose audio. I've tried connecting an external spkr to see if the internal spkr is cutting out. No luck. It would seem that something is heating up after a while causing the audio loss.

Does anyone have any idea what component might be failing? I suppose if all else fails I could send it to Radio Shack for them to repair, but if this is a simple fix i'd rather do it myself.

Thanks in advance.

Jeff

Message-ID: <7of8mv$oq3$1@fir.prod.itd.earthlink.net>
Source record: 110710

AOR 1000 channel portable scanner, receives AM, FM, FM-WIDE, 1- 600 mhz and
800 mhz to 1.3 ghz including CELLULAR.

All original accessories plus some extras, great shape.

This radio is much better than the Radio Shack PRO-43 which has received
some high bids recently.

If your water is hard you might want to flush it out with distilled water
and then dry it. Try putting it somewhere that is quite warm continuously
for several days in order to really bake it out.

As the other posters noted...as the unit was unplugged, you have a
reasonable chance of it working..,,but 2 things...

1.You may, indeed want to flush the board if the water(and any additives
that you added to it) leaves a conductive residue.

2.if it ends up ok, then check the speaker carefully..they often suffer
from water badly...of course they are not costly to replace.

If the unit does NOT start working, it's probably water in a coil or
transformer...in that case, consider trying a hand-held hair dryer to dry
things out(actually, you might want to try that either way).

Good luck.

Radar (police) operate on 10.525 Ghz (10,525 Mhz), 24.150 Ghz (24,150 Mhz) and 34.000 Ghz (34,000 Mhz).

Most common scanners only go to approximatly 999 Mhz or there abouts. Some more advance receivers might go to around 2000 Mhz but even these fall way short of the frequencies used by radars.

Greg:

Radar uses R.F., not sound waves. Even if radar did use sound waves, scanners do not receive sound waves. Scanners receive R.F., although not anywhere near the high frequencies used by radar. I think police radar is somewhere up around 10 GHz! So the answer is no, scanners can not be used as a radar detector.

Several of the maritime frequencies are available for assignment to the PW pool of eligibles. With responsible frequency coordination and adherence to prescribed power levels, coexistence is usually not a problem.

BTW, nice concept for a non-800 unified onscene frequency! NJ tried the same with "SPEN-4" (153.785) in their LE and EMS commo plans.

There is no comparable equivalent that isn't exclusive to LE, the Sherif's Ass'n, or the fire service here in Missouri.

Hi
Does anyone have the latest Radio Codes for the MTA,formerly LIRR and
Metro North,Police
Recently,,there has been a merger of police forces in these areas

Thanks
steve

Hello,

If there are any other scanner listeners from Montana out there, especially from the Billings/Red Lodge area, I would like to hear from you. Please respond either to this newsgroup, or by email, or my ICQ number is 33346922. Thanks again, talk to you later.

It could be something like a failing capacitor or even a cracked
solder joint (common). One trick I've used frequently is to let
the equipment run with the cover off until it fails. Without removing
the power, take a can of aerosol duster, invert it so it sprays
liquid instead of gas, and in a 'controlled' fashion, spray an
individual
component/area of the board. Wait a few seconds for the cold
soaking to take effect. By methodically going section by section
across the board, you will indentify the component that is overheating.
I have used this method successfully MANY times. Never had
one I couldn't find! Here's the spray I use:

Hi all, My house was broken into and my BC 9000 was thrown in my water bed that was also sabotaged, I poured water out of the scanner an took it apart to air dry outside. It wasn't plugged up when it got wet. Should I try it out or send it to the factory? or trash it? Also, the phone at the factory is always busy, do they have e-mail? If anybody can help please e-mail me at....rock56@webtv.net THANKS

I had a scanner totally immersed for 5 minutes. After taking off the rear cover and blowing it out with compressed air and letting dry it was fine, and still is to this day!

Does anyone know how I could get a hold of the frequencies for Addison Airport in Texas? Any help would be appreciated.

Thanks,
Robert

488. Re: What are the CalCoord frequencies? 156.075, and...

Newsgroup: rec.radio.scanner
Date: 1999-08-06 00:00:00 UTC
From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <7ogh40$q20$1@mail.snowcrest.net>
Source record: 110740
Cross-posted to: alt.radio.scanner,rec.radio.scanner,alt.emergency.services.dispatcher

From Don Root, CA OES:

[CALCORD - 156.075] is also a frequency in the former Highway Maintenance Radio Service, which is where we got the channel! See 47CFR90.20, which lists 156.075
in the Public Safety Pool as _Mobile_Only_. The fact it is Maritime Channel 61A is a bonus.

BTW, there is only the one CALCORD channel at this time.

Responding to a similar inquiry about CLEMARS:
CLEMARS is the California Law Enforcement Mutual Aid Radio System and is licensed to the state and administered by OES. Channels include 154.920, 154.935 (low-power), 155.475, 460.025 as well as low-band and 800 MHz channels. Uses are classified and prioritized. Some channels, like 154.920 and 460.025, may be used on a regular daily basis as a secondary channel, but the channel must be relinquished to mutual aid users. (There is no similar authorization for regular daily use of the CALCORD frequency.)

OES has established "four" (actually five) priority levels for use of the various State Mutual Aid Radio Services (SMARS) frequencies:

Priority 1: Immediate protection of life and property,
involving multiple agencies
Priority 2: Immediate protection of life and property,
involving a single agency
Priority 3: Events of a pre-planned nature (parades, etc)
Priority 3A: Drills or Emergency Management exercises
Priority 4: Day-to-day activities (on a secondary basis)
of a single agency

Priority 4 activities are allowed ONLY on selected SMARS frequencies, including 39.46, 154.920, 460.025, and 866.2000 (with associated inputs to the repeater outputs). CALCORD is not one of these channels, as pointed out above. Activities of a higher priority level take precedence over a lower priority operation.

OES Telecommunications is in the process of revising all of our Mutual Aid Radio System plans, and intend to post them on the OES web site [http://www.oes.ca.gov] later this fiscal year. We have some major system upgrades under way, which we need to do first.

I again welcome questions or comments on these matters.

Don Root, Deputy Chief, Telecommunications & Warning Section
California Office of Emergency Services
Information Technology Branch

489. California Firearm Confiscation Frequencies.

Newsgroup: rec.radio.scanner
Date: 1999-08-06 00:00:00 UTC
From: Tommy Mathews <TomMathews@ecompany.com>
Message-ID: <37ABC823.6154329@ecompany.com>
Source record: 110741

Frequencies for the California Department of Justice, (CA-DoJ)

154.680, 154.665, 154.695, 154.920, 155.475 & 158.790
(please add corrections and additions if necessary)

California State Police: 453.825, 460.375 & 460.450

There is a proposal in the California State Senate or Assembley
to create a Firearm Law Enforcement Unit within the CA-DoJ:

PURPOSE

"The purpose of this bill is to establish within the
Department of Justice, a Firearm Law Enforcement Unit
for the purpose of investigating gun law violations and
assisting local law enforcement agencies, as specified,
and to appropriate $1,900,000 for the new unit."
-

Here is a quote from the SKS buyback webpage, http://www.sksbuyback.org

Procedures For Complying with the New SKS Sporter Law

If you have determined that you are in possession of a firearm(s)
meeting the prescribed criteria for the SKS Sporter Buy-back Program
you must, pursuant to California Penal Code section 12285(b)(1),
dispose of the rifle prior to January 1, 2000 by one of the following
methods:

1) Render the firearm permanently inoperable.

2) Sell the weapon to a licensed firearms dealer who has a valid
Department of Justice assault weapons permit.

3) Remove the firearm from California (it cannot be brought back
into the State).

4) Relinquish the firearm to your local Police or Sheriffs Department,
adhering to the guidelines, for disposal and reimbursement.

Please be aware that the SKS Sporter Buy-back provisions end on
January 1, 2000. Beginning January 2, 2000, persons in California
possessing an SKS semi-automatic rifle with a detachable magazine
may be subject to prosecution, and the weapon subject to seizure,
pursuant to California Penal Code section 12280.

Procedures For Turning In an SKS Sporter & Reimbursement

A. To relinquish your SKS Sporter to your local law
enforcement agency, you must strictly adhere to the
following guidelines:

1. DO NOT JUST SHOW UP, CALL FIRST!

2. Contact your local Police or Sheriff's Department to make
specific arrangements before going to their offices.

3. When contacting an agency, call the departmenti¿½s listed
administrative or business telephone number.
Do not call 911 which is for emergencies only.

4. Follow the instructions provided by that agency.

5. When transporting an assault weapon, it must be unloaded and
in a locked container pursuant to Penal Code section 12285(c)(7).

B. The local law enforcement agency, after determining
the weapon meets the criteria of the SKS Sporter
Buyback Program, will issue you a Department of
Justice voucher redeemable by mailing it to:

Department of Justice
Bureau of Criminal Information and Analysis
Firearms Program - SKS Sporter
P.O. Box 820200
Sacramento, CA 94203-0200

Vouchers must be forwarded to the address listed above within 90 days
of its issuance. After verification of the information provided, the
Department of Justice will redeem the voucher by issuing a check in the
sum of $230.00.

C. If you have previously relinquished your SKS
Sporter to a law enforcement agency and it would have
qualified for the Buy-back Program, you may contact
the Police or Sheriffi¿½s Department where the rifle was
relinquished and provide them with sufficient
information to verify that the prior relinquishment
occurred. The law enforcement agency will then
provide you with the Department of Justice voucher.
--- ---

There has been heated political talk about a confrontation
between SKS owners and the CA-DOJ.

There are an unknown number of SKS's in circulation because
many SKS owners did Not register them with the CA-DoJ.

Of the few that were registered, what would happen if
some of SKS owners Refuse surrender their SKS Sporters?

What are the mutal aid frequncies used by the CA-DoJ
and the local law enforcement agencies?

.yes, it probably does....is there a "pocket" version or maybe a belt clip
for the whole mess?...as for being serious..isn't it enough just to be able to
listen to the conversation in it's entirety?...no, I think you're confusing
the fanatic with the hobbiest. While I respect your opinion I think it's just
that. If I want to see reems of data and in color I'll get a computer, but if
I want to listen to it all I'll keep the BC245....enjoy......

Fred

498. The TRUTH about Wireless Phones

Newsgroup: rec.radio.scanner
Date: 1999-08-06 00:00:00 UTC
From: dec42879@aol.com
Message-ID: <19990805230333.10031.00006918@ng-fk1.aol.com>
Source record: 110919

As a Consultant in the Communications Industry I know all the tricks large companies they pull on customers.

Watch for:
Free Long Distance: (only where they have a service area: (Chicago, Houston, New York, Los Angeles, etc.) It's not everywhere in the country).

Purely Digital:
The service is not "Purely Digital" Sprint PCS uses digital in their home service area: You roam on analog elsewhere.

Coast-to-Coast Service:
Maybe all on analog roam where you can be cloned.

No Deposits, No Credit Checks:
They check all credit unless it is on prepay conditions (they make prepay customers pay more because of lack of credit).

Contracts (1,2, or 3 year Contracts):
Don't ever sign a legal document without having it read by a lawyer. They will charge you $250 for canceling your cellular phone if you no longer want it during the contracted time. It can be a costly legal battle.

A word of advice: Don't believe everything you hear and only half of what you see.

Don't believe the first salesperson, always get a second opinion from a separate source. My company does consulting to all types of communications customers.

Everyone knows nothing is free, read the fine print.

If you have questions about wireless phones email: dec42879@aol.com

Source record: 110927

frussle@erols.com (Jake Brodsky) wrote:
> First question: What does readily accessible mean?

The definitions are included in 18 USC s.2510. Without quoting the whole section, 'readily accessible to the general public' means any radio communication that is not "(A) scrambled or encrypted; (B) transmitted using modulation techniques whose essential parameters have been withheld from the public with the intention of preserving the privacy of such communication;". The rest of the definition excludes subcarriers, common carriers (i.e. phone systems), and broadcast auxilliary.

> ... intentionally uses ... any electronic, mechanical, or other device
> to intercept any oral communication when--

That prohibition refers to bugging. The key phase is "intercept any oral communication". It doesn't have anything to do with scanners.

> If I wrote software or designed radios the way the legislators wrote
> these laws, I'd lose my job in a heartbeat.

This part of the law is result of 60 years of modifications. If you had a program that had been continuously patched for that long, it would look just as bad.
"If architects built buildings like programmers write programs, the first woodpecker that came along would destroy western civilisation."

Keep in mind that the bad guy use scanners too, burglars and crooks like to know when the cops are around, you got pulled over....unless you were driving a tow truck the cops were probably just taking down all the info on you just in case of trouble in the future. The cops also don't like people listening to them period...it's a police thing.

Keep in mind that in Canada scanning is legal, no cop has the right to even tell you to turn your scanner off or that you can't listen to thier channels, but make no mistake about it...if they took all those details from you....you will be marked on the police computer as "owning a scanner", if you are just enjoying the hobby however....then you really have nothing to worry about.

Calcord is a singe frequency as stated 156.075.

It stands for California Coordination.It is used by multi agencies like,
CHP,Caltrans,Fire,Ambulances,Helicopters.

It was first created for Freeway Hazardous Material Spills,So every one at
the
scene could talk to each other.It is now used for a variety of Incidents
statewide
here in California.

It is used as a mobile & portable only freq,no base stations allowed.

Happy Scanning,

Jerry T.

Not all fresh water is all that fresh. If they have hard water then you
really need to flush it with something like distilled.

One problem with just letting it air dry is that there can still be water
trapped inside after a week. Elevating the temperature a little (to, say,
100 degrees) helps to get rid of that trapped water.

526. Re: SPAM from Bill's 2-Way

Newsgroup: rec.radio.scanner
Date: 1999-08-07 00:00:00 UTC
From: Bubba Joe <bubbajoe@mail.usa.net>
Message-ID: <7oiuefkmj1@holly.prod.itd.earthlink.net>
Source record: 110547

Well, having a sense of humor that rivals a fourth-grader puts us about par with the world average intellect. Than not-withstanding, what made the message SPAM and the answer so amusing was the incomplete posting: "They're back in stock" without any additional information as to what is in stock is asinine and invites criticism. Even further, for sale notices by commercial entities is SPAM in this newsgroup -- PERIOD. You want that kind of SPAM, answer the phone when solicitors call you at dinner time -- keep it off a users group.

p.s.

the retort was funny and even though your sense of humor isn't up to a fourth grade level, it most likely reflected what most everyone's thoughts were when they read it.
It is no reflection on Bill's 2-way business, just his choice in using this newsgroup for that particular post. If Bill is the professional you say, he would have a chuckle over it too.

Although the Y connection will not work,
there is one way you can share one antenna with your
scanner and your ham radio, providing that they are on different bands.
You can use a duplexer, which has two filter paths, and
will allow your transmitter's power to reach the antenna with
minimal insertion loss. It filters out your transmit frequency on
your scanner frequencies RX path, so the scanner will not overload.
This technique can only work if your transmit frequencies are
somewhat far away in frequency than your scanner receive
frequencies.
Ask for more info at the Hamfest. Good luck,
Al

Allow me to jump into this discussion and then out. If something is lacking, let someone else make their own site that includes what's missing or make a curteous suggestion to the owner. Also, I have found that typing (for real typers and not "peckers"), you get your fingers going so fast that sometimes grammar suffers a bit and even spelling at times.

Sometimes that will happen. Sometimes you review a site or post so long that you no longer can even "see" the mistakes you have made. Readers will just have to learn to accept it and not get in a wad about it.

Believe it or not, humans to make mistakes sometimes.

(I hope I haven't make any typo's or grammar errors ... :)

Good enough for what?
You may want to explain what bands and features that you
are looking for. For example, I have an old Pro-46, and it is
"good enough" for me, but it does not provide trunk tracking, and
it scans much slower than current scanners.

Depending on your needs, sure they are.
Actually, for basic PD, FD, EMG and WX monitoring, they are both fine scanners.
"Good enough" is in the eye of the beholder (or in the ear of the listener, in
the case of scanning) so the question is a little vague.
I have used both (the 2066 is still in my shack) and enjoyed them both. No
BC9000XLT, but still very respectable.

Sure, if your sense of humor rivals that of a fourth-grader.
The subject line SAID "SPAM", so if anyone is mad about it, it's your own fault
for looking. AND, at least it's ON TOPIC spam, unlike a lot of the other crap
that flies around in here...
For what it's worth, I have never had any less than excellent business and
service from Bill's 2-Way. One of the most well-informed, customer-friendly,
and fairly priced businesses extant.
Bill, you could spam more often, I wouldn't mind.
But the fact that you almost never spam makes you that much more respectable.

The expandable antenna is not any better than the rubber antena, what type of reception problems are you haveing, are you in a big city downtown near lots of transmitters?, sometimes "staticy" reception is actually to strong reception and the radio gets over loaded, try taking the antenna off and see if reception gets better, if it is a true reception problem then you may want to consider an 800 MHZ antenna - rubber or base-mobile

StarDude16 wrote:

not just 51 div!, several divisons are switching around these days, you will find 51 and others on the metro police "trunking" channels, theres 10 of them, if you have the trunk tracker and just want to listen to 51 the 896 is the talkgroup. A local scanner book or the onscan web site can direct you to the actual frequencies,

you can usually buy the bulb at radio shack, there repair is usually a simple soldering procedure, if you are not comfortable with doing it yourself....any electronics repair shop can do it.

Bad "cold" solder joint on a circuit board?, bad resistor or capacitor,?, something that may be heat sensitive?, I would go to radio shack and but a can of component cooler, then open up the radio and when the problem happens start spraying until the problem goes away....then start narrowing it down to which component it is. If it is a bad solder joint....just keep looking and every soldered connection on the board and touch up any that look like they might have a hairline crack in them

Hi Bruce,

Boy did you luck out! The backlight on the PRO-2004/5/6
burn out after a few years. Common problem. Fortunately,
it is still available through Radio Shack for the 2005 and 2006
scanners. The cost of the part is ~$30 and requires that the
scanner be opened up to gain access to the old backlight.
It takes a fair amount of time (esp. if you haven't done this
before) to remove the front faceplate. You will also need
to unsolder the old backlight and solder in a new one.

I have images online at this link:

http://dune.globe-net.net/~rc123/Robert/Backlight.html

If you would like to have this done for you, I also perform
this service through my website:

http://dune.globe-net.net/~rc123/Robert/Services.html

Any questions, contact me directly. Again, great job on snagging
that scanner at a bargain price! Some guys have all the luck...

Robert

Ottawa is a G.E. EDACS trunk system, is probably beeps and maybe even buzzes between transmissions, the new BC 245 xlt is a great scanner that does conventional freqs, Motorola trunking, and EDACS. Keep in mind that with the EDACS system you will need to know the excat order of transmission before the radio will track properly, if you already have that....1,2,3,..etc then you are fine !

> This radio is much better than the Radio Shack PRO-43 which has
received
> some high bids recently.
>
Well, no it's not better than a PR43. The AOR1000 is such a drag to program that most people dumped them soon after buying them. They're not worth but $175 or so... and that would be in mint condition along with a third party maunal that actually decodes the crap in the japengilish manual that the scanner comes with. Better yet. Buy something else and forget about this dog scanner!

I think whats taking place is that the cell phone system that you're trying
to monitor has upgraded their equipment...they are blocking or scrambling
the cell phone output...therefore you are only able to monitor one end of
conversation which is the hard line unit.
Hope this helps!

>The AOR1000 is such a drag to
>program that most people dumped them soon after buying them.

I bought my AR1000xlt as my first "real" scanner and I really liked it. The manual that came with it sucked big time but once I figured it out on my own (took a couple of hours not all that hard) I found it very easy to operate. As for being better than a PRO-43 I have never had one so I can't say but the AR 1000XLT has wide coverage, user selectable step sizes and recieve modes. It has HF coverage and mine goes from .500-1300 no gaps, uses aa batteries no special packs, 1000 scan channels in 10 banks and 10 programmable search ranges and scans and searches at a respectable speed for it's day. I still use mine daily never had any trouble with it. Just my opinion so take it for what it is worth.....

Yes the police ought to be arrested for sending this confidential information into every antenna in the area.
Come to think of it, Corporations that send cellular information into every home ought be brought to task too!
I understand the idiots who have infested our government are trying to blame citizens for the corporations lack of decency in protecting the privacy of phone conversations. That folks are charged with a crime for deciphering information that is clearly sent into their home against their will is proof that something is drastically wrong.
The real criminal element are the corporations who bribed the legislation and the police who enforce the corporations bribed legislation.

587. Re: BC 9000

Newsgroup: rec.radio.scanner
Date: 1999-08-07 00:00:00 UTC
From: jtward01@aol.com.nospam
Message-ID: <19990807010558.20399.00009632@ng-cf1.aol.com>
Source record: 110749

Ed,

I've used BC9000XLTs for about six or seven years now, and for me, they're great. Ninety-nine percent of my monitoring is military, particularly military aviation, and the fast scan speed, selectable receive modes and alpha tags are invaluable.
However, the 9000XLT does suffer from poor dynamic range which leads to a lot of intermod and image problems, particularly from FM broadcast and TV audio.
I've gotten around this to a great extent by using antennas cut to the bands I'm interested in and by not using wide band antennas.
You might want to wait a couple of months. Uniden is expected to release the 9500XLT with trunktracking and other improvements by Christmas. If the 9500XLT shows as much improvement over the 9000XLT as the 895XLT shows over the 890XLT it will be well worth the wait.
If military aviation monitoring is not important to you, and you want to buy a radio now, then consider the 895XLT. It offers computer control capability, Motorola trunktracking and a number of other advanced features. It does receive the 225-400 UHF military airband, but it does not allow the user to manually select the receive mode so you can't monitor miltitary aviation comms in the 138-144 range in AM mode. Other than this, by all reports it's an excellent radio.
Check out http://www.strongsignals.net for reviews and FAQs on dozens of scanner models.

HELP HELP HELP!AND AGAIN HELP!

Hi all,
please can anyone help with mods for an old but still useful
scanner,i particularly would like to get it to scan on 137 mhz which is
missing.It scans 68mhz to 512mhz with gaps,the main one i am interested is
the gap between 136-138mhz.Can any one help with a mod or at least put me
out of my misery and tell me it can't be done :-(
Any other mods will be gratefully recieved :-)

Thanks again for reading this.....
Cheers

Bill.

Find a Watkins-Johnson, Calfornia Microwave or military surplus reciever and you can receive the frequencies stated in an earlier post. All one will hear is a simple carrier that is turned off and on by the trigger (on a radar gun) or on/off switch (on the dash mounted units). The unit simply measures the difference in frequency recieved versus that transmitted to determine speed based upon the Doppler Shift. Find a collage level physics book such as Holliday-Resnick the formula to determine the doppler shift at say 10GHz is in that book.

When there are enough digital systems in use to generate sufficient demand for the scanners so a manufacturer can recoup the research and development costs plus make a profit on such a unit.
Remember, it took more than 10 years from the time the first trunked systems went into operation before trunking was widespread enough to generate adequate demand for trunking capable scanners.
Manufacturers have to be able to sell these things by the tens of thousands to keep the R&D costs low enough on a per unit basis to make the radio affordable to the consumer.
A couple large cities with digital systems may generate a few thousand unit sales, if that, not nearly enough to justify the R&D costs, plus the costs of tooling up to produce a new model.

>From: Rich richardh@access1.net

>Is there a comparison report out there between these two scanners? >>>

Monitoring Times did a review on both when they first came out. You'll be able to find numerous reviews by numerous individuals all around the net using a web search site or www.deja.com for the newsgroups. What you'll see more than anything is peoples personal opinions which is sometimes even better since they actually use the scanner for more than a short review period.
I have owned both. I still have the BC2500XLT if that is any indication. The Pro43 was smaller and had a better rejection factor for images, etc. Both cover the MIL-Air band. The BC2500XLT covers a more expanded frequency range though, has a tuning knob which has three seperate functions, has a count feature, a bigger display and even though didn't use regular AA batteries to begin with, like the Pro43, I modded an old BC2500 battery pack to allow the 2500 to run off of 4 AAs.
The BC3000XLT replaced the 2500 with improvements in internal circuitry but certain features didn't carry over.
As I said opinions will vary.....
This is just mine.

Very well said and I concur 100%. As Phil said, there are a lot of losers who know NOTHING about giving to anything. All they know how to do is take, take, take some more, and then bitch when they feel like doing something else. A hobby composed of such individuals is doomed to failure. That's why I'm always happy to see a "new kid on the block" whose dedication and passion to the hobby and their fellow members is plainly evident in their work.

Keep up the good work Mr. Eavsdropper ;-)

Happy Scanning !

603. Alinco DJX10T - good one?

Newsgroup: rec.radio.scanner
Date: 1999-08-07 00:00:00 UTC
From: graphite@netcom.com
Message-ID: <7ohgcv$con@dfw-ixnews3.ix.netcom.com>
Source record: 110765
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Can anyone tell me whether the Alinco DJX10T is a good scanner, say as good as the ICOMM R-10? I know the X10 goes to 2 GHZ, whereas the R-10 only goes to 1.3 GHZ. But, what about the sensitivity and selectivity, etc.? Also, can the X10T be modified?

Thanks,

Bill

RADAR calculates the distance of an object based on the time delay of the reflection of the radio wave off the object. By measuring the distance at several points in time, the velocity of the object can be calculated.

Doppler radar is used for weather displays, it is more expensive than regular radar. I have never heard of police using Doppler Radar.

HE did not say they used doppler radar, he explained how the police radar works, which is by measuring the tiny differences in time between the signal going out and the signal coming back or the " Doppler shift" . His explanation was slightly technical and very concise. his references he stated would explain the operation in detail if you have an interest in the details of how it works. Don't bother to flame my simple breakdown of it.

The Canadian market is probably the LAST place that would see digital receivers. Your government has already passed legislation requiring that anyone who wants to possess such a receiver obtain a permit.

Hello,
I am going to a Hamfest tomorrow and there will be some dealers there selling all types of antenna. I would like to get a scanner antenna for my truck . What would anyone suggest ?
I also run a Ranger RCI 2950 Ham Radio in my truck. What would happen if I put a Y in the line and ran the scanner off of that antenna ? If it would work, what would happen when I transmitted and had the scanner on ? Would it hurt it ?
I am running a PRO-62 for the scanner that I would be using.
Thanks,
Tinker

BTW Does anyone know where I can get a case for the PRO-62 ?

Since it was dropped in fresh and not salt water, I would not recommend any more water. Just put it in a dry place and leave it alone for a week or so to give it time to dry out. The hair dryer can get quite hot and may end up melting delicate flexible circuit interconnects. I had a friend who distroyed his 2 M HT with a hair dryer.

Speed guns use doppler. It is much simpler cheaper and accurate than measuring range and calculating speed over time. The radar pulse is emitted from a gunn diode. When it bounces off a moving car it's waves are compressed or expanded slightly due to the relative motion of the car. Thus their frequency is changed. This is the doppler effect. When that signal returns to the radar gun it mixes with the original signal. When two such signals mix they produce two additional signals that are the difference and sum of the frequencies. For a typical radar gun, the difference signal is on the order of KHz. This is measured with a simple frequency counter and displayed as MPH. It is a much simpler system than measuring range and calculating the speed over time. To measure the range accurately enough you have to accurately measure very short times, on the order of nanoseconds.

The Doppler radar you mentioned is a whole radar station. But Doppler radar is simply the process of measuring the speed of an object directly with radar. It can be done in addition measuring the range, bearing and altitude as in weather radar or air search radar.

> Doppler radar is used for weather displays, it is more expensive than
> regular radar. I have never heard of police using Doppler Radar.
>
The radar that police use relies on the Doppler theory, i.e.- a signal is sent out from the transmitter and an object in motion, coming towards the transmitter or going away from the transmitter, has radio waves bounced off, and reflected back to the radar unit. These waves are proportionally higher or lower (whether the object in motion is coming towards or going away from the signal source). The radar simply measures the difference between the transmitted signal and what was reflected back and converts that to a speed reading.

Aviation and Maritime radar operate on a different theory. They send out a signal, and the amount of time (usually in microseconds) it takes for the reflected signal to be returned, is converted into distance.

630. Toronto Canada, 51 Div. Police freq. change

Normally, 51 division police are on 861.9125 MHz but seem to have changed
only for this one police division, just before the start of the "Safe Park" occupation of Allen Gardens park by the homeless.

I have been scanner for the new frequency but without any luck.

Has anybody come across the new frequency?

I suspect there is going to be a police action against these people on Sunday night or on Monday, that will be very interesting to listen in to.

FOUNDATION FOR AMATEUR RADIO
c/o Al Brown
8645 TOWER DRIVE
LAUREL, MD 20723-1244

-- For immediate release --

F.A.R.FEST '99 AT NEW LOCATION

The Foundation for Amateur Radio (FAR) will sponsor the 42nd annual F.A.R.Fest amateur radio hamfest on Sunday, September 26, 1999, at Prince George's Stadium 1/4 mile south of the junction of US-50 on US-301 in Bowie, Maryland between Washington, DC and Annapolis, Maryland.

This is a new location for F.A.R.Fest, with a paved area that accommodates over 700 tailgaters. Vendors and other sellers will be able to set up under the canopy of the stadium concourse. General admission tickets into F.A.R.Fest '99 are $5.00 at the gate; $10.00 for tailgating, which requires the purchase of general admission. Vendors and other exhibitors should contact Marry Morris, N4TCI at amateur_radio@hotmail.com, or at 703-971-3905 for more information.

The Special Events station W3PRL-AM will be on display.

Talk-in frequencies are 146.520 MHz and 147.105(+) MHz.

To get to F.A.R.Fest '99:

From points North:
Take I-95 south to the Baltimore Beltway (I-695) to Exit 4 (I-97 South) toward Annapolis. On I-97 South, take Exit 7 (Route 3 South - Bowie/Odenton). Take Route 3 for approximately 11 miles. After passing under the Route 50 overpass, proceed to second traffic light and turn left into Stadium Drive. NOTE: Route 3 changes to Route 301 after you pass under Route 50.

From points South:
Take I-95 North to Exit 104 (Route 301 North). Take 301 North past Upper Marlboro. Go through the traffic light at the Route 197 intersection (Rip's Country Inn will be on the right). At the next traffic light, turn right into Stadium Drive.

From points East:
Take Route 50 West to Exit 13A (Route 301 South). At the second traffic light, turn left into Stadium Drive.

From points West:
From I-70 East, follow directions coming from points North.

From Washington, D.C. or the Capital Beltway:
From D.C., take New York Avenue to Route 50 East, or the Capital Beltway, Exit 19A (Route 50 East). Take Route 50 to Exit 11 (Route 197). Go South on Route 197 for approximately 1.5 miles to Route 301. Turn left onto Route 301 and remain in the right lane. Turn right at first traffic light into Stadium Drive.

For general information on F.A.R.Fest '99, see the webpage at URL:

http://www.amateurradio-far.org/

or contact Al Brown, KZ3AB, at &#65533;amateur_radio@hotmail.com,&#65533; or at 301-490-3188.

Source record: 110561
Cross-posted to: alt.radio.scanner,rec.radio.amateur.antenna,rec.radio.scanner,rec.radio.shortwave

>
>1. Omni Directional vs. Yagi antenna?
Omni directional means the antenna radiates in all directions. By definition it is unit gain. Sometimes called and Isotropic radiator. A yagi is an antenna with a series of elements. A driven element that will be a half wave dipole resonant at the desired frequency. It will have one or more reflector elements behind the drive element eachh of which is slight longer than the resonant element, and the element in front of the driven element. It will also have one or more director elements, each of which are shorter than the elements behind it. Looks like a log periodic, except element sizes are much close together, gain is higher, and bandwidth is much narrower.
>2. Gain? High number vs. low number .... and what is meant by unity?
Unit gain is an omni directional, or isotropic radiator. Gain is generally gain relative to an isotropic radiator. It is achieved by radiating energy in a particular pattern and/or direction. I. E. in some directions is may radiate no energy. Generally the more elements, the higher the gain, and usually director elements outnuber reflectors by a wide margin.
>3. Factory tuned frequency?
Where the driven element is tuned when you take the antenna out of the box.
>Will a gap between the desired monitored
Depends how big the gap is, but in generally +/- 5% of the frequency will make little difference. The further you get, the more the impedance of the driven element and the antenna impedance change, which degrades performance.
>frequencies and the FTF make a diiference?
>4. Bandwidth @ 1.5:1 VSWR?
VSWR is the Vertical STanding Wave Ratio. It is a measurement of how well the antenna is matched to the feedline. A Yagi is typically about 72 ohms. A VSWR of 1.5 to one means the impedance is either 72 x 1.5 or 72/1.5. (usually it is the former). As you frequency moves away from resonance, the impedance rises. When the antenna is becomes a full wave dipole, the impedance is in theory infinite. The 1.5:1 VSWR gives yoy an idea of how far away from the resonant frequency you can be before it starts to impact performance.
>5. Vertical Beamwidth @ 1/2 power?
half power is the 3db point. A yagi radiates in a cone. If the field strengh 'dead on' is say 100V/meters, at some angle away from dead on, it will be 70.7 volts per meter. This is the 3db point, and effectively tells you the beamwidth.
>6. Front to back ratio (yagi)?

This the ratio of signal sent forward versus off the back. If the
field is say 100V/Meter at 10 meters in front from the driven
element, and 1V per meter at 10 meters behind the driven element, this
is front to back ratio of 100. generally the more elements, and in
particular the more reflectors you have, the higher the Front to Back
ratio.
>7. Groundplane? I've noticed that the base station antennae I'm looking at
>don't have radials. However, to use a mobile antenna in a base station
>application, I need an adapter which provides radials.
A ground plane reduces the radiation angle of most antennae, and tends
to inrease the gain. You don't need it, but most antennas work better
with it. ON a vehicle, the vehicle body provides a sort of ground
plain. On a base station, the soil is often a passable ground plane.
>8.Nominal impedance?
Design impedance. On a Yagi, it should be near 72 ohms at resonance,
but tends to be reduced somewhat by the parasitic elements.
(Reflectors and directors). Often adjustable with a feed adjustment,
like a Gamma match. By altering the feed point on the driven element,
you can alter the nominal impedance.
>
>Considering your explanation of the above, what should I be looking for to
>obtain the monitoring results I'm looking for?
If you want really wide band performance, and can live with 0db gain,
Use a Discone. Commercial versions run from 25-1300mhz in a single
antenna. You can get gain, but much less bandwidth in a Log Periodic.
Yagi's give high gain, but operate only over a narrow range of
frequencies.

I wrote a letter to the Ontario Ministry of Health once, asking them if
they'd be willing to tell me what frequency the local air ambulance
used. They wrote back with a stern refusal and included a photocopied
section of the relevant laws suggesting that they couldn't tell me
because it would be illegal for me to be listening to them. I read
through the laws carefully and wrote back with my analysis: I would be
breaking no laws because their radios are not encrypted but THEY were
in violation of federal statutes protecting patient confidentiality by
broadcasting this information in the clear over public airwaves. They
never replied. Imagine that.

Do yourself a favor and sell the scanners, then use the money to take up
another hobby, say, rocket science or do-it-yourself brain surgery.
If you really want to learn about scanning go to RadioShack and buy a copy
of PoliceCall Plus and read the first few chapters (then read them again). They
contain a pretty good explanation of radio communications systems.

From the IEEE dictionary: "omnidirectional antenna - An antenna having an essentially non-directional pattern in a given plane of the antenna and a directional pattern in any orthogonal plane. Note: For ground-based antennas, the omnidirectional plane is usually horizontal."

Omnidirectional is NOT the same as isotropic. Isotropic is a sphere. Omnidirectional is usually a pancake.

MF10 SPECTRUM DISPLAY UNIT
A RARE FIND - COST £1800 + VAT
USES 10.7MHz IF - SUITABLE FOR IC-R7000/7100/8500 ETC.
DISPLAYS 1MHz BANDWIDTH WITH 5KHz RESOLUTION
INCLUDES BUILT-IN TV DEMODULATOR WITH TUNABLE AUDIO SUBCARRIERS
BUILT-IN AUDIO AMPLIFIER / SPEAKER
BUILT-IN MAINS PSU
ORIGINAL MANUFACTURER£S DATA SHEET

£300

Just a quick note: Dropped by your web page, Pete. Very well done.
Nice to see a page which is clean, non-cluttered and full of useful
information! Hey..Maybe you will start a trend! Who knows!
Congratulations on a fine job

Bob

Optoelectronic Scout 40.
Frequency counter, logger, and reactive tuner for different scanners.
In excellent condition w/ charger, and manual.
Will forward more details / and picture upon request.
Asking $300 , cost $459 new.

Thanks,
James
e-mail: jbraun@localnet.com

Hello E.M. & Group,
I lost mine.
I thought I was paying a fair price for a scanner - I was the winning bid - I'm happy right? So I peruse rec.radio.scanner [I left awhile ago, there was a LOT of noise] to see what's goin' on and I see the scanner I bought for sale @ less than half of what I paid at the auction, listed 10 days prior to the auction end. Hey, caveat emptor or some latin phrase like that, right? Kudos to the seller (just wish I wasn't the buyer!)
Next time I come here FIRST to see if what I want is FS. ebay is great if you need something you can't find in your area, or if you bought the IPO.

Live and learn from me. (I'll pass on those bricks, BTW) (:

I have tried for years to get an etrunk program to work on the local edacs system in my area. I have tried every version posted on the web...no luck. The programs won't hold the data channel. Signal strength only goes to about 40 when it is really about 100.
The BC245 follows it fine so it's not some kind of special system.

The trunker program for Motorola systems works flawlessly in every version I've seen so it's not my hardware.

I agree that these programs are the way to go at home and I'd like to get etrunk working.

Any ideas?

While this may seem like a good idea to some, you can't possibly have the resources to check the veracity of every claim of "so-and-so's a ripoff artist!" posted in newsgroups. There are many cases of accusations made simply because the accuser didn't take the time to check all other avenues of resolution. I have read numerous accusatory posts which, after a few replies by the more level-headed folks in here, changed their tune when they realized "hey I can call UPS with the tracking number" or some similar thought they had not had before, and lo and behold! it wasn't the other parties fault at all...
It's good for folks to know whom to stay away from, but unless you are absolutely sure about the accusation AND the background of the accuser, you could get into a lot of trouble...
And why would someone who is
<"not a regular user of this newsgroup">
feel that they are in a position to judge those who are? If you don't visit here regularly, how are YOU going to KNOW if a story sent to you isn't part of a long-standing feud between some of the long-time users of the group? There would be no truth to the tales but you wouldn't know about that because you never hang out here enough. You merely want people to send you e-mails with their
<"sad story of being cheated">
and you mindlessly
<"ad">
that story to your list, and you will VERY LIKELY be harming the reputations of otherwise decent and fair people in this group and any other group you deal with.
Not very responsible or fair, Don.
I suggest you rethink your plans.
Mike
P.S. The word is 'add', with two d's, not 'ad', as in advertisement. Since you mis-spelled it twice, maybe it's a Freudian thing...

Source record: 110592

Where I work I recently noticed very short, thin, stick-style antennas sticking out of all of the more modern Coca-Cola machines! These machines are obviously transmitting data. Does anyone know anything about this? I bet they're transmitting back data to a single source which in turn transmits to another source information regarding machine inventory, cash level, and perhaps even alarm signals. Does anyone know anything about this? It might be interesting to scan the data streams!....

>>4. Bandwidth @ 1.5:1 VSWR?
>VSWR is the Vertical STanding Wave Ratio. It is a measurement of how
>well the antenna is matched to the feedline.

That's Voltage Standing Wave Ratio. It is the ratio of the voltage
maximum to voltage minimum points on the feedline. It will be
1:1 for a feedline which is terminated in its characteristic impedance.
It will be some value greater than 1:1 for all other cases. It can be
taken as a measure of how well matched the load impedance is to
the characteristic impedance of the feedline. Sometimes that's
important, sometimes it isn't.

(This is widely misunderstood. Sometimes a low VSWR is a good thing,
sometimes a high VSWR is more desirable, ie the feedline is being used
as a matching transformer. It depends on the total antenna system design
whether a high or low VSWR is desirable or not.)

The antenna feedpoint impedance will vary with frequency. At some point,
it may be equal to the characteristic impedance of the feedline used (it may
not for certain designs, but for purposes of simplification we'll assume it does).
As you deviate up or down in frequency from that point, VSWR will increase.
So you can use the range over which VSWR stays below some value as an
indication of antenna Q.

Antenna Q is one indication of antenna efficiency. A higher Q (narrower
VSWR bandwidth) usually means, for an electrically small antenna, better
efficiency at the center frequency. For electrically large antennas this
isn't such a clear cut indication because it has a relatively high Rr, which
results in a lower Q value overall, and a wider VSWR bandwidth, while
still being very efficient. So antenna Q is context sensitive, depending
on the particulars of the antenna system being measured. A rough rule
of thumb is that for antennas of approximately equal size, the one with
the higher Q (smaller VSWR bandwidth) will generally be more efficient
(inside that frequency span, we don't know much about how it will behave
outside that span from just this information).

The point of this is, a very wide VSWR bandwidth may *not* be a desirable
attribute of an antenna, since it may indicate low efficiency, ie a dummy load
has an extremely flat VSWR curve, but is a lousy antenna. OTOH, we may
desire a broad VSWR bandwidth in some cases so as to avoid having to
use a tuner to present the load impedance to a transmitter that it is designed
to see over a band of frequencies.

This stuff can't be reduced to simple statements such as "low VSWR good, high VSWR bad". In fact, in some cases we want exactly the opposite. It is all very context sensitive, and depends on our desires for the total system of antenna, feeder, and radio. The objective is to couple energy efficiently from the transmitter to the antenna (and then off into space). Or vice versa to couple energy efficiently from space to the antenna and then on to the receiver. Antenna systems are generally reciprocal, so what works well for transmitting also works well for receiving (but not always, there are differences depending on whether the receiver is internally noise limited or is limited by atmospheric noise).

Simple answers are often wrong answers. You can take an analytic approach, and analyze the entire system to make an appropriate choice, or you can just cut and try and be satisfied with whatever you come up with. The latter method is commonly used by those who are intimidated by the physics and math needed to do an analytic solution. The solutions achieved by this less disciplined approach usually aren't optimum, but there's often a lot of margin for error because signals are strong and radios are sensitive. In other words, often any old thing will work well enough that you don't *need* to do better.

IF YOU are referring to the upcomming new radio shack scanners they
ARE built by UNIDEn & "house labeled" for radio shack. The radio shack
versions usually cost more and/ or have less performance than the compareable
Uniden, (untill they go on a "blow out discontinued" sale of some sort, then
they are worth the asking price)

679. Re: Alinco DJX10T - good one?

SNIP SNIP SNIP

I can understand where you may be coming from, but, you seem to be
leaving out some safe-guards. What if I were to inform you that Don
Bertone was a rip-off artist, and made up a wild story. You would
then add his (your) name to the list and everyone would say "Don't
deal with Bertone".

Or, if I asked you about Bertone, and you told me he was a rip-off
artist, even though he wasn't on you list, you told me he was.

By keeping the list to yourself, you make yourself judge and jury. An
accused individual doesn't even know he (or she) is on that list.
Which means they have no means of defending themselves against false
accusations.

While a list like this may be worth-while, it is a big responsibility
and must not be taken lightly. If you do it, it must be kept overtly,
posted prominently on all appropriate news-groups, and every
name\incident reported must be thoroughly investigated prior to
putting a person's name on the list.

While I don't doubt your good intentions, you don't seem to have
thought this thing through. The system as it stand now (openly posted
accusations and rebuttals) seems to work quite well. Just keep
following the posts!

Of course, another way of looking at this is that your message is a
spam/troll/rip-off. But that is the case , is it?

TO THE GROUP: Sorry if I got long-winded, but something like this can
get out of hand.

Happy Scanning!!

Jim

Edacs data rate is 9600 bps and it demands all of the computer's
resources to keep up. You MUST run etrunk in DOS mode, not a DOS
window. Signal strength requirements are fairly stringent to get 100%
so that all the radio id's are decoded. I am using a laptop P133 and do
get 100% on etrunk, so any pc at that level or faster should work.
Motorola systems run at 3600 bps so it is much easier to get good
performance with a slow computer or using a DOS window. The % numbers
the program displays relate to data decode accuracy and not signal
strength, although a weak signal will result in low data decode
accuracy. The BC245 decodes only the group portion of the data, which
demands less computing power.

Unfortuantely you posted incorect information about Uniden buildong the new scanners from radio Sahack.
These are going to be built by GRE of Japan.

Does the 895 include a telescoping antenna? This is usually standard
but I see no mention of it in any of the product reviews.

Anyway, it would never work. Old, identified crooks change their names; new crooks come along... The buyer needs to be beware--get references if possible; get the name of their employer; check the phone number with the phone company/Bigfoot.com etc. Even then, there are no guarantees. If the deal sounds to good to be true, then walk away from it.

Green Mud <cowgoose@aol.comedian>
Unfortunately Green, you posted incorrect information about the new scanners from the Radio Shack 2000 catalog being built by Uniden. They are going to be made by GRE of Japan.

There is a web page with detailed info on these scanners at
http://www.leesville.com/scanner/newscan.htm
until someone kills it. :>{

Pictures can be found at
base models http://www.gre.co.jp/pics/scanbase.jpg
280 x 169 pixels size 10539 bytes

Handheld models http://www.gre.co.jp/pics/scanhand.jpg
280 x 201 pixels size 13628 bytes

Rich Wells killed my post with pictures to his web page as inappropriate to his discussion
of the UNIDEN 245 XLT so that link is now dead.

You will be more up to date if you subscribe to the T2@onelist.com mailing list for breaking news on second generation multi tracking scanners (ie T2). For instance in the last twelve hours I have discovered that these scanners may be doomed to lackluster performance tracking Motorola sytems compared to Uniden's technology. Look up the T2@onelist.com archives for today for these details.
There are other scanning mailing lists that have bits of information on these scanners such as Trunkcom, Scan-L or even ScanAtlanta@onelist.com

I am hunting down for area frequencies of louisiana. I would be more interested in the 800 mhz numbers only. I already have tons here. I have a 400 channel handheld and almost all of the channels are taken. I would be so glad to share my numbers with those who help me out. I live northwest of the lafayette area, But i will be glad to take numbers i dont already have, you can email you numbers directly to me , at jondeaux@ignmail.com

I recently purchased one in very good condition for $225.00. It
included the service manual and original antenna but the backlight
was dead, as most are.

You can 'Search Completed Items' on the Ebay website to see
what others have agreed to pay for this item.

It is a great scanner but lacks the speed of the 2006... Cheek likes
'em because they are EASY to hack.

Robert

I agree with the other replys .. a good radio with lots of features for the price. There are better pure scanners and there are better pure SW receivers .. the DJX10 does both pretty well.

What I like:
- Small size .. fits in shirt pocket
- 1200 alphanumeric memories .. I can't remember 1200 frequencies just by the numbers!
- Good sensitivity "DC to daylight" .. works very well with a two-foot whip.
- Flexible controls .. can use it pretty well one handed or while mobile
- Easy snap on batteries and drop in charger

What I would change:
- Faster scan speed .. you'll miss action if scanning more than a few channels
- Less inner mod .. I live a a strong RF area and some things show up where they shouldn't
- Longer battery life .. a charge lasts but a few hours
- A faster way to fine tune SSB signals
- Add FM stereo in headphones

All-in-all, a very fine radio for under 400 bucks. When I'm heading out with a radio and am not sure what I want to listen to, this is the radio I take along.

The Ranger Unit HQ is still located in Sanger while the Command Center is located in Fresno on the southwest corner of Clovis/Clinton. They built it along with the USFS. I believe the USFS also has their dispatch center there but I am not too familiar with their operation. Fresno City Fire was dispatch by CDF in a joint operation when it opened up but due to political/internal problems Fresno Fire went back to their PD/Fire dispatch center in October of 1998. The Region HQ is still located in Fresno.

That's true. It doesn't take a lawyer to realize that you will open yourself up wide to potential lawsuits from the offended parties. Unless you thoroughly investigate every single accusation (which would be impractical if not impossible) you will be liable. Even if you post that "Joe Blow said John Smith ripped him off..." John Smith can sue you as a codefendant in a suit against Joe Blow.

Don't get me wrong, I think it's a good idea. But unless you plan to check every allegation to ensure that each one is true before you post it, don't do it. There's nothing worse than an innocent party having his good reputation tarnished by untrue allegations.

And the above is not meant to be taken as legal advice. As much as I dispise lawyers, go see one before you proceed for your own sake.

Tom

Or they could just be telling the Coca-Cola company when they need to be refilled. Please don't be paranoid. I've never heard of them using radio, but Coke machines have been hooked up to phone lines to call the company when the machine gets low.

Take a handheld frequency counter and hold it next to the antennas to find the frequency. Hopefully if the counter has a fast enough gate, it will catch the signal being transmitted. And hopefully the signal will transmit long enough to catch it. But unfortunately you probably will be sitting there all day because I doubt they will transmit all that much. Probably just a short data burst once a day, or once a week, depending on how much Coke goes in/out of the machine.

If you find anything out, let us know. I'd be interested in hearing what you find.

This is very interesting because the State of Massachusetts is currently debating a similar law. The MA law would limit cellphone use to "hands free" operation which would mean that a cradle for the handheld cellphone would have to be installed in the vehicle. When I heard the details of this proposed legislation the first thing that came to my mind is "How does one call another without any type of VOX system?"

One would still need at least one finger on a number memory button to activate the cellphone.

I have used "ungrounded" radios (Icom IC-28A), with both a Radio Shack
diskcone and a home made 1/4 ground plane antennas oin locations where
a ground was imposible to get. (high on a rocky ridge).
The radio drew power from a gellcell pack and teh antennas, radio and
TNC (this was for a AX25 experiment) where intentionaly ungrounded.
Worked great. Very low SWR.

But, as a practical mater I like to ground all my radio, coax braids etc.. It can help reduce static, and might prevent a structure fire in the event of a direct lightning strike.
And now that Ithink of it my first CW contact was on 80mtrs with a QRP rig, on that same ridge, again with a compltly ungrounded radio/antenna/and me. Used a dopole. (worked 4 states and Canada on tha tfirs attempt with about 2 watts!)

718. Pro34 Scanner Problem

Newsgroup: rec.radio.scanner
Date: 1999-08-09 00:00:00 UTC
From: knock knock <knock_knock@my-deja.com>
Message-ID: <7omkqb$cr1$1@nnrp1.deja.com>
Source record: 110451

I have a Pro34 scanner. An AC adapter that I used to power it had gone bad and started to throw out 15V DC instead of 9. Although the unit still worked with the adapter, something had gone bad so that the unit wouldn't work with power coming from the batteries.

After disassembly, I replaced the DC plug-in jacks because they were loose and worn. I replaced the diode on the main power board becauase it had gone bad, and while I had it all apart I removed diode D10 to enable the blocked-out cellular coverage. I re-assembled the unit and all appeared to be fine.

However, the squelching seems to act funny when I do a continuous frequency scan. Normally I turn the squelch all the way down and the scanning stops and I hear static, which indeed is the case for the first few minutes the unit is running. However, after a while I can turn the squelch all the way down but the unit keeps scanning. It does not stop so I can hear the static.

I was just wondering if anyone else had experienced similar problems. I'm thinking something else was damaged by the 15V or perhaps some sensative component got too much heat from the soldering iron or something.

Any suggestions are welcome...

>
>Brad Houser

There was an article written about 1984 or so that describes how
police radar works, and how it could be jammed. The technology
has changed, but the basic foundatations are still the same.

It was titled The HitchHikers Guide to Radar Jamming and was
originally posted to the rec.auto newsgroup after someone posted
one of the idiotic foil in the hubcaps kind of thing.

I think I'll browse the archives and see if it's still around somewhere.

Mike

>reflection of the radio wave off the object. By measuring the distance
at
>several points in time, the velocity of the object can be calculated.
>
>Doppler radar is used for weather displays, it is more expensive than
>regular radar. I have never heard of police using Doppler Radar.
>
>Brad Houser

Police RADAR is EXTREMELY simple in that it mixes a portion of
the outgoing beam with the incoming (reflected) signal that is
doppler shifted. The difference is the doppler shift, and for
automotive
speeds is in the audio range. By choosing the correct time base,
all the radar units do is have a COUNTER to display the speed.
In the last few years, radar units have become quite sophisticated,
using DSP techniques to clean up the signal, look for interference,
and even look for and warn the operator of attempts to jam them.
(Jamming is actually quite simple and easy to do with cheap parts.
The hard part is to do it so that it's not detectable!)

Doppler radar as used for weather reporting is quite another matter.

Please get your facts straight before you spout misinformation
as truths.

Mike Yetsko

I saw a setup like this in one of my catalogs that does transmit data such as money, temp, inventory, alarms, usage, peak usage times, ect.ect.AS far as the band they used, it was around 460 MHz and they also had an 800 MHz model available as well. Really handy if you need to track things like that. I certainly wouldn't rule out the camera though...You never know when BIG BROTHER is watching you.

Cross-posted to: alt.radio.scanner,rec.radio.scanner,alt.emergency.services.dispatcher

The SCANnorCAL "Shared Files" have two updates now posted, a new and improved Oakland Public Safety EDACS Trunked system file "OaklandPublicSafety.txt" from John Drake. Also a corrected & updated (but still needs fine-tuning) CDF Ranger Unit ID list "CDFidrs4.doc"

SCANnorCAL subscribers < join at www.onelist.com/subscribe/SCANnorCAL > can find these and other files at http://www.onelist.com/shareddir/SCANnorCAL/ (after you log in, usually!)

Police radar does not use Doppler WEATHER radar, but it does use the Doppler shift principal to measure the speed of the target vehicle. It does not directly measure the distance to the target, just the (Doppler) shift between the transmitted and reflected signal. This shift is proportional to the speed of the object.

731. Pinellas County Fla Freq's

Newsgroup: rec.radio.scanner
Date: 1999-08-09 00:00:00 UTC
From: BlueMax <rroewer1@tampabay.rr.com>

Is there anyone that has any current info on the trunked frequencies for Pinellas Co. Fla,
in particular, the Sheriff's Office? After a 7 month or more hiatus from monitoring I recently
dusted off my TrunkTracker and re-programmed the freq's as shown in Police Call, and programmed
in the fleet maps. I seem to be getting a lot of county activity, but no Sheriff's Office. Would like
to know if they've made any changes in the system, or what????

>> these laws, I'd lose my job in a heartbeat.
>
> This part of the law is result of 60 years of modifications. If you
>had a program that had been continuously patched for that long, it would
>look just as bad.

Nonsense. Why isn't Section 605 a mess like this? I can read 605 and
understand it. This section is brand spanking new. It's nearly
incomprehensible.

> "If architects built buildings like programmers write programs, the
>first woodpecker that came along would destroy western civilisation."

Get real. I'm not bashing lawyers. I'm trying to read the law which
applies to me. At some point, as any programmer will tell you, it's
worthwhile to delete and rewrite. If this is what legislators do
instead of delete and rewrite, then we have a serious problem here.

If the scanner can receive on the frequency the digital phone operates on then yes it can monitor the digital stream. Not much good however as all you will hear is the white noise of the data stream!! You could put it onto a scope and watch the nice 1's and 0's goinf by - if that ammuses you.

Primecell sells them, $14.94 + $4.50 shipping. On ebay do a seller
search for primecell to see the auctions. They run many auctions for
the same battery simultaneously and you will be able to get one for
$14.95. They are listed as 235 batteries, but they fit the 245 just
fine.

Haven't a lot of police (at least State and County) agencies switched to laser based
speed measuring devices?

I know there was some talk several years ago about health effects on officers that kept the radar "gun" close to them, even when it was "off", and most of the radar detector ads now also say they have 180° (front & rear) laser detection.

Anybody with first hand or current working experience with them?

TIA.

Received a catalog today from the mail order house Fingerhut. In it were two interesting items. The first that caught my eye was an alpha-numeric pager that both receives and transmits. This $50 gadget allows kids to send and receive messages from other kids with the same type of unit. While the 25-foot range keeps this one in the realm of toys, I wonder how long it will be before we see similar products for adults with better range (or are they already out there)? The second item was a set of walkie-talkies. Now, I imagine these use good old CB Ch. 14, like most toy walkie-talkies do, but what is so stiking about these radios is the styling. They really look like professional "cop-style" radios, complete with lapel mikes. If you've got some rug rats in your house and you want to get them started young on the wonders of radio this might be a good place to start. You can call Fingerhut at 800-233-3588 and request a copy of the "Take Time for Kids" Back to School catalog, if you're interested.

Yes it is true. Page 25 Sprint PCS☐ "User Guide" (© 1997 Sprint Spectrum IP) states "Note: You cannot dial your three emergency numbers when your Sprint PCS Account has been restricted for credit purposes. _You can call 911, however._"

Same goes for cell phones, even though the cell phone industry fought against it when the reg was first proposed. Not sure if it is an FCC or legislative act though.

Look on your WIN 98 CD for a directory called "powertoy" and install TweakUI. It allows you to setup
your boot options (GUI or command line), even gives you a selectable menu to choose from on each
boot.

Message-ID: <37AF66BC.616E3AE7@whalestooth.com>
Source record: 110485
Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.radio-shack

I am sorry to ask a question that may seem dumb and has probably been answered before but I just couldn't find what I needed doing searches of dejanews.com

I recently upgraded to a Pro-90 from my old handheld and now that I have the ability to scan so many more frequencies I am interested in an external antenna. I live in the boonies but I plan on heading into the city soon to get what I need. Here are my questions for all you experts:

1. Should I buy a good antenna from Radio Shack meant for scanners? Which ones are best? How much should I plan on spending?

or

2. Should I build one? What should I get for the Pro-90?

Your help and expertise are very much appreciated!!

Please email me if you can as my boss gets really PO'ed if I spend too much time surfing.

759. advice about Alinco DJ-X10

Newsgroup: rec.radio.scanner
Date: 1999-08-09 00:00:00 UTC
From: John Beamer <jbeamer@worldnet.att.net>
Message-ID: <7onubfmsd1@bgtnsc03.worldnet.att.net>
Source record: 110492
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I am looking at purchasing a DJ-X10 receiver but need some feedback from people who are using the radio.

I like to keep frequencies for a city together in bank. This way when I'm driving and out of range of a city (or just don't wont to listen) I can turn the bank off.

Question, how easy is it to change the 'linking' between banks to select/deselect the banks you would like to monitor. I have read a review about the radio and it stated it was cumbersome. Please let me know if you think this is feature could use some improvement.

Also if there is anything else I should know about the unit please let me know.

Thanks in advance!

760. Setting Up Trunker

Not to get too far off topic, but since this a 895 question, I'll ask any way. Have any of you ever had trouble holding on to a channel that is transmitting while scanning? The unit will be scanning, and stop on an active channel, but will start scanning again after a short while, even though I know the transmission did not end. Also, it only seems to happen to one or two channels at any time. Any thoughts or ideas are greatly appreciated. Thanks in advance.

Hi,

I just bought this unit June 22nd, and received it July 14th and have used
the MVT9000 very little since the time of purchase, < 1 hour on it. I have
just recently acquired an IC-R7000 base model and I never really had a need
for a handheld, but it was great while it lasted. Including accessories:

OP-90 Case
MVT-7100 Antenna (It sure beats out the stock 9k antenna)
Radio Shack 20-006A
Universal Power Adapter
Box, manual, packaging (yes i kept it :)), original receipt, batteries, belt
clip, handstrap, 9k stock antenna, etc...

Please e-mail me a reasonable best offer, everything is mint, less than an
hour of use and no "shock" thanks from help from Rich on the polarity
part :).

Regards,

Aaron

Source record: 110500

They can say what they want to, it isn't under their or the cellular provider's control. This is an FCC regulation that went into effect this year. By order of the FCC, ALL cellular systems have to accept 911 calls, even if the phone being used is not "hooked up". I don't know what the effective date of the order is, but it applys to all cellular systems in the U.S. The same ruling (I believe) also mandates that location information be calculated by the cell system so that an approximate location can be supplied to the E911 systems.

Maybe you're right, but I 'd recheck that info if I were you. Sanger should be, (or at least it used to be), the Ranger Unit dispatch HQ. Fresno has always been the Region HQ and Region dispatch operations, (Region 4).

>If memory serves me correctly, a few years ago I heard both sides.

If the frequency is between roughly 870-890 MHz, then that is the tower side. Sometimes on those frequencies, you can hear only one side. That may be because one side is using digital? Dunno. Before it became illegal, I sometimes heard "dead carriers" that went on for minutes. Just as the cell switched, I could hear voices. Once I heard a woman in California calling someone in Oregon. I'm not quite sure how that happened, or why her call was routed through Kansas City so that we could hear it. Sometimes, as I noted above, if one side is apparently silent, you may be able to hear a bit of voice as the cell site switches. And why, if a caller is stationary, will the cell site switch? I'm not talking about somehow being on the border of two cells, but rather switching rapidly through several cells. Too bad I can't do that any more. I had a nifty grid plan for tracking cell calls, which I can't use now that it's illegal.

Slightly off topic, but what the heck...

On my laptop I have Windows 98. Since I run several different DOS only programs, like Etrunk, MTrunk, TrunkTrac, Probe and Etrax, is there a way I can make the laptop boot straight to DOS instead of going into Windows first? In Win 3.11 I would just rem out the "win" instruction in autoexec.bat but that doesn't work anymore.

783. Help choosing a scanner, Trident TRX-100XLT?

Newsgroup: rec.radio.scanner
Date: 1999-08-10 00:00:00 UTC
From: Anthony Clarke <anthony.c@iname.com>
Message-ID: <37B068C2.E2F4960E@iname.com>
Source record: 110344
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner

Hi,

I've been doing my research, and I've decided that I'd like a scanner with full range coverage (30MHz-1GHz) with AM FM and WFM. I'm not bothered about SSB as I've got a decent shorwave reciever anyway.

With this in mind, and hoping to spend up to ï¿½200 (maybe more), I've come up with this short list:

Trident TRX-100XLT ï¿½200
ICOM R2 ï¿½130
Yupiteru MVT-7100 ï¿½185
Standard AX-400B/Welz WS2000 ï¿½145

The ICOM-R10 is slow and more expensive.

The MVT-7100 was released in 1993 and I'm a bit reluctant to buy something that old, the ICOM-R2 doesn't have a keypad (how do you input frequencies?), the Trident is the fastest scanner/searcher...

Has anyone had any experience with the TRX-100XLT? Any other scanners I should consider? Comments?

Thanks,

Anthony.

No, data skip is off. It happens on voice transmissions.

Yep that's true, in my area the emergecy services ie police, fire and rescue now use a Motorola digital trunking system. It makes my uniden scanner into a paper weight because it can't pick up anything.

Barrie Shepherd wrote in message ...

Hi Guys!

Maybe for collectors? I came acriss this critter recently and it is a 6 channel, 5 band critter still in the box!

This is obviously an older critter (20-103) but in good working condition and looks to be a 9/10 (1 off for age).

I think the crystals are $2-3$ at Radio Shack and it runs off of 4 AA batteries. It has physical channel on/off switches and scanning LED's.

I am selling off some gear to get an HF rig since I recently got my Tech Plus.

Any fair offer will be accepted.

I got a Gradis YT- 9200 handheld scanner/receiver for sell.
This unit is in mint condition and I have to sell it ASAP.
This is the little brother to the new YT-9400!
I ONLY have ONE battery pack for this unit.
I don't think you'll be able to get another battery pack for this unit
unless you work or know somebody who works for a approved agency with
a official letterhead.
It's possible that you can write or call Gradis and ask.
I guess it's not illegal to buy the battery packs?
It will include a drop in charger and AC adapter to run and charge it.

This radio covers 25-1300 MHz with NO gaps!
It scans at 50 channels per second.
Sorry, no search modes.
There are 150 programmable channels in conventional mode.
This unit can be programmed to follow Motorola Type 2 and digital
ASTRO systems.
It's pretty complicated though. The manual gives you instructions on
how to do it.
This unit is APCO 25 compliant along with 3 other conventional DES and
5 speech inversion modes.
This unit WILL NOT multi-track or scan EDACS!

This radio does CELL-TRACK!
Cell track will follow analog (SORRY, NO DIGITAL) cell radio
telephones in the 800 MHz band..
If the phone changes towers and you're in range, you'll be able to
follow it from tower to tower.
This is the radio that the police use to monitor cell calls.
This radio has full duplex cell track mode to hear both, the unit and
tower side of the conversation at the same time!

Gradis is a small and "secret supplier" of Motorola based radio
systems scanners.
This radio won't ever be available to the general public.
Get this HOT unit while you can.
Please, only SERIOUS inquires ONLY!
I'll take the B/O by Monday at 11:00 AM Eastern time.
I need to receive payment, sent overnight by FED EX by Tuesday
morning.
I will ship this unit Tuesday by FED EX after receipt of payment.
Cash only!

Contact me @ mgd99@usa.net

Good Luck and happy bidding!

Source record: 110364

Just bought a pair of FRS radios from radio shack and was wondering what the ACTUAL range is. Of course, the dude at RS said they will go "3 miles", but I know better.

I will be using them for a variety of functions, but am most interested in using them in the desert while using my dune buggy. Will they go 3 miles over flat/desert terrain?

Do the line of sight rules exist on a radio that is only 500 Mw? If I am on top of a hill 12 miles from the other radio, but can see the other radio location, will they make the stretch?

Any and all info is appreciated in advance.

I own the sc-150, and it is a great scanner. Yes, you can scan more then one bank at a time, same as in almost any scanner. You put all of your police freqs in certain banks, same with rescue, air, and fire, and if there is something specific you want to here, you simply turn off the other banks. The only problem is somehow the little pin in the antenna broke off and I had to buy a new antenna, but it probably isn't a fault of the scanner. At $140 dollars it is a great bargain, and the yellow color is really fun!

Ok.........
You won't find any info about this receiver in a magazine or the
internet.
This radio is for government agencies only!
I got this radio from scratching somebody's back then they scratched
mine.
I'm selling this radio because my GF needs medical attention and she
doesn't have medical insurance.

This radio is in mint condition.
It does everything and more than i stated.

818. Radio Shack Scanners Cheap

Newsgroup: rec.radio.scanner
Date: 1999-08-10 00:00:00 UTC
From: Barry Adair <Barry@Adair.net>
Message-ID: <2b2s3.6288$vu2.1888@news.rdc1.tx.home.com>
Source record: 110379

I have a Radio Shack PRO-2050, Base 300 channel trunktracker, and a PRO-90, handheld 300 channel trunktracker, both for sale, I am going to replace them with uniden, the pro-2050 is 5 months old and needs repair, I went to the local Radio Shack store located on Meadowbrook Drive and I-820, in Fort Worth, the manager POed me so I am not going to have it repaired, it is in warrenty but I refuse to deal with Radio Shack again, so I am selling both of them for $200.00, and whoever buys them can deal with the attitude at Radio Shack, the Pro-90 works great, but if you are local to Fort Worth I would advise you against going to the store at Meadowbrook and 820, because of Stephen the manager, he has not found out that being a Radio Shack Manager, is only one step above, and pays less than being a garbage collector.
E-Mail me quick because they will not last at this price.
Barry@Adair.net

819. USING CELL PHONES AS SCANNERS

820. Re: Some FRS Questions...

Newsgroup: rec.radio.scanner
Date: 1999-08-10 00:00:00 UTC
From: mrspadea@aol.com.HCR.ORG
Message-ID: <19990810194352.03121.00000285@ng-ca1.aol.com>
Source record: 110381

FRS radios will give you on average, a line of sight range of about 2.5 miles over open areas. For congested areas and when on the move; ranges of about 1.5 miles can be expected with good signal quality.

You will get the best performance if you always use fresh batteries or are fully charged and maintain clearance from the radio when transmitting.

FRS is a useful service within short range communication needs of families in parks and around marinas/attractions or small businesses as noted lately, but for better range and more powerful output with only a slightly greater investment, consider the GMRS (General Mobile Radio Service) : a licensed portion of the spectrum with the benefits noted and others as well.

There are Steering Groups and other sources of information along these lines out on the Web.

For more FRS info:
(Frequencies, links, Groups, GMRS...)
http://expage.com/page/pbfrs
or
alt.family-radio

Hope this helps.

823. Re: Pro 60

Newsgroup: rec.radio.scanner
Date: 1999-08-10 00:00:00 UTC
From: mrspadea@aol.com.HCR.ORG
Message-ID: <19990810195328.03121.00000294@ng-ca1.aol.com>
Source record: 110384

There is a Backlight Modification for the Radio Shack Pro-60 Scanner out on the Internet; this mod will permit the user to adjust the preset backlight control setting.
I have no other information on this one.

There is a speaker replacement suggestion that was seen on a newsgroup some time ago, after following the directions I found the audio quality of the Pro-60 greatly improved.

As originally manufactured the Pro-60 was lacking by was of audio. With room to spare inside the case a replacement mod can be completed by almost anyone.

These are the only 2 modifications I am aware of after searching for some time now.

As a recommendation I would replace the duck antenna with an extendable whip type which will give better reception across the board and is fairly inexpensive at around 5$.

Good luck.

Tinker,

I have tried to use a CB antenna (unmodified) with a scanner and the performance was terrible. I did pick up an MFJ NMO dual band (144/440) that works reasobaly well and is quite compact. I also have a Hustler magnetic mount scanner antenna that works even better - particularly on VHF-LO. The MFJ was about $15 and the Hustler was about $29.

Somehow I doubt that if someone even sent you instructions,
you would be able to perform the miniature soldering needed to
add and remove components. Never mind program firmware.
You may be more successful turning a B&W television into a color TV if
you have an itch to experiment.

There are several devices out there for "older kids" to send and receive messages. Bell South provides service for the RIM950, a pretty neat looking pager that can send a message to another pager, email address, fax machine, or telephone.

Most of the two way radio's for kids are either operating on freq's in the 49mhz range or the newly formed FRS UHF freq's. CB Ch14 became too clogged up long time ago and now the only thing you will find on the CB freq's are CB's.

Yep - Although the international emergency number (in any country) is supposed to be 112 - You can even dial this with no simcard or the kepad locked.

Hearing rumors already that GRE version won't follow the system
by monitoring the data channel continously as the Uniden model
does and the Ericsson radios do. Instead, it will use another
method, that may not be near as effective. It may have a couple
of other gee whiz items but unless it comes out for the same
price (don't hold yer breath!) or has alpha tagging (ditto comment),
it is a repackaged version of something that already works well.

What's the big deal of the battery pack? If you are 'thrifty', as I
am, and would rather build your own packs, visit Radio Shack.
They have a carousel battery display that has a nicad recycle
box on top (at least mine does) for customers to chuck their old
packs in. With permission, I hacked off a handful of these
connectors and make my own packs. This is NOT a Uniden
connector. It is a VERY common connector used on cordless
phones. I have another handheld scanner that uses individual
nicads rather than a pre-made pack. Removing and replacing
the individual cells takes longer than the plug and chug of the
pack but I agree it would give you the option of using standard
alkalines (do that a few times and you could have bought another
nicad pack!).

Don't be too quick to praise a radio that hasn't hit the market and
survived a NG's nit picking yet! ;-)

Robert

Spacelord wrote:

Actually you can get some Motorola's into a diagnostics mode using a simple jumper. You could do many things including monitoring different cell channels. Could have done it about a year ago with a Motorola flip phone. Info could have been found...on the net. Fairly easy if you know how to use a search engine and your mind. :-)

852. _Vandenberg AFB Launch Schedule

Newsgroup: rec.radio.scanner
Date: 1999-08-10 00:00:00 UTC
From: Brian Webb <102670.1206@CompuServe.COM>
Message-ID: <7oo1bb$84n$3@ssauraaa-i-1.production.compuserve.com>
Source record: 110507

Vandenberg AFB Launch Schedule
As of Monday AUG 09 15:10 PDT

Launch
Time/Window Launch
Date (PST/PDT) Vehicle Comments

AUG 20 01:45-07:45 Minuteman III ICBM test launch (non-orbital). First
missile

AUG 20 01:45-07:45 Minuteman III ICBM test launch (non-orbital). Second
missile

SEP 03 11:21-11:51 Athena II Payload is Ikonos 2 satellite

SEP 15 05:30-09:30 Minotaur Payload is ASUSat, FalconSat, OCS, and
Opal satellites

SEP 19 Unknown Titan II Payload is DMSP satellite

SEP 29 19:00-23:30 Minuteman II Missile defense test. Vehicle will send
simulated warheads downrange. A second
missile will attempt to intercept the
simulated warheads.

OCT 05 00:12-00:20? Taurus Payload is KOMPSAT satellite

OCT 21 Unknown Delta II Payload is Iridium satellites

OCT 27 00:01-06:01 Minuteman III ICBM test launch (non-orbital)

NOV 12 Unknown Pegasus XL Payload is TSX-5 satellite. Missile will
be launched from aircraft staged from
Vandenberg AFB

DEC 15 Unknown Delta II Payload is EO-1 and SAC-C satellites

JAN 18 19:00-23:30 Minuteman II Missile defense test. Vehicle will send
simulated warheads downrange.

Notes

1. The above schedule only lists events that have been officially scheduled by
the 30th Space Wing at Vandenberg AFB.

2. All launch dates and times are given in Pacific Time using 24-hour military
time. Here are some sample time conversions:

00:00 = Midnight
07:00 = 7:00 a.m.
13:00 = 1:00 p.m.
23:00 = 11:00 p.m.

The above schedule makes no distinction between Pacific Standard Time (PST) and Pacific Daylight Savings Time (PDT). PST is in effect from the last Sunday in October to the first Sunday in April. PDT is in effect from the first Sunday in April to the last Sunday in October.

3. The Pacific Time zone lags UTC by 7 or 8 hours, depending on the time of year. The time difference is as follows:

1998 OCT 31 - 1999 APR 03: Pacific Time = UTC - 8 hrs.
1999 APR 03 - 1999 OCT 31: Pacific Time = UTC - 7 hrs.

4. With the exception of Minuteman III and Peacekeeper launches, launch dates are fluid and tend to change over time.

5. Launches for all vehicles except the Pegasus XL are scheduled for the start of the launch window. Pegasus XL launch times are scheduled for the middle of the launch window.

6. Prior to the launch of a classified payload, the exact launch time is kept secret until about T-18 to T-4 hours. The launch window is also secret. Instead of providing the launch window, the Air Force announces a launch period. A launch period is a large block of time within which the launch window falls.

7. Minuteman III and Peacekeeper missiles are usually launched on the first attempt and on-time. Delta II and Titan IV launch attempts scheduled for October through February are prone to last minute cancellation due to upper level winds.

8. For the current status of a pending launch, consult these sources:

Vandenberg Launch Update Line: 805-606-1857

Boeing Delta Launch Hotline: 714-896-4770

Florida Today Web Site: http://www.flatoday.com/space
An excellent source of information. On launch day, a web page with the latest countdown status will be added to the space section of this web site. Beginning at about T-30 minutes, be sure to hit the Reload button on your web browser every few minutes to get the latest countdown status.

30th Space Wing Public Affairs Office: 805-606-3595
This office is manned Monday to Friday from 07:30-16:60 and from T-1 hour to T+1 hour on launch day.

9. The above schedule was compiled from unclassified information approved for release to the public.

Radio Shack is discontinuing and I can get one for $35.00 locally I want to get into scanning but want to make sure it is something I really like before I spend big bucks. Is this a good scanner for a beginner? BearCat 60 is also available local for about 50.00.

: Not all fresh water is all that fresh. If they have hard water then you
: really need to flush it with something like distilled.

Not only that, but as this was water from a water bed, there are probably
additives added to it(a algaecide is the most likely)-I don't know what
effect these chemicals might have on his unit, which is why I mentioned
that a fresh water rinse MIGHT be useful

: One problem with just letting it air dry is that there can still be water
: trapped inside after a week. Elevating the temperature a little (to, say,
: 100 degrees) helps to get rid of that trapped water.

Agreed, which is why I discussed using a hair dryer(however I DO agree
that caution is needed).

POC32 is good as a pocsag only decoder but lags behind developmentally
as it does not do flex or golay. Go to
http://home.pacbell.net/kaliber/Index2.htm and go to the "Techno
Freebie " pages and get winflex...it does everything and even 4 level
flex...!!

Mark,
In the CD databases available for $29 ..there are over 1484
frequencies for pagers in the Fresno metro area and dozens of times
that for the county. Virtually EVERY assignable frequency in the FCC
paging freq database is assigned in Fresno ...many frequencies with
several licensees ...!! Just plug in all the standard assignable pager
freqs and you will get transmissions (nonstop) on ALL of them.

Looking for a scanner for my radio room, that is a base unit, with options
for multiple bands, and some bells and whistles.

Mainly interested in listening in on the following:

Air traffic at local airport
Space shuttle activities, (when applicable)
Police/fire/emergency

Other 'not-so-legal' public transmissions.

Perhaps someone would kindly make some suggestions?

Salt Lake City isn't trunked (emergency), Salt Lake County Fire isn't,
Sheriff's is converting over so currently is running both trunked and
VHF. They are running type II so no fleet map is necessary.

Yes the Pro-92 looks like a BC245XLT killer also.

NEW 500-CHANNEL MULTI-TRUNKING SCANNER WITH ALPHANUMERIC DISPLAY AND MEMORY CLONING
PRO-92 Follows analog Motorola I,II,I/II, GE/Ericsson and Johnson/Uniden trunked systems. Scans up to 10 trunked systems at the same time or trunked and conventional channels together. Enter names of services into memory and see them on the 4-line display as you scan. Features include weather alert with SAME (specific area message encoding), CTCSS/DCS decode and cloning interface. *With an optional cable, all memory information can be cloned from one PRO-92 to another.

Model: 20-522
Price: $349.99
Freq range: 29-54, 108-174, 380-512, 806-960 (excluding cellular)
Power: Requires 6 "AA" batteries or adapter. AC #273-1767/H, DC #273-1810/H
Jacks: Earphone, antenna (BNC), power, PC Interface
Includes: Detachable flexible antenna, belt clip.
Size: 6 5/16 x 2 5/8 x 1 3/4

There is also a Pro-94 and a Pro-2052. All of these radios will do EDACS and Motorola. The Pro-92 also does LTR.

I just replaced the light in my 2005, and it not that easy, but can be done by anyone with a soldering iron and a little common sense. It is not a bulb on the 2005, and I doubt that the 2006 is any different, It is a luminescent panel that costs about thirty bucks. The old won is glued in and the glue spot must be chipped away: No sweat. I saw no need to glue the old one in place. If you need detailed instructions, I'll see what I can do.

>It figures I would get a smart aleck to reply, just my luck I suppose.
>

Naw, jerks just come with the territory... The reason your $200 scanner is virtually impossible to modify is that the manufacturer encased most (if not all) of the freq-modifiable circuitry in a VERY hard, black epoxy resin (or something like it)... I have been inside the 2066 and can say that for all intents and purposes, this part of the circuit board is off-limits. It's beyond my tinkering/experimenting abilities to remove this resin, without cracking, and therefore destroying, the circuit board.
There might be a chance of using "virtual downconversion", whereby you tune in freq's below the 800 cell band at harmonics of that band, and with some filtering or some such circuitry (can you tell I've never tried it?) you can hear cleaned-up images of the cell bands.
But other than trying to do a search to find out about VDC, you don't have much of a chance of getting that rig modified. If you REALLY have to listen to cell bands, etc., you'll likely have to get an older scanner, or maybe one of the newer scanners that can be VDC'ed.
The Uniden BC9000XLT is easy to use for image reception of cell/cordless comm's. But at about $350 or so, it may be above your wallet's desires? :-)
At any rate, I find cell monitoring to be as exciting as watching paint dry. Haven't done it in years, because it's SO boring. But that's not up to me, you do what you must.
Good luck, and don't be too mad at your 2066. It's a good, respectable scanner for its intended purposes, and it's not really the fault of the maker but of Congressional paranoia and lobbying idiots!
Mike

What type of scanner is right for you depends largely upon where you are and what you want to listen to. I'm not familiar with the Pro-70 but I assume this is a conventional (non-trunking) scanner.

You must first look at the frequencies you're going to want to monitor. Are they 800 MHz or greater? For this you'll need an 800 MHz scanner. Are you interested in listening to "trunked" systems. If you're not familiar with trunking I'll quickly explain.

Trunking is a process that makes a pool of frequencies available to a group of users. The number of channels or talkgroups is greater than the number of talkgroups on a particular system. This is achieved by the fact that all of the groups do not use all of the frequencies simultaneously.

I hope this gets you started or at least gives you something to work off of.

Source record: 110538

It is quite possible to build any type of radio device you can dream of, however there are considerable limitations that appear almost immediately; cost and technical ability, both of which would preclude almost anyone from attempting to build something like this outright.

If you have the budget you can purchase an off the shelf, electronics warfare system which will permit you to transmit with great power over the majority of the radio spectrum, however these run into the millions of dollars with a basic system at around 35,000.

You would need to be more specific as to the frequency ranges you want to work on, which will make the possible creation of something like this more feasible.

For standard WFM you can buy a simple hobby FM kit from Radio Shack and can be on the air in hours with the range you indicated, with some modifications you could increase the range and power but you would violate the FCC acceptance for the device if you did.

As for scanning, there are build it yourself , 2 channel manual scanners which will monitor 2 preset frequencies; this is the closest to build it yourself that I think you could get without greatly exceeding the reasonable cost or technical factors.

Good luck.

Message-ID: <19990810130508.15352.00000074@ng-cf1.aol.com>
Source record: 110539

In the UK I have seen a device attached to a ticket vending machine and on some other vending kiosks around Europe; when I spoke with a person refilling one he said they were linked to the owners of the machines or the service company who check activity, product levels and track alarms.

They are transmitting at around 460 MHz, with data bursts on a pre set schedule or if the alarm is activated; either power loss, refill need, tip over or break in.

A frequency counter would reveal the exact frequency if you monitor it at close range, as for content it would be data signals.

I understand there are some firms here in the US selling similar systems for vending machines, which are nothing new by way of remote systems monitoring by third parties or service centers.

Hope this helps.

My SC150 will scan all programmed banks, you can lock out any bank you
don't want to scan. You can also scan just bank one or just the first
channel of each bank.

889. Re: CELL PHONES AT GAS STATIONS

Newsgroup: rec.radio.scanner
Date: 1999-08-11 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <7oru25jkp1@oak.prod.itd.earthlink.net>
Source record: 110294

Hey, it's not the talking on the cell phone, otherwise there would
be tons of accidents blamed on CB and HAM operators. Hmm,
I have to admit I've been distracted by trying to reprogram, or
in the past in my attempts to run CW in the car. But how do we
take this? To the point that it's illegal to change a CD or a
cassette without pulling over?

Realistically, I see the big problem with trying to dial the stupid
phone while driving. Not with talking or the actual communication
aspect. Although there is possibly another issue with people
trying to hold those little tiny phones to drive. Hands free kits
counter that arguement. I know, make the government mandate
free hands-free kits for everyone!!

The gas station issue is BS. Urban legend, the way it's presented.
I read that there was ZERO chance of problem from the use of
a cell phone at a station causing a spark. But there IS an issue
with a dropped phone knocking the battery off and sparking, but
how far do we take that? Have automakers put a total disconnect
on the battery that must be thrown to fill since there could be a bad
connection to your stereo? Or even make everyone shut off 50 feet
before the pump, and have the tracks like car washes do to pull
your car in, then fill it, then pull you away before you're allowed to
activate your starter?

If you're REALLY that paranoid about the guy in the car next to you
at the station using his cell phone, get a life!

Mike Yetsko

890. Re: Homebrew Mobile Scanner Antenna

Newsgroup: rec.radio.scanner
Date: 1999-08-11 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <7oru4rjpc1@oak.prod.itd.earthlink.net>
Source record: 110295

The big problem with CB antennas for scanners is that they are
'tuned' to be CB antennas. You don't get something for nothing,
so every extra bit of gain for CB means loss elsewhere in the
spectrum. And all CB antennas other than the 9' whips are
tuned somehow for CB.

You might get decent performance from the 4' whips that are
'top loaded', since they have over 3 feet of antenna that isn't
tuned and the top coil would be high impedance to signals
out of the CB Band. Or if you bought one of the antennas that
were specified as being for CBs with weather channels, I
believe they bypass the CB resonant aspect of the antenna for
VHF high band (and probably through UHF).

But for a scanner you'd probably just do best by a straight wire.
If you got an old CB antenna you don't care about, just open the
coil, and cut the thing out of the circuit, leaving only the center
conductor of the coax connected to the whip, and you'd probably
do quite well.

Alpha tagging is the ability to enter the name of a service that's
programmed into a scanner. When the scanner stops on that freq the
name of the service is shown on the scanner display. The Bearcat
BC9000XLT is one example of a scanner with alpha tagging.

Hey, no problem, pal. I am no expert, it's just my particular experience with that radio. It's a good one, though! :-)
Try looking into (don't kill me!) E-BAY and ask around in the scanner rooms, for an older scanner that covers that range, if you really want to listen in. It can be fun, and it can never hurt to have ANOTHER scanner, right? :-)
Glad to be of help!
Mike

I just want the name of the guy who offered to send him $895.00 cash, sight unseen, with no names exchanged. I have a bridge for sale up in Brooklyn the guy might be interested in. Heck, he could put toll booths at each end and recoup his investment in no time. ;-)
If he's not interested in the bridge, there is quite a bit of undeveloped land between Naples and Fort Lauderdale I could let him have at a real good price.

Source record: 110316

Hi, and Thanks for taking the time to read this... I was wondering if anyone knows of any mods for the above listed scanner?? I would be particularly interested in finding out how
to increase the delay time when searching a frequency range... or maybe continuous coverage from 29 Mhz to 514 Mhz?? (Doubt that one... but ... You never know...)

Thanks, again.

Kevin.

No; converter merely provides a -400 MHz conversion. [800MHz Freq] - 400 = Freq
to pgm on scanner.

You may want to try searching http://www.ebay.com

There is often times quite a variety of radios offered for auction there.

There is a radio warehouse, selling surplus equipment that maintains a detailed
list of current offers

Alpha Tags are were you can program a description into your scanner describing each frequency. For example Ch1 may be frequency xxx.0000, you could program the display to read Your City F.D. instead of displaying the frequency. Alpha tags are real handy when you have alot of frequencies in a scanner and you don't want to have to keep saying "now who is that"....

From: Bach Skarz <boxcars98@yahoo.com>
Message-ID: <tnss3.1025$9n6.94644@newsgate.direct.ca>
Source record: 110332

I've got an old 8 channel Unimetrics DigiScan 8 crystal scanner that I want to put into service. When I picked it up (used, a few years back) it didn't have any crystals installed. I know it has a 10.7 MHz IF, but I'm wondering if I can just swap in Radio Shack crystals, as they're probably a hellava lot easier to come by. Or do I have to have crystals made specifically for Unimetrics equipment?

And for that matter, does anyone know if Unimetrics is even around in any way, shape or form these days?

Much appreciated,

Paul

Average range is about 3/4 of a mile. sometimes more, sometimes less.

>I will be using them for a variety of functions, but am most interested in
>using them in the desert while using my dune buggy. Will they go 3 miles over
>flat/desert terrain?

That may be possible.. in an open air vehicle, in a totally barren area
3 miles is not unheard of.

>Do the line of sight rules exist on a radio that is only 500 Mw? If I am on
>top of a hill 12 miles from the other radio, but can see the other radio
>location, will they make the stretch?

Again, possible.. but that is seriously pushing it. There have been
astounding range reports... 50 miles+ when one user was on top of a mountain.

This is not my computer.
I don't own a computer.
I'm here while the owner of this computer is at work.
If i did put up a picture, how would you know if it was for real or a
phony?
I need the money ASAP.
This is something that i can't be put on Ebay and ect.
If you don't know this receiver, then don't bid on it.
I was hoping to find a couple of people who know what i have.
This radio is NOT for the general scanning population and WILL be out
of their price range.

When you see the "Starting Windows 98" message on the screen, press
F8. (You have about 1 second before the boot process continues.)
You'll get a menu of boot options. Choose the one you want, probably
"Command Line Only".

Source record: 110421

Offutt AFB at Omaha, NE is due to have their airshow in a couple of weeks. I haven't heard yet if any demo teams (T-birds, Blue Angels, etc...) will be there or not; but I was wondering if anyone had any base/airfield/airshow freqs that I could punch into my scanner to keep track of things.
Thanks in advance!!

Russ

..er...this is the usual "crippled clone" of a scanner isn't it....the
BC245XLT has been out for over a month now and as usual RS follows up with
their high priced version....it may blow the doors off the store but not the
scanner market....it'll probably receive so many cell images that RS will have
to "recall" it ....(8>).......

Sorry sir.
This is not for you then.
Cash only!
Maybe i made a mistake posting this here.
I do not know where else to sell it though.
Maybe i should sell my car instead and ride a bus and/or train.

No, i do not know your price range.
I do know that it was a mistake to post my radio here.
I was hoping to get a better response than this.
Darrel or whoever threatend to contact the FEDS on me.
I may sell my car insted.
Thanks for your interest.
I'm going to leave soon and hope i don't get my friend in trouble over
this while using his computer.

FYI: One of the new Rat Scack radios will be made by GRE, not Uniden.
So take that.
P.S. it will take AA batteries instead of the old Uniden battery pack
scam.

All,

Below is an e-mail exchange. My comments are prefaced by JTWARD, his comments are prefaced by SPACELORD. Buyer beware, that's for sure.

From: mgd99@usa.net
To: JTWard01@aol.com

JTWARD -
"You have to understand, many people, myself included, have never heard of the radio you describe, and while I don't doubt the radio exists, I have no idea what a fair price would be (or no way of knowing if you really have one, for that matter)."

SPACELORD -
My post was not aimed toward the general scanning population.
I am hoping that a couple people will see my post that know what i have.
People are making jokes about my post.

JTWARD -
"You really need to at least establish a minimum bid. Also, asking folks to send cash via FED-X to someone they've never met is asking them to make a tremendous leap of faith when there are so many Internet ripoff artists working today."

SPACELORD -
Have you ever bought a radio over the internet?
Sending a check or money order is a leap of faith also.
Didn't you buy a UBC 3000 over the net with a leap of faith?
I believe you have, but i may be wrong.

JTWARD -
"Even FED-X prints right on their envelopes "DO NOT SEND CASH." Anyone following your directions has absolutely no protection, as the name you give can be completely false since you won't need a bank account or any ID as you would if the person were sending a check or money order."

SPACELORD -
I want cash for my protection along with the buyer.
I will not accept a paper trial for this radio.
How do i know that it's not the FED who is sending me a money order?
Besides, if you have a friend, a money order will not give you any more protection. I know of people who cash stolen unemployment checks with a stamp that's unreadable.

JTWARD -
" I'd be more inclined to send the money via Western Union. You'd
still get it in one day, but you would have to produce two IDs before you
could pick up the money. At least I'd know for sure who I was dealing with if
you tried a rip-off."

SPACELOONEY -
I'm not authorised to have this radio.
I can't sell it on Ebay and i don't want the the serial number to be tracked
to a possible subject.
Maybe i'll scratch it off. But it's possible that the # is inside the radio.
I'm scared about this.
I'm using a computer that is not mine.
I'm hear alone with it until a couple of hours.
The owner has no idea i'm posting this.
Cheers!

Hello to all;

Thanks for taking the time to read and respond.
I have for sale a RadioShack 150-Channel Mobile scanner.
It is the PRO-2066 Catalogue # 20-195.
Features;
Data skip
Trunking mode
Hypersearch
Nine preset service banks
Hyperscan
Limit search
Plus lots more too numerous to mention.
With box and manuals
Asking price is $160.00

If you are interested please leave me a note at the following

The Optoelectronics Cub minicounter costs $150 new from Opto. If you have a used one you don't want/need anymore, I will buy it from you. It doesn't have to be in excellent condition, as long as it works fine. It doesn't matter if it's scratched, or doesn't look so great. A face to face sale would be preferable but is not neccessary. Please post your reply to the alt.radio.scanner newsgroup.

Thanks,
Parallax

Being able to alphanumerically label a frequency programmed in as a scanner channel. For example, you could punch in 158.100MHz & store it in your scanner, then have your scanner display "SIU TAC-3" whenever the scanner stops on that freq.

I have a PRO-26 available from Tandys - that is an excellent scanner and
is about ï¿½180 at the moment

I have the ICOM R2 also - you set the frequencies with a knob and then
scan - you can't input anything as you said as you don't have a keypad.
But don't be put off for ï¿½130 it is bloody good value. I love it

Thanks for the information. That's more than I was able to learn about the scanner than from all the sites on the web I visited, I just couldn't comprehend what made it so impossible to modify it but you explained it very well. By the way I'm not completely unsatisfied with the scanner, it's just that it would have been nice to also listen to cell calls, otherwise the only complaint I have with it is that some backlit controls would be nice at night. Thanks again for the insight, I really do appreciate it!

Frank,
Does this happen on many frequencies or just one? What does
it sound like with the squelch all the way open? Does it fade in and out
wave like or just flat cut out (with squelch open?). Long shot, if you
wiggle and shake or tap radio when not moving what happens? Same with
antenna and coax?

Frank Carson <frcarson@ios.com> wrote in message
news:37B32943.1A9C9A57@ios.com...
> I have a PRO2026 scanner in my car. It is hooked up to a RS magnetic
mount antenna on the trunk. It works fine sitting still, but when I start
to move the transmissions are all chopped up, like the reception is bad,
though I live in an urban area. The "chopping" is not consistant with
interference from the alternator. I have tried two of the same model of
antenna with the same results. Same problem, differant car, too. Any
suggestions, or was the purchase of the antenna a bad choice <BG>. Thanks.

What uninformed reader would post a question like this??? ;-)

Continuous coverage...you got one for sale and I will gladly pay $150 for
it. I was pleasantly surprised to see Bill selling his for $200, most
continuous coverage radios are way over priced.

At least you spell your name right. :-0

This should be public info. Can one telephone an agency and
ask what frequencies they are using? I have done it on a local
municipal level.

CHECK THE ANTENNA! A bunch of these radios went out the last couple years with defective rubber-ducky antennas. The center pin would disconnect from inside the antenna and stay lodged in the BNC female on the radio. Once that happens, that antenna is shot...it won't make reliable contact any more even if you try to jam it back together. And if that pin is stuck in the radio, any other antenna wont plug in right (if at all). If that's what's happened to you, take a needle nose and pull the pin from the radio, and get yourself a new antenna.

Bearcat has been erratic about replacing these antennas for free, even though it's been a common problem.

to reset the radio, hold down the 2, 9 and MANUAL while tuirning the radio on...zeroes everything out. Same procedure works on almost all Uniden/Bearcat scanners

Health concerns from radar guns? I remember a story that GG Liddy was relating about some American personnel stationed at the embassy in Moscow, Russia many years ago.

Anyhoo, the Muscovite Police Force had just acquired Radar Guns for speed enforcement and were quite handy with their new toys. Two Americans with law enforcement experience struck up a conversation with two of these Policemen outside the embassy. The Russian officers were very proud of their Radar equipment and the Americans chimed in with the admiration.

Then one of the Americans said: "So...what do you do, trade off the gun between you two for your 20 minutes a day?"

"20 minutes a day?" asked the puzzled policemen. The Americans acted incredulous and advised "You do know that more than 20 minutes of operation of that gun a day will make you sterile? Don't you?"

The story goes that the Americans never saw a Russian policeman using a radar gun for the rest of their tour in Moscow.

Here are some frequencies for California State Fair/Cal Expo, that I have monitored. Try these begining May 20 to September 6 this year. I have heard these over twenty miles away, seriously, at my home. I live in Sacramento. I will try to listen for frequencies this year too.

SECURITY: 453.150, 453.350, 474.850
PERFORMERS? : 453.750
CARNIE MICROPHONE: 472.350 and 450.650 (same microphone)
UNKNOWN AUDIO: 458.512
? (might not be a Fair frequency, not sure) : 484.150

CA State Fair web page: http://www.bigfun.org/
Or try: http://www.calexpo.org/

The Nevada State Fair begins August 25, ends on the 29, at the Reno Livestock Event Center, a common venue for concerts. Call 688-5767 for details.

Please update this list of CA State Fair frequencies, and tell me any NV fair or Oregon Fair frequencies you know of.

I am not, and I have copies of my birth certificate and my parents' marriage license to prove it.

>JT, are you so mad because you can't afford this radio?

I'm not mad at all. Heck, this has been fun. You are right about one thing, though. I can't afford the radio. My budget for vaporware is zero.

>Go away you troll.

Now if that ain't the pot calling the kettle black. But I am gonna stop posting to this thread. Frankly, I'm bored with it.
You gotta admit, though, you set yourself up for this one. Advertising a radio no one has heard of, then demanding a cash payment without verification of your identity. That really is absurd.
Look, if you really do have such a radio and if you really do need the money all that badly, well, good luck to you. You might call Fair Radio Sales, or Grove Enterprises, or EDCO or any of the companies that sell to government agencies. Perhaps they'd be willing to take the radio off your hands. Sure, there would be a paper trail, but at least you'd be selling it to a licensed dealer with government purchase contracts. Just an idea.

991. Minnesota Agencies Announce New Radio System

Newsgroup: rec.radio.scanner
Date: 1999-08-12 00:00:00 UTC
From: khaas <khaas@FFFFFFflash.net>
Message-ID: <Fkps3.498$%Y3.2018@news.flash.net>
Source record: 110247

For what it's worth, news clip about Mn new radio system.

Minnesota Agencies Formally Announce New, Multi-Agency Radio System

MINNEAPOLIS (Aug. 9, 1999) -- The Minnesota Department of Public Safety, the Minnesota Department of Transportation, Hennepin County, Metropolitan Council, and the city of Minneapolis today jointly announced that contracts have been completed and construction has begun on the infrastructure for their new, shared public-safety radio system.

The announcement was made at special ceremonies held at the Hennepin County Government Center Plaza. The contract for the 800 MHz Motorola ASTRO SmartZone(tm) digital system totals $65 million between the four agencies, and includes infrastructure and subscriber, or mobile and portable, units. The installation of the system is expected to be complete in less than three years.

The implementation of a regional, shared communications system has been a long-standing vision of local public-safety officials.

"One radio system used by all state, county and city law enforcement agencies makes good operational and economic sense," said Governor Jesse Ventura. "We can save taxpayers money by operating on one system while providing state-of-the-art radio communications for any type of public safety emergency."

Many local, county and state officials were on hand to celebrate the announcement including Minnesota Department of Public Safety Commissioner Charles Weaver, Hennepin County Sheriff Patrick D. McGowan, Metropolitan Council Chair Ted Mondale, Dave McCauley, chair of the Metropolitan Radio Board, Sandra Colvin Roy, city of Minneapolis council member, Hennepin County Commissioner Penny Steele, Minnesota State Senator Steve Kelley from St. Louis Park, and representatives from the Minnesota Department of Transportation.

"This radio project is an example of teamwork among public safety agencies at all levels," said State Public Safety Commissioner Charlie Weaver. "The radio system is an effective communications tool for all public safety users who have a critical need to talk to each other, especially during a multi-jurisdictional response."

The announcement coincided with the opening of the Association of Public-Safety Communications Officials-International (APCO) annual conference at the Minneapolis Convention Center. APCO is the largest worldwide association of public-safety communications professionals. Diana Borash, a dispatch supervisor with the city of Minneapolis, and local APCO

chair for the annual conference, also was on hand for the announcement.

"The radio project is a great example of business and government working together and it's a smart investment for the region," said Metropolitan Council Chair Ted Mondale. "As the region continues to grow, so does its communications needs. This is the kind of cooperation we need to preserve and improve our region's quality of life."

The new system will replace many individual communications systems operated by local agencies. While the agencies using the system will share a common system infrastructure, each will be able to communicate privately with its own personnel. Sharing the system infrastructure will make routine and emergency inter-agency communications easier to perform and more reliable.

"This new system is an infrastructure investment for the city of Minneapolis and the other participating jurisdictions that will improve communication between police officers, firefighters, paramedics and other members of the public-safety community," said Joan Campbell, city of Minneapolis council member, who also serves as the city representative to the Metropolitan Radio Board.

Hennepin County Sheriff Patrick D. McGowan agreed that the communications links and compatibility between public-safety agencies provided by the new 800 MHz digital communications system will be an invaluable tool in enhancing public-safety for thousands of Minnesotans.

"Sadly, we have all seen just how important a rapid, coordinated law enforcement response can be when tragic events escalate into major public-safety threats," said Sheriff McGowan. "This new communications system is vital to the inter-agency response and rapid communications needed today and I am very pleased that 800 MHz is becoming a reality in our area, specifically for Hennepin County."

The system also will enhance communications for other government agencies.

"When completed, the Twin Cities regional radio system will enable MN/DOT service providers, such as snowplow operators and Highway Helpers, to operate more effectively and support other agencies' missions when needed," said Elwyn Tinklenberg, commissioner of the Minnesota Department of Transportation.

Other local, county and state officials also emphasized that the new system is an especially cost-effective choice for the region.

"This technology will enable public-safety personnel to communicate much more efficiently, making sure that we get even more from the tax dollars we put into our public-safety system," said Randy Johnson, chair, Hennepin County Board of Commissioners. "Existing communications equipment in many metro communities has reached the end of its useful life, and the new digital technology is here just when we need it."

According to Dave McCauley, chair of the Metropolitan Radio Board, every local unit of government has been working hard to squeeze their budgets into

a very tight tax revenue box. This reality has made any new effort like the radio project an enormous challenge to develop, finance and implement. However, he said those agencies that will use the new system succeeded in making it a reality because of two critical factors.

"The first factor is that this is a shared system," said McCauley. "State, federal and local governments are cooperative partners in the design, construction and operation of this regional radio system. Sharing means elimination of duplication, more efficient use of antenna towers and equipment, and lower investment costs for all. The second critical feature of the regional system is that participation is voluntary. Cities and counties can get maximum use out of their existing radio equipment and can plan their move to the new system later. We are most fortunate that the Minnesota legislature structured the initial financing so that there is no penalty for governments that choose to delay their conversion to the system."

The system will use simulcast technology that broadcasts the same messages from every system repeater, or antenna, site at the same time. This will help enhance in-building and wide-area communications coverage to benefit important local law enforcement initiatives, including the Gang Strike Task Force and community-oriented policing. The system also was designed to allow personnel to travel throughout the metropolitan area and still be in contact with their agencies.

Since the Minnesota system is compliant with the Project 25 standard for public-safety communications systems, it will incorporate what's called an "open system architecture." This means city, state, county and metro regional agencies will be able to add equipment to the system in the future from any manufacturer of Project 25 compliant equipment.

"The technology included in this new, shared system is the most sophisticated digital technology available today," said Ken Denslow, vice president and general manager, Motorola Northern Sales Division. "The system has been carefully designed to provide the features and capabilities public-safety agencies need today, accommodate new technologies in the future, and provide the capacity to serve other agencies in the region for years to come."

E.F. Johnson of Waseca, Minn., a subsidiary of Transcrypt International, is currently negotiating with Motorola to provide the system's mutual aid equipment.

Harris Corporation's Microwave Communications Division will supply the microwave and fiber backbone for this public safety network. The microwave and fiber system will provide state-of-the-art redundant routes around the network for ultimate reliability. Harris will also supply digital interfaces to all of the metro sites as well as offer upgradability for future counties and government agencies joining the network.

"The state selected Harris for this system on the basis of the reliability of our products and our ability to quickly implement their network," said

Neal Salzman, Sr. Sales Engineer, Harris Corporation, Microwave Communications Division. "Harris is very pleased to be participating in this project and reaffirming our commitment to the public safety communications industry, while once again working with Motorola."

The new shared 800 MHz Motorola ASTRO&#65533; SmartZone(tm) digital trunked radio system is especially significant for Minnesota and APCO because it is the first radio system in the United States to deliver fully digital, narrowband and simulcast technologies compliant with the Project 25 standard for public-safety communications systems. Project 25 is the functional and technical standard, adopted by a consortium of public-safety communications user groups, that established the foundation for digital communications interoperability, efficient spectrum utilization and competition among suppliers of compliant equipment. APCO led a number of user groups in the development of the standard.

Perhaps the next time you post an eBay auction, you post the incident
number to search on, or the URL to the auction page, as no one [at least
I wouldn't] will go searching for your item there.

Has anyone experienced with the Orange County Fire North trunk system? Have they changed any of the freq's or the fleetmap? I have 3 TrunkTrackers and the tracking seems screwy. At times two radios will pick up a conversation that the other one will not. Other times one radio will hear a conversation that the other two don't.

Any help appreciated.

BTW, I don't think it has anything to do with the way the radio is programmed. I didn't change anything and they're all programmed the same. Leads me to believe that it's a fleetmap thing.

I think in this ng, (IMHO) that if you want to bother people with selling your item, at *LEAST* put the item information in your post, and not just a URL to the page that you have it listed... A complete waste of bandwidth, again IMHO...

It apears that my 245 is following the system traffic OK but the 895 and the Pro-90 are a NO GO. I get nothing but the "- - - - -" search bars in ID search mode and the scanners do not stop in trunk scanning mode. Does anyone have any idea what's up with that?

Hi, Chuck:

Greetings from up the road in Non-Trunked Los Angeles LAFD land :)

Just a guess here, but perhaps the 895 and Pro-90 are not capable of scanning the type of trunking system that the OCFA uses? I know that the new 245 is capable of scanning Motorola systems while the Pro-90 could only work with GE systems.

Clark -

Do you access to an ATTIC in your Condo? I put my Dicone and CB Antenna's
up as well here for my set up. Work will and it don't fool with my rulely
neighbors about farms on the roof. Give it a try it might just work for
you if your attic access is in a room where you plan on having you shack
at in your condo unit.

Good luck!

>location, will they make the stretch?

Some Radio Shack models may have less than 1/2 watt. The record FRS is
something like 170 miles, using ducting. I have got solid
line of sight reception, at 4 miles. Up to 10 miles line of sight could
easily be expected. If anything is in the way, drop it way down. If there
is a hill in the way, it will kill most of the signal. 1/2 watt is pretty
good. Thats about what cell phones have, except the base stations have gain
antennas increasing reliable range. The atmospheric conditions along
the ground will affect the transmissions, and ducting can occur with
temperature differentials.

What I would like to know is, why I have not seen ac powerd base units for
sale, or is this against the FRS principal. Using batteries is a pain!

When anything like that is spilled, including orange juice, Coke, and beer,
immediately drench it with distilled water. You might just have tap water
on hand, but use distilled water soon after using regular tap. This
will insure a better outcome than when leaving that stuff on the boards.
Regular tuner cleaners don't disolve water based solutions well.

My Maxon has a jack for a wall wart, and I know a number of others do
to.

I've seen speakers and mics.

The only 'hard attached' item I believe is the antenna.

hi, i found this old pro-2021 scanner in my basement, i am quite intrigued by it, but havent really found much to do with it. i punched in some numbers and i havent heard anything yet. i just want to make sure that im doing this right.
i found this on the net somewhere (read below it too)

CHANNEL BASE HANDSET
Channel 01 43.720 48.760
Channel 02 43.740 48.840
Channel 03 43.820 48.860
Channel 04 43.840 48.920
Channel 05 43.920 49.000
Channel 06 43.960 49.080
Channel 07 44.120 49.100
Channel 08 44.160 49.160
Channel 09 44.108 49.200
Channel 10 44.200 49.240
Channel 11 44.320 49.280
Channel 12 44.360 49.360
Channel 13 44.400 49.400
Channel 14 44.460 49.460
Channel 15 44.480 49.500
Channel 16 46.610 49.670
Channel 17 46.630 49.845
Channel 18 46.670 49.860
Channel 19 46.710 49.770
Channel 20 46.730 49.875
Channel 21 46.770 49.830
Channel 22 46.830 49.890
Channel 23 46.870 49.930
Channel 24 46.930 49.990
Channel 25 46.970 49.970

so all i do is program that into my scanner and i will pick up some of my neighbors conversations? is there any other cool stuff i can do with it.
Please reply here or via email to pdub7@yahoo.com

Thanks in advance
peter

I got a preview look at the new RS catalog. They are coming out with 2 new handheld scanners. One is 500 and the other is 1000 channel, both are trunking and will do both the Moto system and the Johnson/Erricson systems. I thing the price on the 500 was 299.99, didn't catch the price on the 1000 channel. They are going to be a lot of other scanners at discontinued prices. Check it out.

Larry-

Thanks for the reply but no the OCFA operates on a Motorola Type I system with a custom fleetmap. The Pro-90/BC895 are able to track Motorola system and not EDACS, not the other way around. I used to be able to pickup the system on the Pro-90 but for some reason cannot now. The other 2 OC Fire systems seem to be coming in OK on the 90 and my BC895.

I'm still looking for an answer if anyone has any info. Here's what I've got programmed into the radio...

Freq's --
856.9625
857.4625
858.4625
859.4625
859.9625
860.4625

Fleetmap--
B0 = S2
B1 = S0
B2 = S0
B3 = S0
B4 = S13

Thanks!
Chuck

Dave,

Check with Jeff at The Ham Station at http://www.hamstation.com. He sent an 800MHz antenna with my 245XLT and it does make an improvement - not a lot, but noticable.

Not much else you can do with it Peter other than listen to communications of the Police, Fire Department, commercial and private planes, your county and city services, ham radio, satellites, taxis, cable company, power company, sporting event communications, special event communications, search and rescue, DOT, FBI, CIA, Army, Navy, Coast Guard, Marines and maybe a couple others. Nope, I think you cornered it with cordless phones. :-)

1016. Re: Some FRS Questions...

Newsgroup: rec.radio.scanner
Date: 1999-08-12 00:00:00 UTC
From: mrspadea@aol.com.HWR.ORG
Message-ID: <19990812132226.10528.00000075@ng-cn1.aol.com>
Source record: 110272

With FRS the requirements set forth by the FCC were that the antenna be fixed and power output be preset at a specific level.

As for a base station the guidelines would preclude not by regulation but by way of usefulness; with the same antenna and power standards as handhelds it would be a moot point to make a base station with such low power and a fixed antenna.

You could add an ac adapter to the radio and a microphone handset, you would then have a "base radio" that did not rely on battery power.

Should the industry lobby the FCC for base station acceptance the problem you would encounter with a FRS base station emitting higher power than the handhelds would be people in the field who could hear base but not the other way around, save for when and if the antenna could be a high gain type and mounted on a high point.

Basically with FRS you have an unlicensed short range communication service; should you need more than a 3 to 4 mile range it would be advisable to look into the GMRS or Ham licensing.

For further details on FRS and to visit some linked sites regarding GMRS, Ham, Scanning and related radio areas, see:

http://www.expage.com/page/pbfrs

The Palm Beach Family Radio Network and Scanner Page.

Hope this helps out.

Mouse,

Yes, worth it. The audio is better, and the programming is just
slightly more logical. I have one of both (actually, the '7100 is
a rebuilt damaged one, but still works), and the 7200 is the better.

You can also check "Computer Aided
Technologies WebSite at

http://www.scancat.com

or email at scancat@scancat.com

they have a line of "Hoka Code-3"
decoding software that looks like it covers all modes, including POCSAG.

Don't know how it compares in price or operation to the "win..." decoder
mentioned in the other response.

I found my answer my Socal911 as a matter of fact. I had a bogus freq
that I got from Bearcat1.com. Does Socal911 list fleetmaps for OCFA
anywhere on the site? I didn't see that but the info from Bearcat
seems to work.

Thanks!

I found the problem with the OCFA North System. The Bearcat1.com site has a bad frequency listed. The incorrect freq was a control channel and the 90 and the 895 were hitting this channel before the correct one resulting in improper tracking.

Below is a copy of the correction I sent to the site!

****BEGIN CORRECTION****
Just wanted to let you know there is an incorrect or changed frequency in the Orange County Fire Authority North System. Here are all of the correct freq's...

856.9625 857.2125 858.4625
859.4625 859.9625 860.4625

The frequency 857.4625 is incorrect and should be replaced with 857.2125 MHz

Thank You!

I would try to find a used Radio Shack (Tandy) Pro-51 scanner with a manufacture date prior to April 1995. This is an excelent 200 ch. scanner that covers the range you are looking for. This unit also can be easily modified to receive celular phones. You can get them for around $175.-$200. U.S. in good used condition.

I have heard that the 7200 has much better MW reception (ferrite loop)
and also narrower filters. My 7100 is as wide as a barn door.

1039. Re: ordering from canada

Newsgroup: rec.radio.scanner
Date: 1999-08-12 00:00:00 UTC
From: mrspadea@aol.com.HWR.ORG
Message-ID: <19990811200053.24650.00000157@ng-cn1.aol.com>
Source record: 110338

If you order a scanner that is prohibited by FCC regulations it may be detected at customs and would be confiscated as contraband.

As far as fines and possible visits from law enforcement that is a toss up, I have heard of some who were visited and fined and others who got letters; just as in the case of Cuban Cigars, if caught they are always confiscated and a fine is sometimes levied but sometimes not, but almost always a lecture is received about trading with the enemy.

(Yes, in some limited circumstances some persons are permitted to bring Cuban Cigars back but in such an extremely limited sense I toss it in as a similar example)

Just as any other item on the list of prohibited items the US Customs is out looking for there is a certain percentage that will inevitably pass through undetected but there is a lot of case history of seizures of all types.

The scanner could pass through undetected and arrive to you without a hitch, but possession of such a device is illegal as is using it to monitor frequencies which were covered under the federal laws enacted to protect cellular communications.

From information I have seen on newsgroups over the years, there is a large number of imported scanners that will cover the cellular gap, how they got here is probably split between some that were hand carried across the border, some that were taped to the undercarriage of motorhomes, some sent via carrier pigeons and others that came via UPS or other shipper.

Regardless of how, a lot are here and I would say about 60% are being used to monitor the cell bands, the rest are now devoted to other more interesting subjects after the novelty of hearing the same thing you can hear on cordless phones, ship to shore calls and air phones has passed.

Its a buyer beware situation.
Hope this helps a little.

Quit trying to undermine my sale you bastard.
I will have a manual xeroxed and ready to ship by Friday for the
people who really are interested in my radio.
My deadline on Monday will have to change because of that.
JT, are you so mad because you can't afford this radio?
What's the method behind your madness?

Go away you troll.

From: Donald Munson <demunsonjr@erols.com>
Message-ID: <37B4C413.436F4472@erols.com>
Source record: 110053

A more proper question would be: How much will it cost me to run an AC scanner in my car?

Yes it is possible. Go to an electronic supply store such as Rat Shack and purchase a DC to AC converter. Hook it to the battery and run the cables into the passenger compartment and hook up your scanner. Cost comes into play to make it look pretty.

Don

>I have a bearcat860xlt base scanner that uses a AC 10v 300ma adaptor,
>Is it possible to get this working in a car?>>

If there is AC going into the scanner I would bet it is getting converted to some form of usable DC not far into the circuitry. Best bet would be to get a schematic for the radio and see where you could possibly tap in to use a DC car adapter. A 12 V or even a lower voltage with a converter they sell at most radio type outlet could be soldered in. Just a thought.

After following a reffence to an old Popular Electronics article on boasting
the range of a part 15 27MHz "HT", I was impressed by the solution.

PArt 15 CB "toys" suffered from a 100mW input power limitation. Even if you could couple an external antenna, feedline losses would mount up fast. They mounted a 100mW CB in a metal mail box, remoted the TR, Speaker, and mic, and mounted the antenna to the mail box. I have tested that with a FRS unit, and it works "real good".
YMMV

Yes, you can run this radio off your car battery. Just be sure that you are connecting the correct center pole to the radio. What I'm saying is make sure to look at the radio to see if the center is pos. or neg. As long as you have that correct, then you won't blow up your radio. You can go to Radio Shack and get the DC power cord that you need. Good Luck.

I know of no speed radar units certified for police use that do this. Even the 'pulse' radar on K-band units still mix to get the mix of the outgoing with the reflected doppler shift. The 'pulse' is to 'shorten' the time the beam is on, no to provide any kind of reference. When the pulse units first came out, a lot of detectors wouldn't even detect them at all.

Message-ID: <37B41082.9171A792@sgi.net>
Source record: 110154

I visit OIB a couple times per yr., you might want to check out the following. OIB is located in Brunswick County, the county dispatches most if not all emergency services.

Brunswick County - PD = 453.450, 453.700,
453.450 is the PD dispatch frequency for all PD's in the county Shallotte, Ocean Isle Beach, Holden Beach Sunset Beach, Supply, Bolivia, Yaupon Beach, to name the majority.
LG = 453.575
EMS = 155.745, 155.340, 155.280
F = 153.830, 154.160, 154.415

Ocean Isle Beach (OIB) - LG = 453.475

Sunset Beach - LG = 453.725

Most all PD's have a marine frequency in there radios to communicate with the Coast Guard, I believe it is 157.10. The marine frequencies are quite busy with commercial and charter fishing boats. I enjoy listening to them. Use the frequency scan on your scanner and find the active frequencies.

PD = Police Dept., LG = Local Government, EMS = Medical, F = Fire

I used the scanner antenna that came with the scanner and would hear tons of frequencies. We are usually located in a beach house right on the water. Cross the bridge and turn right. There is great fishing from the end of the OIB Pier. I enjoy surf fishing.

Have a great time, it's a wonderful area to live or visit.

I am not an expert by any definition.
I use a Larson magnetic mount with a 1/4 wave 2mtr (18") "whip" on it.
Works great for 138 through 900. For serious 900MHz work I use a 800/900
antenna that uses the same base. I have used the later antenna for scanning
and 2mtr and 70 cm (and cell phone) ham radio. It is just under 17" and
presents a reasonable match to the antenna. Got the idea from another
NG and was surprised to see how well it worked. About like a 1/4 for both
2mtr and 70. I also have a 5/8 2mtr antenna that fits the same base, that
I use for (duh) 2mtr ham and serious 2mtr scanning.
Good luck

>Why would one believe they hear or read in the Media?
>

Perhaps because they're conditioned to. Not a nice answer but a valid one.
My question is, where do you draw the line between what is trustworthy and what isn't? It's an extreme position to blatantly dismiss out of hand ANY AND ALL media reporting as false. We have to rely on something, regardless of it's perfection or lack of, since we cannot go and research every news item that happens everywhere in the world.
For me, I would trust my scanner before my local news show. And my SW rig hears more objective views on US and world events than one would get from national TV. But the immediacy of satellite comm's and international commlinks seems to level the playing field.

I wasn't talking about anything but a table mounted FRS radio, with the same guts and the same antenna. Just AC power. I am pretty sure my unit does not have a DC jack, otherwise it would do me just fine. Many mothers at home use them to talk to their kids. Why not a base?

Its not really low power. What you would have using two bases, is an intercom, better than any other intercom you could think of.

Source record: 110165

Hi all,
I'm about to pick up a used pro-2004 (hopefully tomorrow).
And I was wondering what can be added to extend it's capabilities?
I think the radio is already mod'ed for cell and there's a sca
board installed. I found a few other mods on the net, like the
400 channel, squelch, and speed. I was wondering if there is
any computer interface that can be added? OS456Lite ?
On Optoelectronics' web site there is no mention of the 2004
just the 2005 and 2006.

Please point me to the direction of other mods and computer interfaces.

Thanks,
Chi

Source record: 110166

Well, there is a computer interface for it, the CE232 by Bill Cheek. I don`t believe any of the Optoelectronics products will fit it. You can also speed up the scan speeds on them, but this will cause probelms if you are using the interface with it. Diode mods are OK though. There is a program called Pro - Turbo that you can use with the CE 232 interface. There are so many mods that you can do to that radio that I cannot list them all here..... discriminator taps, etc, etc, etc. including adding an S-meter, and on and on.

This is a very good radio for all - around scanning, it will cover a lot of ground.

www.comtronics.net

The Pro - Turbo web site:
www.iaw.on.ca/~jabba/pro-turbo.htm

And of course, our own excellent source of information right here in the
USA:

www.strongsignals.net/

I think you will find these sites fascinating, as they contain quite a bit
of information about your radio.

Like the title says. Local (Boston, MA) buyer preferred, non-local add shipping costs. I'd even cut the price down a bit to get a local buyer, if necessary. It's in fine condition, a few scratches, but nothing too bad. It has been used very little.

My email will probably be dead during this weekend for a network upgrade here, so if you wish to contact me about this just call 781 647 5286, no calls from 1-11AM please!

thanks,
Andrew

I took my scanner to the 49ers-Chargers game yesterday and was lucky enough to find the frequency the 49ers used for radioing in plays to the quarterback. They were using 464.8875 Mhz and it was scrambled -- not digital but some kind of analog scrambling. Through the binoculars it looked like the guy doing the talking had a normal UHF walkie-talkie with an extra box on his belt that the audio was going through.

I also tried and failed to find the frequency used by the referee to announce penalties over the PA system. Anyone know where I can find what frequency they use?

I'd suspect the coax or antenna too. Try substituting another antenna of some type.
Sounds like a short or open coax, depending upon what exactly you mean by "chopping out." Do you mean cutting out (off & on) or varying signal strength.

I know it's hard to describe in written words what you are hearing, but it helps to be very descriptive.

I don't know all the 900 mhz cordless phone frequencies, but I did monitor a very interesting conversation the other day on or around 926.600 mhz. It sounded like a cordless phone to me. I believe it was a base channel. I hope this helps.

Source record: 110178

Does anyone know of any modifications that can be done on a PRO 2046 ?
I hope someone can help me because the word on the street is that this is one tough little son of a bitch to monkey with. Also getting some air-band interference on and around 155.340,155.205 and 155.220.(hospital and ambulance frequencies here). This happens 40 miles from the nearest airport.

Two things will get you what you desire:

1. $12.95
2. Your car pointed at the nearest Radio Shack.

Until then, try this:

www.altavista.com

Type in "Maine Scanner Frequencies" and press enter.

See what others who came before you have to offer.

It's free, so don't expect the motherlode. But then again you might get lucky...

Last but not least, your scanner should have a button on it labeled "SRC" or "SRCH" or "SVC"... finds the ones no one has listed. Just do it in 2 to 4 MHz chunks. What I find truly amazing is how pristine the search button looks on most folks' scanners. The rest of the lettering has worn off the keypad, but not that search button.... It's the least used but the absolute best feature your scanner ever had. If it doesn't have one, get one that does. Trust me. Walk into your local WalMart and search 151 to 155 Mhz. Loads of fun - and they're itinerant - that means "not listed in most frequency guides" in layman's terms. I set the scanners on display in the automotive department to their freq's once - that was a riot.

Hope that helps. Most folks in here really prefer not to answer with freq's. If you wanted Phoenix, I could send you a file direct from my 245... But Maine is a bit out of range.

Good luck and good hunting!

Glenn wrote in message ...
>Sure Ward, throw the big bucks at it.....

Well now wait a minute gang. Let's think about it....

A new Motorola Astro Saber is what? About $3000? OK. So a comparable radio should be worth at least that much retail.

But you aren't selling it retail and new. It's used. That lowers the price. $1500 gets a used saber these days...

The Astro saber transmits. But as I see it, yours only receives.. Interesting. But not worth as much now. That would make it nothing more than a rather fancy scanner: $750 gets just about any scanner worth having NEW.

It receives cell calls. AND tracks them. Neato-Burrito, but I wouldn't use that - it's illegal. So I could get fined and have this SCANNER confiscated if I got caught with it. That means more risk to me, and thereby lowers the price - considerably. $250. And don't give me that But it TRACKS them speech... So can an old pre ban 2006 with interface and freeware software. So what.

Coming back to your "I'm not supposed to have this" bit. How was it acquired? I'm guessing it's HOT. Means someone will come looking for it. Someone with a badge. Knowingly receiving stolen property is a crime in any state, and receiving across state lines make it federal. More risk, and for what? A scanner I never heard of? Yup, another price drop.

$50 is probably the MOST you'd get out of such a thing if it's stolen. And that's probably pretty generous...

Considering that you posted this in the most public way possible, I'd say you won't be the sharpest tool in the shed when you ship this thing to someone. You have no idea how easy you would be to find, should anyone with the knowledge be so inclined. The FBI hires people who do it full time. Once you are found, then the buyer is located afterwards. Unless you like jail...

Now you want mailing addresses to send a manual? Sounds like a good way to have the locations of some high tech toys to peruse when the owner is away... Sorry, but you haven't exactly provn yourself trustworthy, now have you? Do this: Put up the manual on a GeoCities page, and give out the URL. Put your potential customers at ease.

You really gotta unload it huh? I have an idea. Put it back where you got it from and then no one knows the difference. Maybe no one saw you do it, and maybe it hasn't been noticed missing yet. Sure you don't get thousands of $$$ for it, but maybe - heres something - maybe there's a reward for it's

safe return. Think about it! "Look what I found in the dumpster" could equal a few extra $$$ plus a good samaritan ad in the local paper. Ya never know....

My thoughts opinions, etc. Take 'em or leave 'em...

You need a "power inverter"...12 volt DC to 110 volt AC.
Walmart has a 50 watt for about $30 as I recall, in the automotive area.
You plug it into your cigarette lighter, then plug your scanner (or whatever electrical device you want to run)into the inverter.

Lookin for frequencies for the towns along I-71 in the State Of Ohio.
You can skip the Cleveland area, I already know them. I would like any
other towns starting from the Medina County line to Cincinatti.
Thank you very much

Yes, scan speed is very slow. But it is only one of the parameters to
consider with this type of radio.

It takes standard 10.7 IF xtals. The local R.S. just might have a
selection of crystals for the local services that they'd let go cheap,
if the manager can remember where he stuck the parts tray they were in.
Otherwise it's $5 apiece, special order.
While the DigiScan 8 was only a simple xtal scanner, it was solidly
built and had the simplest user interface around (those two toggles felt
as good as some milspec gear). It came standard as VHF-hi, but you could
buy a bolt-in UHF module.

> ... does anyone know if Unimetrics is even around in any way, shape or
> form these days?

Lafayette Radio was the primary retailer and might have had an interest
in them or owned the name. Last I heard, the remnants of Layfayette ended
up in Circuit City. Anyone got the story on the ultimate fate of Lafayette ?

I just bought this scanner from Radio Shack.
I was wondering how I can manually enter a channel in. I hit MAN, then type in the freq. then hit MAN again like the manual said, and all I get is an error???

Also what is trunking?
How do I pick up cellular also?

Thanks
BB

The LASER guns use a "timed" pulse much the same as a conventional radar does to determine distance. Several measurements are taken over time (about 1/10 th of a second) and the computed difference in time is displayed as speed. They also use the same function to determine distance to a stationary object. They use this instead of the "walker" at accident sceens sometimes. The patrolman simply stands and takes a reading of the object and the distance is displayed.

The only drawback is the Laser gun has a limited distance, depending on the manufacturer and model and reflective surface of the target, from 200 ft to 2000 ft. .....enjoy.....

I'm looking for frequencies used by the Oakland International Airport tower in northern California. And frequencies used by flight controllers (forgive me, the correct term escapes me) that guide the plane while not under control of the tower. Also any frequencies used by personnel would be nice, such as ground crew for refueling and such. Thanks.
BTW, the reason I cant find them myself is that I am often in the Oakland area but when I am It would be nice to listen in.

> Sorry to
>confuse you. :o)

It's easy to do!
Like I said, I do not have any experience with the 245, and the 895 I only know through using my neighbor's unit. I like the 895, and there is some nice computer-control software out there for it, If I recall. As far as image rejection and interference-fighting, the 895 is one of the better models I've listened to. As a matter of fact, a little story about my scanning experience will illustrate how impressed I am with it's clean reception.
Not TWO MILES from where I live is a BIG pager/cellular repeater tower. This damn thing wreaked havoc on every scanner I've used at my shack, until I bought a BC9000, which handled it MUCH better... but it still was annoying enough... THEN I broke down and bought two of the PAR intermod filters (the 152 and 158 MHz models) and now things stay pretty clean and quiet. This also speaks volumes about how good those little PAR filters are. At any rate, one house away from me my neighbor uses her 895 stock, no filtration, and an outdoor discone, and gets almost NO intermod unless it's the middle of the day, say on Wednesday, a busy time around here.Even then, it's not nearly as intrusive as it was on my first few scanners.
I was very impressed indeed.
But I have not used it in a computer set up, so can't really give you any ideas on that aspect... Can anyone else here give Brian some idea about the performance of the BC895XLT as regards computer control and software, etc.?
Mike

Dave,

I have sent several e-mails to you with no reply so I will try the newsgroup posting.

Regarding the swap we were doing, your scanner for my video card. UPS has indicated the video card was delivered to you on July 29, 1999 at 9:07am. As of this date I have not received the scanner nor have I received a UPS tracking number. Please e-mail me directly so we may correct this problem as soon as possible.

You heard all kinds of stuff in the first hours after the shooting.
First he was a teenager. Then there were two teenaged shooters. Then
there was one shooter again but he was a hispanic or an asian. Then
the shooter was wearing green. Then the shooter was wearing black and
gray. Then the shooter was holed up in a motel. Then the shooter might
have hopped onto the Metrolink train at the station across the street.

"Fog of war" might be the best term to describe the phenomenon...

I have been told the following:
Cancun Tower 118.6
Cancun App 120.4
Cancun ATIS 127.7

I beleive there is a small airport at Playa Del Carmen and I would like to
know the frequencies there, also surrounding areas and airways

thanks and best regards.

By the way I go to Playa Del C on 14th September

I suppose that by "conventional radar" he meant a navigational, SSR
(the range and bearing at least) or fire-guidance (or what it may be
called in english!) radar, which makes his statement completely true.

As You say, though, all police radar units I know of, use the doppler
shift for calculating speed.

Robert,

These were great even though I was not the one asking for them THANKS for providing. Especially the
http://www.airnav.com/airport
link. With that one you can get info (and lots of it) on just about every airport. I saw it once a while back but haven't been able to find it until now with your help.

The two gentlemen who replied previously are definitely right that there is a hell of a lot else to listen to besides cordless phones, but if your heart is set on hearing your neighbors talking on the phone, (usually boring, always illegal) you should do a "limit search." I don't know if the pro 2021 has a limit search function, but if it does, you should search between these frequencies:

43.720 - 49.970 mhz for the older cordlesses
and
902 - 928 mhz (approx.) for the newer 900mhz (duh) phones

You certainly could just program in every one of the frequencies used for cordless phones, but it would be very tedious and pretty pointless. I'd go with the limit search.
You will often hear the same conversation on two freqencies, but one frequency will have only one side (one voice) of the call. This is the handset frequency- and it's not the one you want. The handset freq is always higher than the base frequency. So basically, look for the lower frequency because the base is the one you want (it has both sides of the conversation).
Did I mention that listening to private phone conversations is illegal? I'm not trying to preach; I'm just letting you know. I don't have a problem with it personally.
Finally, regarding the "other stuff" you can hear with your scanner, go out to Radio Shack and pick up a copy of Police Call if it covers your region. It's a frequency guide book covering all kinds of police, local government, fire, emergency medical, etc. freqs. If your region doesn't have an edition of police call devoted to it, there are other frequency guides out there and any one of them is a good starting point.

Good luck,
Parallax

If it is a basic model taking after the BC350A, that manual is available on the
Uniden site in .pdf format. It might help you out a bit.
Here is the url to Uniden
This one is the one directly to the BC350A manual page.

:Yes, you can run this radio off your car battery. Just be sure that you are
:connecting the correct center pole to the radio. What I'm saying is make
:sure to look at the radio to see if the center is pos. or neg. As long as
:you have that correct, then you won't blow up your radio. You can go to
:Radio Shack and get the DC power cord that you need. Good Luck.

It would never work. The plug and socket would wear out from being reversed
at 60 times a second. AC is like that.

You may find that the AC input is converted directly to DC inside the radio
so that you may get away with feeding in 12 volts DC of either polarity.
Check the circuit first though.

What piece of electronics that uses an ADAPTER at 10v@300ma and is
still AC powered have you ever seen!?!?!?!?!
The adapter converts the power to DC and the original follow up post
is correct. JUST be sure to check the polarity of the connector.
Check with bearcat they may have an adapter if your not real confident
with building. Usually only a few bucks and just about fool proof

Recently I bought Pozilla Software's Win Scan for my BC 245XLT. For the most part, I'm pretty happy with it. Unfotunatelly, it seems that it's a bit buggy. The main problem is that I can't get it to program in Trunked Moto 800 frequencies, at least not ones that I entered manually into the list on the screen. I've followed all of the proper procedures, and marked the freqs appropriatelly -- when it goes to program, it puts in a value of 0 for each frequency? Has anyone else been able to replicate this?

My other problem is that Technical support doesn't seem very forthcoming. Pozilla's website looks like it hasn't been updated since it was put up, so the links for Tech support are dead. I would like to know if there are any patches coming, and if so, where they are posted. This program seems to run sluggisly, even on a 350 MHZ PII and a 450 MHZ AMD K6. I would like to see if this can be remedied in the future with any patches.

Check out the Trunkcom mailing list. I see a guy from WinScan posting
all the time on there, usually pretty quickly too. So far the users of
it are happy. I'm still playing with it so we'll see.

Not to discount your report, because what you say happened to you is
undoubtedly real, but I had no trouble with trunked programming (Moto or
EDACS) with the trial version.

1189. MAKE YOUR OWN MOBIL ANTENNA

Newsgroup: rec.radio.scanner
Date: 1999-08-14 00:00:00 UTC
From: Zombie Wolf <zmbwf@somtel.com>
Message-ID: <7p4dd0$519$1@ruby.mint.net>

A HOMEBREW MOBIL SCANNER ANTENNA

(Or how I beat Radio Shack out of 20 or 30 dollars)

By N1CSS

Here is a way to make a good home-brew mobile scanner antenna, using an old bottom - loaded CB antenna. The antenna will only be good for one band of interest, since multibanding these gets techinical in a hurry.

The first thing to do is to peruse through your own junk pile and see if you have one of these old CB antennas. You know the type I am referring to , the kind with the big coil at the bottom, and a short whip sticking out of the top. There are a lot of these around, and you can get them dirt cheap, especially if they aren`t working any more. (like when someone tries to use a 500 watt linear on them and burns the coil part out). A burnt out antenna like this is not worth fixing for CB, but makes an ideal scanner antenna, if the whip on it is at least 18 inches long. It just so happens that an 18 - inch whip is 1/4 wavelength in the middle of the most common Police/Fire/Emergency bands, which are right around 155 MHZ. Check your local yard sales.

The idea here is, we are going to bypass the coil in the bottom, and just use the top part (the whip) for the antenna. Look the antenna over, and try to figure out how the coil housing comes apart. Some just unscrew, and then you can finish taking them apart, while others come apart a different way. I will leave this to you, but the idea is to get to the actual coil under the plastic housing, because we have to eliminate it.

Once we have gained access to the coil, we want to look at it, and determine just where it connects to the whip, and where it connects to the center conductor of the coax. We are going to remove the coil, and solder a jumper between these two points. Clip the coil ends with a pair of diagonal cutters, and just unwind it off the form. Now, solder your jumper between the two points. Some #12 or #14 copper wire works well for this. Run this jumper to the center conductor of the coax, if the connection point doesn`t already go there. Take note of how long the jumper is between the two points, as we must subtract this from the 18-inch whip length.

Now, we want to take a look at the ground side of this antenna, usually at the base, to see how the shield braid of the coax hooks up to it.
If your antenna is a Magnet-mount type, you will want to get a connection to the metal housing that holds the magnet, not the body of the vehicle. there is usually some provision for this, a screw or a crimp - type fitting that crimps over the bare shield wire of the coax. Make sure that you have a

good connection to the shield, If your ground is already hooked up, then you can skip this step.

You folks with gutter and trunk - mount type of antennas have to do the same thing, but you are looking to keep (or establish) a connection between the coax braid and the chassis of the vehicle.

In a lot of cases, the ground is still hooked up to the original point, so you can just leave it there.

Naturally , even a cheap ohmmeter comes in handy for all of this stuff, since you can make continuity checks.

Now, cut the whip to 18 inches, minus the length of the jumper you put in the coil housing. Your antenna is now ready to use, except that you will probably want to go down to the local Radio Shack and get an adapter to convert the CB plug on the radio end of the coax to one that fits your scanner.

You can now install the antenna, you mag - mounters just set it on the roof, and others will install in the usual manner for their particular type of antenna, be it gutter or trunk mount type. One tip: non mag - mount types want to have a connection to the metal body of the vehicle at the mounting point. You might have to scrape a little paint to get a good connection, but it sure beats listening to the electric fuel pump on every channel ! By the same token, it is good to mount the scanner so that the chassis has a good ground connection, and this will help with the noise problem. I once knew a guy that couldn`t afford two scanners, so what he did was, he took a needle and worked it under the plastic jacket of the coax at a pretty good angle, so it didn`t short the coax out,but it had good contact with the shield, and then he taped the part left sticking out down on the outer jacket of the coax, leaving about 3/8 of an inch of the end exposed. In the car, he had a short wire attached to the car`s metal body at one end, and on the other he had an alligator clip attached. he could get a ground by just putting his hand-held in the car, and attaching the alligator clip to the end of the pin ! Pretty slick, huh ? In the house, he had a wire attached to the center screw that held the face plate on the wall socket, and the other end was attached to his shield braid on the house coax. One scanner did double duty admirably.

Try this out. What have you got to lose ? An old antenna like this can be had for 2 bucks at a yard sale, and probably for nothing, if you have a pretty good junk box. you could spend the 30 bucks you save on taking the wife out to dinner, and make all KINDS of brownie points !

Check Rich Wells site.

http://www.strongsignals.net/bc245xlt/index.html

or

pozillasft@aol.com

That's the technical e-mail address

They have been very quick to help or answer questions for me and there is an upgrade.
All the info is at Rich Wells site.

Yes, you just need a converter that will plug into your cigarette lighter, convert the power and allow you to plug your scanner into the other end. I believe you can pick these up for about $50 new.

1196. Notification Networks Extended

Newsgroup: rec.radio.scanner
Date: 1999-08-14 00:00:00 UTC
From: David Pinero <dpinero@pobox.com>
Message-ID: <7p4qo2$a8g$1@nnrp1.deja.com>
Source record: 110117

I am very familiar with existing "notification networks" run by civilians and even public safety operations. However, I think it would be neat if someone extended such projects by building a "radio backbone" of spotters who contribute to such networks. Spotters would be people who find themselves at the scene of some kind of "news" or public safety response...no matter how seemingly mundane. If you have the resources (and I am working on it), here's what I have in mind:

Build a non-profit organization of communication enthusiasts, secure a set of frequencies for use by said organization, and allow members to join the group and carry radios they purchase to immediately contact a group-run dispatch center. The dispatch center, which could be anyone's home or a club meeting office, accepts calls over the frequencies and distributes the information via network pagers and internet networks. Think of this...

First, it is a "useful" element to the communications hobby. I can't think of single communication enthusiast who would not love a valid reason to carry around a two-way all day. Second, if police and fire agencies eventually move to digital radio networks, there will be a bonafide need to replace ground-level incident reporting *somehow* - and to replace the enjoyment of scanning. This could be that way. While police and fire operations are unmonitorable, civilians nonetheless could "tune in" to such a civilian-based networks any time they want for the same benefit. Membership fees could be used to support the dispatch center and radio equipment.

The questions to be answered would be, is it legal? What kind of radios would be used, and what frequencies would such a group apply to use? You wouldn't want to do this kind of thing on CB. Could the cost of running such an organization be kept low enough to attract the density of communication enthusiasts needed to make the network useful?

I think it would be a lot of fun and very useful. If anyone would like to brainstorm on this, send me an e-mail and perhaps some of us as a group can come up with the basic protocol for such an organization during a scheduled chat on IRC or someplace. Also, I am being presumptious in figuring no one HAS come up with this idea, so if anyone is doing this...let us know. I for one would love to hear about how such an operation works!

The author has been seen over at strongsignals.net's BC-245XLT message
board. You might wish to contact him through there.

I've also tried this program, and it's very sluggish even on my P3-450
system. I'm guessing the code hasn't been very optimized for use with the
245xlt yet.

Any idea why I am hearing Montgomery County, PA EMS ambulance
dispatch calls on 462.6875?
I didn't think these FRS/GMRS frequencies were shared with emergency
services. I don't know a lot about GMRS but I didn't think it included
such services. I suppose if they are using a repeater, I won't interfere

xmitting FRS on Channel six as this would be the output frequency for the repeater (unless I was really close to them), but if they are simplex I sure might. What gives?

There already is such a group of people in Central NJ. They listen to the scanner and when a serious fire or MVA is dispatched, they go to the scene and report back to each other, on a frequency 461.575. They also use alpha paging. I don't know who you can contact for info.

The BC895 is actually very sensitive so I doubt if that is the problem unless yours is defective. RG/6 of good quality like Belden (not Radio Shack) is fine for scanner installations. 50 Ohm cable is abolutely not required although RG/8 works fine if you want to wrestle with cable as thick as a garden hose. It would be interesting to know what frequency you are trying to receive, what the model number of the antenna is, and what connectors you are using at both ends of the cable.

Don,
You may want to try a directional antenna, which provides more
gain than a 1/4 wave dipole.
You can make a Yagi antenna based upon theory obtainable
from the Amateur's Radio Handbook.
I'm not sure if an omnidirectional antenna like you have can copy a
good signal at 15 miles, but the other suggestions from this newsgroup
suggesting that you to check your transmission cable are valid.
Apparently, people think that if the communications network goes
through a repeater, the signal strength should be strong enough
for you to copy 15 miles away. Could be true. Good luck,
Al

Main concern for you to consider when installing an outdoor antenna/
stretching cables/coaxes is to study loss and other caracteristics of your cables.
Following is a snip from Radioware & Radio Bookstore homepage:
http://www.radio-ware.com/products/techinfo/coaxapps.htm

Scanners (VHF/UHF)
For Scanner (receive-only) applications, we recommend using our low-loss RG-6U as a minimum. For even better signal reception, use either RF-9913 or RF-9914F loss loss cables. You can even use RG-11, but the RG-6 and RF-9914F/RF9913 cables are better choices for most scanner applications. Don't use RG-8U, RG-58, RG-59, RG-213, or even inexpensive 75 ohm "Shack" TV cable as they will perform poorly. As you can see from the table below, at the higher frequencies cable losses can be significant so use quality low-loss cables and keep the cable length to the antenna as short as possible.
http://www.radio-ware.com/products/techinfo/coaxloss.htm

As you can see ,a poorly specified cable can loose 20dB or more of signal
at a given frequency in the 800/1000MHz range ....

Why trash this guy. He has a decent site with lots of good info and yes a link (links) to Rich's site. Also many other helpful sites. Even a cartoon. As for us being "suckered " into his site to get more hits, I guess I don't understand that. I don't see any ads on his pages (I may be wrong, but I didn't see any), so how will he benefit from more hits? Even if he does benefit, SO WHAT? ! looks to me like he does quite a bit of work on that site. More than most. I would like to compare it to the sites of those who are trashing him. Please post your URLs.

Actually, I seem to recall there are some restaurants, theatres, etc, being mentioned as having such devices installed to 'enforce' their bans on the noisy irritants. Not in the USA, though, where it'd be illegal.

Actually Radio Shack has some very fine double shielded RG/6. All in all unless you know something I don't (wouldn't be hard) Radio Shack coax is not that bad. In years past they had some crud but from what I have seen and even used some of it isn't bad at all. OTOH, recently I have only used RG/6 from them.

Imagine that and not even a flame. Darn! Common misconception about 50
versus 75 ohn coax for reception. RG/6 be cool. :-)

I saw it once with some clear RTV on some RG/8. The braid and center
conductor looked corroded like heck for about 3 feet from the connector/seal
after about 2 years.

Broadcast and your telegraphy are two completely separate licenses. You needed the telegraphy ticket to operate on a ship but the chief engineer for WABC in NYC never needed one for his broadcasting.

Don't know about CD-ROM, but I'm sure Bob Kelty has it on floppy and probably printed version. His phone numbers are (408) 269-5811 and 269-5814...I forget which is fax and which is voice.

Randall Buxton wrote in message <2kJt3.4657$pq3.72940@news1.rdc1.sdca.home.com>...
Taking a trip to San Luis Obispo and Monterey Counties later this week. Need info on fire/law/EMS unit numbering and frequency info. Anyone with the info I would appreciate it. (I wish I could obtain a version more recent than 1990 of Kelty's Government Radio Systems book. Is it on CD-ROM???)

Thanks.

Randall Buxton

Why post a message with good information JUST here when it's going to be gone in a few days? Why not put it up on a page that has a decent hit count where one user can read it, tell his friends about it, they read it and tell some other friends and.... Get the idea? It'll stay there for a while so MANY more users can see it.

Stef
Try a search on ebay, I saw one listed there the other day. Didn't check it as they are really pretty medocre (thats probably spelled wrong - try ho-hum) scanners. The only advantage they had was the alpha display, and several other scanners have that now.

> guys think about it? If you have one, what is
> your expierence with it?

It picks up the low power repeater function of the police handheld
radios.
When it finds one, it beeps the alarm and lights up. It also alerts
when the
air patrol freqs are in use.

However, you can't rely on it any more than a radar detector. It
isn't
100%. Your radar detector won't keep you from getting a ticket from
an
instant on hand held radar gun. The scanner won't pick up the
repeater
freq from the hand held radio if he has the radio off when he's not
using
it (like he's supposed to have it). A lot of patrol officers leave
their
radio on, but not all of them.

I have a BCT -7, and I like it, but it is limited, and even more so
now that
so many cities are switching to the 800 freqs that aren't
pre-programmed into
my unit. :-(

Still, it's reminded my several times on the open road that you
usually can't
see the air patrol <g>

>Thanks in advance, Randy
>

If you install a blocked OS535 in a unblocked (European) Pro-2042 you
will not have the capabilities to receive cellular frequencies while
under computer control. When the scanner is back out of computer
control and is using channels/frequencies that are stored in the
scanner itself...you would be able to scan/search those cellular freqs
once again. If you have an unblocked OS535 you can scan the cellular
ranges under computer control and without computer control.

Hello,

Has anyone tried the new AOR 16B scanner yet?? How do you find the performance re sensitivity and intermod rejection? The last AOR I used was the old AOR 100, which was about as sensitive as a rock, and had the intermod rejection of a wide-band preamp!!

Any comments/comparisons with the Alinco DJ-X10, or comparable-cost hand-helds would be appreciated.

Mike

Another alternative, someone may have taken an FRS unit, patched a
scanner into it and attached one of those Radio Shack "repeater" devices
to it, placed it in a high location and are repeating it back over FRS.

1262. Advice on Reception

Newsgroup: rec.radio.scanner
Date: 1999-08-15 00:00:00 UTC
From: "Don R. Deaton" <aa484819@mail.idt.net>
Message-ID: <37B6A7EA.5A96FED5@mail.idt.net>
Source record: 110004

I have just upgraded to a Uniden BC895XLT in order to pick up the police freq. in a community about 15 miles distant where my son is on the force. I am using a Rat
Shack antenna, approximately 20 feet above the ground (chimney mount) and can barely receive the signals....lots of static. I am using about 58 feet of RG-59/U coax. Dallas and local PD signals are strong and clear.

My son is using the department issue handheld with the little rubber duck antenna and can receive perfectly at this location as well as in downtown Dallas, about 15 miles further away from his station...probably a repeater downtown.

Does my scanner, the BC895XLT, have a reputation for poor reception or do I most likely have a poor antenna/cable system?

Any suggestions will be sincerely appreciated.

Don

My friend, I tried to locate such frequencies for you but was unable to do so. However, let me just mention one thing to your from personal experience...I went on a cruise a few years back (1995). I was careful to remember my scanner, extra battery pack, wallwart and frequency listings. It wasn't worth the time or the effort of taxing my brain to remember all this stuff. Most intership communications were kin the native language of the ships personnel (in my case it was of Panamanian registry and I guess most of the comms were in Spanish or Panamanian (?) I spent more time worrying about my radio stuff getting stolen than I did actually using it. With todays modern ship-to-shore (satellite comms included) technology, there's very little to hear. From the files of been there...done that, scanning is not and won't ever be on my itinerary while cruising on a beautiful new ship in the crystal blue waters under Gods blue sky anywhere on this great planet with the added addition of gorgeous women, tropical drinks and relaxing. Just a little food for thought.

I think you're correct Andy. Tom made a real good guess but apparently
it's not an image. I hear it on half a dozen different radios. FRS,
several scanners etc.

Since the only direction the previous replier lead you in was circles (so what else is new ??) let me point you to a couple of web sites that might actually get you going with some of the information you asked for.

http://home.earthlink.net/~wyoron/mr8100.html

http://www.wyattphoto.com/mr8100.htm

These seem to be all about the MR-8100. Hope they help !

I also believe it's your coax. I'm not perfectly sure but RG-59 isn't
50 ohm coax. I've always been a firm beleiver in RG-8 or RG-8X (x is a
mini RG-8, a little thicker then rg-58 and ALOT less lossy)
As far as sealing the antenna connector I use an RTV silicon sealer.
Much cheaper to buy because you can use it for ALOT of things and it
holds up forever.

I have the following Radio, and electronic equipment for sale. Will consider trades for other Electronic or computer related EQ. All working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

Non Tube Items:

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $250

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. Asis$50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both or trade for portable 800 scanner that can receive Cell.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

1275. Re: A "White Box" device intended to jam cellular frequencies ???

Newsgroup: rec.radio.scanner

Source record: 110017

In case you don't want to go to the site and to avoid a certain "Flamer" from calling me names again, oohhhh thats hurts,... I include the text from what I wrote and put on my site below:

A "White Box" device intended to jam cellular frequencies ???

In an article in the September 1999 issue of Popular Communications magazine Alan Dixon, the author, talks about a "New" product possibly making it's way from Israel to the States. This
device he labels a "white box" device is intended to jam cellular frequencies and is said to be in production. Alan goes on to say that the "white box" could become a favorite of pranksters. The article is located on page 75 of the magazine.

If you get a chance to pick up a copy of the Sept 99 Popular Communications I think you'll enjoy
reading this and all the other articles in the magazine.

>still AC powered have you ever seen!?!?!?!?!
>The adapter converts the power to DC and the original follow up post
>is correct. JUST be sure to check the polarity of the connector.

An AC input almost certainly uses a bridge rectifier so input polarity DOESN'T MATTER. At worse it uses a single diode (unlikely) and polarity matters but reverse polarity won't hurt anything. It's possible the circuit uses two diodes to develop a plus and minus supply. It's unlikely though. In this case, DC power in won't work.

>Check with bearcat they may have an adapter if your not real confident
>with building. Usually only a few bucks and just about fool proof
>>
>>It would never work. The plug and socket would wear out from being reversed
>>at 60 times a second. AC is like that.
>And how would it wear out the plug and socket Einstien?????

It was a joke. At least he knows the difference between AC and DC.

>>You may find that the AC input is converted directly to DC inside the radio
>>so that you may get away with feeding in 12 volts DC of either polarity.
>>Check the circuit first though.

1285. RS Pro-26 replacement CPU

Newsgroup: rec.radio.scanner
Date: 1999-08-15 00:00:00 UTC
From: Jorge Morales <Sycho_Graphics@msn.com>
Message-ID: <#YJhGkz5#GA.281@cpmsnbbsa03>
Source record: 110027

I would like to know if any companies in the US or Canada have the following item. I know Javation in UK has because the emailed me back but I was hoping somebody closer may have.

Here is a description of what I need as described by an email I received from JAVATION in UK:

To restore full coverage to the PRO-26 (Model 20-0506) so you have "normal" keypad entry of all frequencies 25-1300MHz) you need to replace the IC fitted to your model with the IC fitted to the European model. This allows full coverage - all other features are identical although some default step sizes differ but as you can select any step size on any frequency this doesn't really matter.

The logic board has a metal RF shield over most of it retained by Several screws. Remove the screws and you can gently lift the shield up. It will not come away as it is soldered at the top two corners. The CPU is in the center of this board and labeled Uniden UC1702.

This is the CPU you need to remove and replace. Replacing with the UC1771 CPU will give full 25-1300MHz coverage.

Alternatively you can replace the complete logic boards which is considerable easier to do. These have all the components including the CPU already fitted. Just a small number of screws need to be removed to replace the logic board.

Two variants of the logic board exist - some very early with the female socket at the lower right hand corner whilst later and most models have the pins on the logic board and the socket on the RF Board - this needs to be confirmed prior to any orders being dispatched.

Thankfully you have a serious reply to your request, that gives you
the web pages. The other reply you got, well, consider the source.

Insofar at the MR8100, it did have a problem with intermod, but other
than that, it was a pretty good scanner. I really do enjoy the LARGE
alphanumeric display, and the easy RS232 programming. And the audio
is MUCH better than even most scanners sold today.

Overall, it is a pretty good scanner, as long as you are not trying to
use it in RF rich enviroments.

There is also another possiblity. The EMS transmitter is out of
alignment and is emitting harmonics. 462.6875 is the 3rd harmonic of
154.229. If by chance that is the case, then they need to get a
technician to fix that right away.

It would help to know the primary operating frequency of the EMS
transmitter.

Andy

I can't agree with your advise Tom. IMHO, as far as a scanner is concerned, it doesn't matter if you use 50 or 75 ohm coax...the impedance the receiver sees when scanning is rarely 50 or 75 ohms, it is bouncing like a rubber ball between 5 an 200 ohms! (give or take a few ohms.) One of the best "scanner/receiver" coax is the RG-6 variety which is 75 ohm coax. Great shielding and low loss up into UHF land. I have used it for years on everything from hone built helix for the Milcom satellites to a quadafilar antenna for my WX sat receiver. Has always worked very well for me.

Also, be careful using RTV silicone sealant around coax. There is a chemical in 'some' RTV sealant that leeches into your coax and causes it to prematurely fail. I read this on Usenet some time ago, a www.deja.com search might reveal the discussion.

Glenn

1292. FS: BC9000XLT

Newsgroup: rec.radio.scanner
Date: 1999-08-15 00:00:00 UTC
From: David Schoenberger <dtscho@mail.wm.edu>
Message-ID: <7p723o$j2g$1@autumn.news.rcn.net>
Source record: 110034

For Sale:
BC9000XLT 500 channel scanner

Features:
500 channels in 20 banks of 25 channels
Covers frequencies from 25-550 MHz and 760-1300 MHz (less cellular)
250 channels can have alpha tags attached to them
CTCSS tone board installed
Rotary tuning knob for cycling through channels or frequencies quickly
Selectable tuning steps (5, 12.5, 25, and 50 kHz)
Selectable tuning modes (WFM, NFM, and AM)
Selectable attenuator by channel
Selectable delay by channel
Ten priority channels
Turbo Scan scans channels at 100 channels per second
Turbo Search searches frequencies in VHF band at 300 steps per second
Data function makes scanner automatically skip over data transmissions
Contents of a channel can be sent to another channel
Auto-store automatically stores frequencies found during search in available
channels
Searching can be done in either direction (up/down)
Status button tells important functions of each channel
Count indicator tells how many times a channel has been active
Memory indicator indicates contents of each bank
Two levels of display brightness, or the backlight can be disabled
High-cut function helps to mask some background static in transmissions
Auxiliary output allows voice activated recording from the scanner
Line out and extension speaker jacks

Scanner comes with all accessories, including power adapter, antenna,
owner's manual, and box.
Scanner has no scratches or physical problems, and works fine.

If the buyer would like, I will program the scanner with local frequencies
from the buyer's area.

$275.00 shipped in the continental United States
I will ship the scanner via Priority Mail when funds have cleared.

Thank you.

Less than 3 months old and in excellent condition. Kept in leather case since coming out of box. Features:

530 kHz - 1650 MHz frequency range
1000 non-volatile memory channels
10 programmable search bands
AM, FM, WFM, USB, LSB, CW receive modes
S-meter
30 channels/second scanning
30 steps/second searching
VFO
Backlit keypad and display
User selectable receive mode and step size
User adjustable battery saver
DC jack for external power source
Monitor key
Priority channel
Multi-function rotary control
Attenuator

Asking $225, which includes UPS ground shipping (USA only). Please email me if interested.

You are probably hearing a Harmonic or image. Place two scanners side
by side and put one on 462.6875 and scan the EMS freqs with the other.
You'll probably find that your suddenly listening in stereo.

> What does that mean in English? English only please. I can't read
> anything else.

then its time to learn some german..... and some dutch also.....

when you do such an extended crossposting against all net-rules you should be sure what you are doing.
Have you subscribed to ALL this groups???
Please tell us where you are subscribed to, so we can at least prevent crossposting the answers....
I've cut down the list to the english groups.....

If you want to post to a German Newsgroup you should try to write in german. And you can identify foreign language groups on the ending or beginning of the groups name. .de is for "deutsch" and .ru is for "russia" for example..... you SHOULD know it because you use it in your fake-adress.

For frequency databases have a look at the URL of ILG at

http://www.ilgradio.de

subscribing for a password is totally free of any charge.

Andreas may not understand your english postings -wich would be enough ONE time ONLY- but he also is writing in a bad german grammer also :-((

odo -from germany

PS: do ONLY post with a REAL replyadress to the newsgroups.

There was at one time several web pages at www.cylexinc.com that
described and had pictures of the discriminator tap of the SC-150. Due
to the POCSAG decoder scare, the portion that had the Cylex decoder
has now disappeared. This was actually a reprint of an article in
either Electronics Now or Popular Electronics. Doing a quick search I
think it may have been the May 1997 issue of Electronics Now. You
might go to http://www.electronicsnow.com/ and e-mail the company to
see if they might send you a copy or reprint. Also you might contact
Cylex to see if they might have that article's pages still on their
site but just hidden.

<snip>

So do this: Form a corporation of your own.

It takes $30 million dollars or more to put up a radio station in a metro area, but they make millions back year after year in advertising. So you have a good investment opportunity there...

Put together a slick ass presentation and hold an investors meeting. Show trends of the other stations in the area, and how much money they make and how much they spent to make it. Get the rich folks in your area to invest. Then go out and get your FCC license, the $250,000 worth of radio gear, the land, the engineering staff, the DJ's, the music, etc. (or better yet, buy an existing station, saves lots of hassles there) and play what you want. If it's what other people want to hear you make money. If it's not, your shareholders sue the crap out of you and you lose your ass... tough break.

Hmmm...Not as easy as it looks is it? Don't want to do that do you? Smart choice. Now listen up, because I'm going to tell you who's REALLY to blame for this mess....

You and me.

Yup, that's right. You and me and everyone else who make up John Q Public decides what music is hot, what clothes are cool, what cars to buy and what food to eat. We decide it all with every trip to the mall, the car lot, the grocery store.

It's not the big corporations - are they holding a gun to your head and MAKING you listen to the radio? No! Think about it...

The radio and tv corporations have to cater to the whims of the public so they can tell Tommy Hilfiger and Downey Fabric Softner and Joes Pizza that their ad is being presented to the maximum number of people possible. Where would you rather advertise your product, the superbowl or lawrence welk? Think about it. Advertisers pay premiums for RATINGS not CONTENT. Only recently, in the Politically Correct 90's has any advertiser given two turds what the content of the show is. Sure Jerry Springer is trash but how many people watch him each night. MILLIONS....go figure. And it was working until PC minded pinheads said "I'm not buying your product because I saw the ad on Springer.." Yeah, well to see it you must have been WATCHING IT!!!!! Oops...

gee got a point there...

Even Jerry knows... He is only giving you what you want, or you'd change the channel.

That's why the media spent days talking about the plane that crashed with JFK jr. and family on board. If they don't, then you change the channel and poof! there goes the advertiser dollars.....

I could go on and on, but you get the point. Yeah, the subject fits to a T. We ARE the laughing stock of the world. But we have only ourselves to blame.

A quick check of my home reveals no Tommy clothes and no Britney Spears albums... How 'bout yours?

-Phil

You sound like you need a better antenna instead of a better scanner. If all you want to do is listen to "local" stuff then any simple scanner should do the job.

As for the PCR-100, Its a very good receiver/scanner. But a little bit much for just listening to local apartment stuff. Go to radio shack and pick up a new Pro-70 if you want a cheep scanner. I hear they are closing them out at $80 or less.

If your interested in a PCR-100 then check this out:

Source record: 109859
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Radar does not use sound waves. Radar is a general term. There are radars all the way down in the Ham bands, and up to 40 Ghz. These are electromagnetic waves. And the waves are measured by thier frequency, scan rate, and prf (pulse repatition frequency). The Faster the scan rate, the fater it makes a entire 360 degree revolution or a full sector search, whatever a sector might be covering. And the PRF is the ability of the radar to smaller objects (like a P3 Orion Sub Hunter being able to find a periscope in a large ocean), the higher the PRF the higher definition radar it is. And the frequency will be dictated by many things, such as the engineering and intended use. Hope this helps, I don't want to seem like I am talking down to you, just teaching you.

You are correct. Analog cellular is easy to listen to. Digital cellular (CDMA and TDMA) sound like noise on the common cellular capable receiver.

Analog cellular is on its way out, though will probably be around in some markets for few more years.

The whole cellular industry is moving towards digital -- third generation wireless has chosen CDMA as the modulation of choice -- making it nearly impossible to monitor.

Those who have the older receivers that can currently monitor analog cellular transmissions -- make the most of it. Your time is running out.

How sensitive on AM is the R-10 compared to older Icom wideband receivers like the R-1 and R-100? I never could get my R-100 to operate well on the AM and SW bands even with proper antennas. For me, it was just a radio that did much and nothing in particular very well...

Source record: 109892

Hi, newbie here.
I would appreciate answers to any and all of these questions. Feel free to e-mail or post to the group. Sorry they are not in any useful order, just occurring to me as I type. Please be aware that I did try to research many of these before asking the group and I have searched the newsgroup and read many messages trying to find answers to most of these.

1) What's a Trunked System? Dose the BC3000XLT support listening to these?
2) What is a Trunk tracker?
3) Is a 46" telescopic antenna better than a 21" telescopic antenna?
4) Is a flexible antenna better than a metal/telescopic one?
5) Any problems with mag mount antennas scratching paint?
6) Is it worth it to get a cover for your scanner? Leather or nylon?
7) How about an extra battery pack if its a proprietary nicad pack?
8) Anybody know of any -scanner- (not ham radio, thanks) clubs in the San Francisco Bay Area, East Bay?
9) Is 300 a good deal on a BC3000XLT new?
10) Anybody know of a good singular/mono ear phone available online or from a major chain of stores?

11) Off topic: anybody want to buy some -barely- used paintball gear? I'm selling this stuff off so I can afford a scanner. e-mail me and I'll tell you what I have.

1338. RF anomalies in central MA

Newsgroup: rec.radio.scanner
Date: 1999-08-16 00:00:00 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <7p80a2$p47@dfw-ixnews12.ix.netcom.com>
Source record: 109893

This has been in the back of my mind for a few months now,
and it is time to ask the questions...

My main question is "why" does the following occur:

At a specific area of Route 140 on the Shrewsbury/Boylston
town line, a lot of strange things happen with my mobile
electronics. The area can best be described as (heading north
on 140) beginning about 20 meters before the I-290 overpass
and continuing until just beyond the gate of the Mass Highway
facility on the left.

Here's what happens:

1) On the CB, I can hear and communicate with stations from
MA to CA-- this has never happened before anywhere but ALWAYS
happens in this spot.

2) Frequencies around 856-870MHz and 41-45MHz all become very
busy with a sort of "open squelch" static. Just like I turned
the squelch control all the way down. The static does not go
away no matter what I do with the squelch contol until I move
out of the area.

3) On 868.95MHz and freqs immediately adjacent, a strange kind
of "pulsating" static is heard. It sounds like "<static>...
ZIIIIPPPP...POPPPPP...<static>". It is not DTMF, CTCSS, pagers,
or any other "noise" typically received. I have not had the time
to extensively find out just which freqs this occurs on.

I am thinking an electromagnetic distrubance or hidden, very
large antenna could be causing this. I have not seen any antennae
or towers around there except for a small VHF at the Mass Highway
station (used on 47.36MHz) and some CB antennae at an RV shop a
little north on 140.

Any ideas?

1342. Need Help With Bearcat 210 Internals

Newsgroup: rec.radio.scanner
Date: 1999-08-16 00:00:00 UTC
From: kc8lwv@pop.fuse.net
Message-ID: <37B79032.4792B01F@pop.fuse.net>
Source record: 109897

I recently bought an old Bearcat 210 synthesized scanner (10 channel).
After installing an antenna off a dead 210 I received
from a friend, I noticed the scanner's squelch seems out of adjustment.

The squelch closes when the squelch dial is at about the 11o'clock
position, unfortunately though, I can't hear
anything, including the local police dispatchs and other strong local
ham repeaters, unless I open up the squelch by
turning the knob all the way over to the 3:30 position. But then I end
up with all the white noise between
transmissions...

My PRO-37 and PRO-70 scanners get the same freqs just fine so I know
it's not a proximity problem. I can hear strong
signals break thru the sqelch on my others scanners. It's not pilot
error, I have the original manual but there's no tech stuff in it,
just the operation of the 210.

Do I need to adjust the squelch internally, or an audio level trim pot?
Are there any simple pots/trimmers that I can adjust? I do have a
multimeter for measurements if that is helpful.

Thank you for any help!!

> Or you can try http://www.nf2g.com/scannist/nys_index.html

Been there. The Sullivan/Ulster/Orange section is extremely
limited; only freqs are actually for DOT. Everything else is
maps, and just one or two older freqs for EMS.

Even incorrect designations for troop cars.

>1A) What's a Trunked System?
A computer automatically switches each transmission to an available frequency, so a conversation jumps from one frequency to the next, and with a conventional scanner you have no control over which system user you hear - could be the dog catchers instead of the cops.

>1B Does the BC3000XLT support listening to these?
No.

>2) What is a Trunk tracker?
TrunkTracker scanners automatically follow conversations on trunked systems as they jump from frequency to frequency. You can lock out certain users - like the dog catchers.

>3) Is a 46" telescopic antenna better than a 21" telescopic antenna?
Sometimes, depending on the frequency range covered. Generally, lower frequencies need longer antennas.

>4) Is a flexible antenna better than a metal/telescopic one?
Better how? More convenient, yes, but a properly adjusted telescopic antenna will usually receive better.

>5) Any problems with mag mount antennas scratching paint?
Somtimes. You have to be careful, especially when removing them.

>6A) Is it worth it to get a cover for your scanner?
If you're going to carry it out of the house much, then yes.
>6B) Leather or nylon?
Your choice. Both protect the radio. Whichever you like the look and feel of best.

>7) How about an extra battery pack if its a proprietary nicad pack?
Depends. The pack on a 3000XLT only lasts about five hours, but a 245XLT runs about 10 hours on a charge. If you're going to be using it in the car most of the time get a car power cord that plugs into the cigarette lighter instead.

>8) Anybody know of any -scanner- (not ham radio, thanks) clubs in the San
>Francisco Bay Area, East Bay?
Sorry, can't help you there. I live in the "other" bay area (Tampa Bay, Florida).
"Go Bucks - Beat the 'Niners Again!"

>9) Is 300 a good deal on a BC3000XLT new?
Yes. That's the cheapest price I've seen for a new one. I recently paid $250 for a used 3000XLT.

>10) Anybody know of a good singular/mono ear phone available online or from a major chain of stores?
Sorry, I use headphones when I need to. I've never found a comfortable earphone. If you do, let me know, please.

Hope this helps you out some. Anymore questions send me an e-mail.
FYI, I have both a 3000XLT and a 245XLT Trunktracker because each will do things the other will not. There is no "do it all" radio on the market - at least not yet.

Microsoft Access is very powerful but is much too difficult
to use, IMHO. We sent folks off to 3 days of school at
work and they are still having to read the book even for
the basic stuff. FileMaker Pro is a much easier program to
master by far. You can customize it quickly to maintain
your databases. However, if you are looking only for a
frequency database, it is hard to beat the shareware version
offered at the PROgramit website. Later when you get
ambitious, you can build the interface and download your
database directly to your scanner!

According to the specs the lower limit for the IC-R10 (the scanner I have) is 0.50 MHz which is 500khz. That should include the AM Bands. Thanks for the thought though.

Tom,

Don't get too high and mighty oh one who thinks he knows all.

I have a scanner that I gave to my son, a small desktop, that has
a 12v dc tap on the back (as a spade lug, believe it or not), but
the AC adapter is just that, 12vac. It feeds a full wave bridge
that has a smaller filter cap and then goes to a regulator.

AC at low voltage does exist. Why may be another story altogether.
But then sometimes bad ideas were popular. I mean, some people
actually bought the PET, right?

Mike

Isn't the law interesting? We can build Faraday cages to disable obnoxious pocket toys, but we can't place a localized jamming system in there. In the end, the result is the same.

How long before the stinkin' lawyers figure this one out?

1368. ICOM PCR 100

Newsgroup: rec.radio.scanner
Date: 1999-08-16 00:00:00 UTC
From: abuzecky@aol.com
Message-ID: <19990816120947.14328.00000027@ng-xd1.aol.com>
Source record: 109923

Need some help from the group on this one. Is this rig worth $200 or should i buy something else? All I want from this scanner is to listen to some *local* com's in my apartment. I have owned 2 bearcats and they seem to be pretty cheap and low on features, I'm talking about the bearcats made within the last two years.
Any suggestions? Thanks all
Adam

Adam:

I've looked at various reviews on the PCR-100 and the PCR-1000. The hardware looks nice, but there are scads of negative comments about software problems, birdies, etc.

Recently, I attended a hamfest and saw a PCR-1000 (new) for $200 below the usual advertised price. Later that day, I searched the internet, and I read several reviews and comments about the PCR-1000. I then realized why the ham dealer dropped the price so much.

In my opinion, you ought to buy a Uniden BC-895lxt. You can get a new one for $200 to 220. It is an incredible receiver. You'll not be disappointed.

You can go to:

http://www.strongsignals.net/

and read about the various scanners. If you compare the PCR-1000 (I don't recall if the PCR-100 was reviewed or not) with the BC-895xlt, you'll see where your money will be better spent.

> If he had something to share
>that was all that wonderful, why didn't he share it then and there
>instead of making you go to his own site

This has to be one of the dumbest things I've read in a while. What was he going to do besides ask someone to visit his site? Post all the info on the site here in the newsgroup? That's the whole POINT of a website, the info is in one place (with references and links, yes, who DOESN'T have that?) and everyone can go to ONE place....
What a moron!

1372. 30Khz steps on 2005

Newsgroup: rec.radio.scanner
Date: 1999-08-16 00:00:00 UTC
From: "Chi K. Chan" <ckchan@interport.net>
Message-ID: <7p9fum$9os$1@autumn.news.rcn.net>
Source record: 109927

Hi all,

Just picked up a used pro-2005 with mods over the weekend, but no manuals.
Anyway, I was messing around with the limit search, in the "800" Mhz
range, I was somehow able to get it to search with 30kHz steps.
But pressing the step button cause the 30kHz to disappear, which
then cycles through 5-12.5-50kHz steps, and the 30kHz step was not to be found
again. Can anyone tell me how to get the 30kHz steps again?

Thanks,
Chi

1373. Computer controllers

Newsgroup: rec.radio.scanner
Date: 1999-08-16 00:00:00 UTC
From: "Chi K. Chan" <ckchan@interport.net>
Message-ID: <7p9ghp$pb2$1@autumn.news.rcn.net>
Source record: 109928

Hi all,
I'm looking into adding computer control to my 3 better scanners.
(pro2005, pro2035 and pro2042).

I'm planning on getting the OS535 for the 2035 and 2042, and maybe the
"program it" interface.

Are there any place that might still have the OS456 for the pro2005?
Or am I stuck with the Lite version?

Also How does the CE232 compare to the Optoelectronics boards ?
Seems to be more expensive. Is it worth the extra cost?

One more question, Is it worthwhile to get the OptoLinx too?
What can you do with it?

Thanks all,
Chi

The Alinco receiver is probably picking up an "image" of the cellular telephone transmission. This is an artifact of the way the receiver is designed. All superhetrodyne receivers (99% of the currently manufactured receivers) have these images, though more expensive receivers have them to a much lesser degree.

The federal ban on receivers is a joke, anyway. First Congress made it illegal to listen to cellular telephone conversations, as if an FBI agent was going to jump out of the closet whenever someone tuned their receiver within the 800MHz band. (Many TV receivers in circulation at the time would tune in cellular telephone transmissions.) When this obviously didn't work (as opponents said it wouldn't), Congress halted sales of all cellular-capable receivers. All this is obviously a payoff to the cellular telephone industry who wanted to lie to their customers with a straight face and claim their phones are secure. Real security would have required reengineering their phones and would have cut into their profit margins, so they spent the money on politicians and lobbies instead. The hypocritical handling of the Democratic party activists who taped Newt Gingrich's cell phone conversation (contrasted with the prosecution of Linda Tripp) shows how much of a joke it all is.

1375. SOLARCON Ant.

Hi all, a friend just gave me a solarcon 18' three section ant. I beleave it was used for a CB. It's just a long fiberglass whip. Can it be sanded to keep the fibergass out of my hands? also will it make a usefull scanner ant. I'm hoping it would be good for the 40 MHz rang. Please send any answers to.....rock56@webtv.net Thanks for your time.

Oh geesh, lets have the goverment make murder illegal, and it will
stop... Right!

It's a freaking radio transmission. It goes through the air!!

Maybe if the government outlaws stupidity, all the stupid questions
will stop.

Actually he has quite a bit of info that *I* found very helpful. Modification and alignment info, model referencing, and some humor to boot. What's wrong with that?
There are many great sites whose owners advertise in the newsgroups. I do not consider telling a group about a site that is exactly on topic, to be "spam", or any kind of egregious advertising

1389. Scanning AM Radio Stations

Newsgroup: rec.radio.scanner
Date: 1999-08-16 00:00:00 UTC
From: dakbat@hotmail.com
Message-ID: <7p7kq2$2s3$1@nnrp1.deja.com>
Source record: 109984
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hello,

I am a pilot who just purchased an hand-held scanner (ICom-R10) in order to scan mostly aircraft. However I would also like to use it to pick up AM radio stations. I just picked up a telescopic antennas from Radio Shack to replace the stock rubber duckie that came with the radio. I am able to pick up very close AM radio stations (10-15 miles) but seem unable to pick up distant AM radio stations. There is a radio station that is about 80 miles away from me that I am able to pick up on my car radio but unable to recieve on my scanner. This is confusing to me. The scanner is capable of (FM,WFM,AM,LSB,USB,CW,) and I am not sure which is the best to listen on (I assumed AM). Does anyone have any suggestions on how I might pick up AM stations better? What is my car radio doing that my handheld scanner is not? Any suggestion would be appreciatted. Thanks.

Taking a trip to San Luis Obispo and Monterey Counties later this week. Need info on fire/law/EMS unit numbering and frequency info. Anyone with the info I would appreciate it. (I wish I could obtain a version more recent than 1990 of Kelty's Government Radio Systems book. Is it on CD-ROM???)

Thanks.

I agree with what you say 100%. Radio is just one way in which corporations control us. What I am outraged about at the moment is the wholesale takeover of radio stations by large corporations. Our musical choices are being destroyed by corporations which only want to play the same songs and an extremely limited range of music and other radio formats ad nauseum all over North America. today's youth are being especially brainwashed by the corporate music industry. A young person is not just sold a Britney Spears album, they are sold the Tommy hilfiger jeans she (or more accurately, the corporate monoliths she represents) promotes on her tours. It's so obvious here in canada that it is corporate brainwashing has influenced white youth to listen to hip hop and has little to do with a true understanding of what it is like to be black in a ghetto (which these same corporations also help to create. I am not slamming hip hop or britney Spears, I am slamming the commercialism associated with this music and the lack of choice of formats in most areas in North America. The deregulation of the radio market has made alternative formats, even commercial ones, even harder to compete. It's time corporations got out of the radio business and people be allowed to choose from as many formats as the radio spectrum will allow. (Which brings me to another question-could the radio spectrum not be expanded? If so, this would kind of wreck the corporations' arguments that only a few people-those with tons of money of course-should control the radio due to the limited number of frequencies) Were you thinking of this when you said "implementing technical improvements"?

williarsch please point out anything related to scanners that you or
Your buddy Mackey have posted that actually contributed to the scanner
news groups. Maybe you two should stay in "alt.fan.john mackey" and
stroke each other. or maybe some other flaming newsgroup. or maybe some
Psychology related newsgroup so you can solicit some badly needed
help.

Do you even own a scanner ? which ones ? do you know how to use one ?

Unless you two can start contributing to the scanner news groups
instead of antagonizing everyone, you should consider studying what a
scanner is and how to use one. Then, when you have something positive
to "contribute", feel free to post it. Otherwise don't let the door hit
you in the ass on the way out.

Again so kindly writes refering to me:

>The parasite has got nothing to offer outside of a link to Rich
>Wells. >>>

Yes... Rich Wells has a GREAT site, probably the best I have ever seen. That is why I link to him. I would link to your site also Willi if you had one. So I again ask that when you get one set up please let me know so I may add yours to my link page. I'm sure you will have one that does the scanning hobby proud. Have a great day my friend :-)

You shouldn't be able to pick up any AM radio stations. Am Radio is down in the 560khz to 1600khz range (somewhere around there) but most scanners only scan as low as 25Mhz. That 1600khz is the equivalent of 1.6Mhz that's 23.4Mhz below the range of your scanner (likely).

<dakbat@hotmail.com> wrote in message news:7p7kq2$2s3$1@nnrp1.deja.com...
| Hello,
|
| I am a pilot who just purchased an hand-held scanner (ICom-R10) in
| order to scan mostly aircraft. However I would also like to use it to
| pick up AM radio stations. I just picked up a telescopic antennas from
| Radio Shack to replace the stock rubber duckie that came with the
| radio. I am able to pick up very close AM radio stations (10-15 miles)
| but seem unable to pick up distant AM radio stations. There is a radio
| station that is about 80 miles away from me that I am able to pick up
| on my car radio but unable to recieve on my scanner. This is confusing
| to me. The scanner is capable of (FM,WFM,AM,LSB,USB,CW,) and I am not
| sure which is the best to listen on (I assumed AM). Does anyone have
| any suggestions on how I might pick up AM stations better? What is my
| car radio doing that my handheld scanner is not? Any suggestion would
| be appreciatted. Thanks.

Sure, everyone has $30 million dollars at hand, and is one of the 3
companies that the FCC grants licenses to.

Form a corporation of your own? If it was that simple, EVERYONE would
do this! But then there would be no employees to kick around since
everyone would have thier own corporation.

I gave you a link to a page with all this info. Did you spend any time reading at all. 468/freq gives you the wavelength. For a dipole it would be the total length of it, for a vertical it can be all sorts of things depending on what kind. READ a little.

The question was raised about going above 1.3mhz.
I want to monitor satelites, weather would be cool. From what I have read I
needs to be able to receive between 1.5GHZ and 2.0GHZ for satelites.

Thanks for the responses so far.

1409. Re: Antenna Expert needed :

Newsgroup: rec.radio.scanner
Date: 1999-08-17 00:00:00 UTC
From: Nettech <ve7tmq@hotmail.com>
Message-ID: <37BA4FC2.CBB791CF@hotmail.com>
Source record: 109704

I am by no means an expert on antennas, but when designing antennas you should know that the necessary length of the antenna is calculated by dividing the speed of light (300,000,000) by the frequency, the result is the antenna length in meters. For example: 300,000,000 / 150,000,000 (150MHz) = 2 meters

This figure refers to the length of the radio wave, you can then divide by 2 to arrive at lengths for half wave, quarter wave, etc antenna lengths.

In the above example a full wave antenna for 150MHz would be 2 meters, 1 meter for a half wave, and half a meter for a quarter wave antenna.

The larger the portion of the wave your antenna can grab the better it will work, although you can get excellent performance from half and quarter wave antennas.

Hope this helps.

> items that are marked down 15%, 20%, 25%, and even more, and yet they
> still make a profit on those items.

I can't think of many retail stores that don't run sales with items marked down as you stated. Radio shack isn't special. Hardware, department and clothing stores do the same and quite frequently. What are you using as a standard for markup?

> Radio Shaft sells 1200mAH nickel
> metal hydride AA cells for $5 each; the ma-and-pa store down the
> street sells 1300mAH AA NiMH cells for $3 each.

.....and the ma-and-pa store doesn't sell scanners or 90% of what the Shack does. I would also bet ma-and-pa don't beat many chains on many prices...it would be next to impossible. You probably can't drag that battery back to ma-or-pa 3 weeks later and tell them you want a refund or replacement cause it has a dead cell either.

> On little things like
> the 100k resistor pack you need to finish off your project on Saturday
> morning, the markup percentages are in the hundreds.

Expected, but the cost is still within reason. Most cities would have absolutely no source of electronics or parts if it wasn't for the Shack. Yep, many of their salesman suck just as many do at Sears, JC Penny, Office Depot and hundreds of other retail businesses. OTOH, if you do your homework and know what you want Radio Shack is the best game in town.

I don't do my research on a new Ford by through a Ford salesman. I didn't use the idiot behind the counter where I bought my Icom nor Icom's own sales staff when I reseached buying Icoms. Why would you expect the Shack to be different?

I don't really disagree with your perception, I just don't think the shareholders are willing to take a hit in the pocket to get you some tech-heads in the stores and i certainly don't want to foot the bill so I you can really get the answers. You and millions others are already in the store, why should they worry. OTOH, many that come in to the Shack are so technically ignorant they will believe anything they are told. Fat and dumb and ready for the slaughter.

The PCM phones can be encrypted, but it's up to the carrier to decide
whether or not to turn it on.

I've been watching this for a while, and yeah, I did make a smart comment, but I think it's time for this...

I really think the Cell industry WANTED the phones to be 'overheard'. I think they wanted to move piece by piece to new technology. Can you say 'upgrades'???

But enough. A number of years ago a friend (yes, I have a few) called me and started to tell me something VERY confidential.

(If you've seen this before, sorry. No, change that, TOUGH!)

STOP!! I asked if he was on a cell phone. He said yes, but the company told him it was secure. Well, I chuckled and we got into a heated discussion. (Ok, an arguement) It ended up with trying to figure out a way to prove it.

So I asked for listeners, if any, to call his office number (with phone mail) and leave a message that they heard us. The bet was for a 6-pack of Sam Adams. (It had to be a serious bet!) He announced his office number.

Anyway, he said he'd better call the office and make sure his voice mail was clear (with a snigger) just in case it flooded his system,

He hung up and didn't call back. And didn't call back. And didn't call back... Finally he called. First thing out of his mouth was "MY OFFICE PHONE WAS BUSY!!!" Turned out so many people were calling he couldn't get through!

The Sam Adams tasted sweet.

I have one and for that price, I'd buy another. I paid close to $220 for mine about 6 or 7 months ago. For a scanner with DPL/PL and Alphanumeric readout, that's not too bad. The computer control must be really cool. I couldn't tell you cuz mine will not work. The unit has a cheap feel to it. The knobs feel like they might fall off when you turn them. For what I use it for though, it's great. A lot of public safety agencies share the same freqs in my area, and just use different PL/DPL tones, and I've also got a lot of paging interference on my other scanners without PL/DPL capability. I also use this unit in a vehicle with several radios in it, and, on most scanners, I get some feedback or interference when I key up a 40 watt radio several inches away from the scanner, but with this unit, none of that happens, well, at least not on the freqs with PL/DPL programmed with them. For those reasons alone, this unit is well worth it's price to me. If you don't want an Alpha display or PL or DPL tones, then this might not be the unit for you.

Source record: 109750

I am planning on getting a wide band base scanner around December of 1999. I want to go to atleast 2GHZ, and it must be a base model. Those are the only requirements. I have been to both web pages (ICOM / AOR) and read the reviews on Rich Wells page. Just looking for as much info as possible before shelling out $2000.00.

Also, I understand the ICOM has a built in power supply (120v), does the AOR? If not is the power supply included in the price?

Thanks

I think it is a shame that ANYONE would go into ANY store and procede to
purchase something that they didn't research first. Nice of you to help out
though.

> They need to hire some real tech heads and pay em for real. Dont worry
> their mark up is tremendous, so they would still profit!

So what is their markup? What do you consider tremendous? What are you using
as a standard?

> By the way, I quit them to go to work for MOTOROLA. Q.

Good for you, proof that education is worth something .

Don't get me wrong, I don't care for Radio Shack all that much either but
anyone that walks into RS or any retail sales outlet prior to researching
thier purchase is pretty foolish.

Where do you suggest I go Saturday morning to pickup that 100k resistor I
need to finish my project? Radio Shack is great, you just have to know what
you want. BTW, I have met a few very knowledgable people working at Radio
Shack. They are rare but they do exist. Maybe you were one of them?

Glenn

There's nothing on the front page of Socal911.com. Can you be more specific?

BTW, I hear RS is going to release a TT2 base. I hope it's not the same crappy piece of lightweight plastic crap as the PRO-2050. I like something with a little substance like the Uniden Bearcat base scanners.

This small (only 5" tall) antenna is sold by Radio Shack "catalog no. 17-322" to be used as a cellular antenna. But I connected a "TNC-to-BNC adapter, (not included) but available at Radio Shack "catalog no. 278-144" and connected it to my Trunktracker scanner and was I amazed. This is one fantastic antenna and on top of that its only 5" inches tall.

If your area of interest is the 800 MHz range. You will be VERY happy with this antenna. And YES it does work with your cell phone to. Performance of the antenna does very well down to and including 400 MHz and then begins to fall-off.

This is NEW in the package. Never been opened. For your bid you are getting the antenna with magnetic mount base and 10 feet of coax cable and instruction sheet.

To see a picture of this item go to the following.
http://members.aol.com/jimdpeters/5inchant.jpg

I'm asking $12 and I will pay shipping. If you have any questions I will be very happy to answer them.

Todd,

Listening to these things is illegal. Nevermind the fact that it sounds like unintelligible noise and requires special hardware connected to a discriminator tapped scanner just to hear correctly. Never mind the fact that the people who passed that law have no idea how or why one could use the weird sounds made on these channels. In fact the only place you can even download software to make any sense of it is the Eavsdropper site in England!!! It's illegal! Your Uncle Sam says so! For the love of God don't do it!

OK, you've been warned. So make sure you DON'T tune your scanner anywhere in the 929 to 935 frequency range - it's full of PAGERS!!! Make sure you don't have a program called WinFlex or Pocflex loaded on your PC. Make sure you NEVER EVER use your 4 level FSK circuit for anything other than trunker (or a paperweight). In fact if you don't have one, don't get one or you risk listening to something you shouldn't!

Save yourself while you still can.....

1445. Re: Boycott Radio Shack!!!

Newsgroup: rec.radio.scanner
Date: 1999-08-17 00:00:00 UTC
From: Glenn Highcove <highcove@hotmail.com>
Message-ID: <37b9cccb$0$2483@news.sanjose1.level3.net>
Source record: 109767

Preface: It's a Glenn convention again!

I have to agree with Glenn. Having worked a short stint in Radio Shack between college and my first "real" job, I can tell you that it is a thankless and vastly underpaid position. The employees are on their feet all day, make minimum wage (unless they get commission on special items, and they only see those commissions if they sell a certain amount), and are often college students trying to earn their way through school. In all of the part time jobs I had while in college, I have never encountered as many rude, sullen, and sometimes wildly out of control customers as I did while I was a Radio Shack employee. There is something about the Radio Shack ethos that causes customers to leave their good manners at the door.

Radio Shack's current sales push (for the past couple of years) has been cellular phones, which has caused our hobby to be slightly neglected. This is not due to any malicious intent on their part -- they just need to go where the market is, and right now, it's in wireless phones. This emphasis leaves little time for the employees to learn about other items in the store. When I was there, I was the scanner specialist, but did not know the other product lines (such as phones) nearly as well. Everyone is different, and some are more inclined to know certain products better than others. Regardless of what the employees know, I can think of no other place with such a fine and broad selection of scanning equipment. Things may be overpriced at times, but when things go on sale or are devalued, watch out, because a bargain is on the way. I once picked up a scanner there for $8. And like Glenn said, where else will you find a 100k resistor at 9:00 AM on a Sunday morning?

My take on it is this: find a Radio Shack with a good manager. I know certain RS stores I would never shop in because their service (and management) is terrible; conversely, my local Radio Shack has gotten $2000 of my money because the manager understood good customer service, fair treatment, and had a good relationship with his customers, thus encouraging my repeat business. He was in it for the money (as we all are), but knew that if I knew I could trust him to find me a good bargain, he would get my repeat business.

1446. FS: PRO-2024, PRO-30

Newsgroup: rec.radio.scanner
Date: 1999-08-17 00:00:00 UTC
From: "Steve B." <scanfreq@istlaplata.net>
Message-ID: <7pcidl$j7s$2@cyberusa.com>
Source record: 109768

I have one of each radio, in good condition, both electronically and cosmetically. Displays are nice and bright.

The 2024 has 60 channels, and covers 30-54 MHz, 118-136 MHz, 138-174 MHz, and 380-512 MHz. Date code 8A1, for what that's worth. I don't have the extendable antenna, box or manual, but the manual is available from Tandy's web site.

Asking $50.00 obo.

The 30 was RadioShack's first programmable handheld. It has 16 channels and covers the same frequencies as the 2024. I do have the original antenna, box and manual for this unit.

Asking $35.00 obo.

Shipping is not included in the price.

Thanks.

Even more political clout today comes from the FBI, which
gathers most of its information about drug money laundering
from listening on cellular calls. All part of the War on Drugs.

First of all Public Service Communications are not private; they are
public, thus the term Public Service. Second of all; do you not really
want to know what is happening with your tax dollars or do you really
trust every thing that the bloody media feeds you? Third of all; the
pure excitement of the chase over the radio.
Now maybe somebody can tell me some frequencies for Easten Europe.

Eric:

If I'm not mistaken, the ICOM IC-R8500 does not have a built-in power supply. It uses an external one. Maybe I'm mistaken, but I'm pretty sure.

20 or 25 amp power supply wanted
IDEALLY would be a Kenwood PS-430 to match my rig

BUT...

Would like ANY clean, good working factory-built power supply.
NO HOMEBREW

I have for trade an MFJ 906 antenna tuner for 6 meters
AND
A bearcat BC 147 XLT scanner

Will trade both for a clean PS. Let me know what you have and let's talk...

73,

Gary k7mhz

The R8500 runs on 12V and comes with an external power supply. Running
on 12V allows me to use one of several large batteries during power outages
to use the scanner.

By the way I love my R8500. I can't compare it to the AOR because I've never
used one. I also have an R10, PCR-1000 and several ICOM transceivers. ICOM
has not let me down yet so I have no problem recommending them. The R8500
is the only scanner that I have that goes to 2Ghz. Most of the others only
go to
1300Mhz.

So David, what are you using it for between 1.3 Ghz and 2ghz? I have had an R7000 for quite some time and rarely have ever used anything above 900 Mhz or so. What do you hear up there?

Thanks, Glenn

1459. Multiple Antennas

We own a Pro-2040 base scanner, and I have a question regarding using multiple antennas. The Pro-2040 comes with an antenna that screws into the top of the scanner into a small hole. On the back there is a BNC connector for another antenna. Can I using both antenna hook-ups at once? I'm trying to pick up signals in the 40MHz area.

Thanks,
Dennis

Glenn,

I really haven't listened to much of anything above 1 Mhz. Don't have the
antenna
for it. I just mentioned the 2Ghz range because the original post stated
that he
wanted at least 2Ghz. I do however intend on trying to do some satellite
work
when I get the time. I would like to try some of the weather satellites.

Right now I concentrating on local trunked systems and also listening to
some
HF now that I have a decent antenna. I have plans to improve the HF range
soon.

So much spectrum, so little time ...

I would have agreed with you until I got my R8500. It really depends on what
criteria you use. The PRO-2006 is probably the most widely owned (I know
people who own several). But when it comes to features, the PRO-2006 is
a pretty basic scanner. I have a PRO-2006 with an OS-456 and for high speed
computer controlled +30Mhz scanning you can't beat it.
The 8500 also has computer control built in (although slower scanning than the
2006) and when it comes to transmission modes, filters and pulling out the
weak signals, the 8500 will eat the 2006 for lunch.

Just my opinion.

>One nice feature of the 8500 is the IF shift but is only usefull in HF
>range.

I would agree with above statements. Through software control I can only
get about
20 channels per sec. while in stand alone mode it will do about 40 cps.
which is
still respectable.

>Also the Ar5000 operates at any step with shift between 50 Hz and 999 kHz
so
>it will tune in any raster. The 8500 uses some sort of predefined steps but
>I might be wrong.

Although the 8500 does have pre-defined steps, you can set the steps from
500 Hz
to 199.5 Khz in 500 Hz increments. This should suite any purposes.

>The AR5000 also uses an automode bandplan that stores mode/step/bandwidth.
>You can edit this bandplan by software and it's stored in the internal

>
>The 5000 uses an external power supply (included). The radio itself
operates
>at 12 V.

Same for the 8500.

>One negative point of the 5000 is the internal relays used for switching
>filters. When the radio is scanning these relays make a lot of noise!

The 8500 also uses relays that can be heard between certain bands. The
relays
switch at 30Mhz, 500 Mhz, 1025 Mhz, 1200 Mhz, 1500 Mhz. As long as you
don't cross a boundary while scanning, everything is quite.

Hello all,

I'm thinking I may have bought the wrong scanner.....
As far as sensitivity, functions, and audio, the Pro-2048 isn't a bad deal.
(I paid $150 for it)

The problem is that I can't find any info on modifications anywhere. All I have found are the articles from a couple of years ago about how RS and Uniden where planning to make modifications virtually impossible because of some "stuff" with the FCC.

If anyone can verify the above info or has anything to add, I would appreciate it.

WGB

O.k. I have figured out the antenna length by the formula 468/freq. now I need to know if this is the total length ?I am going to make this antenna a stainless steel whip with a spring base. Now is this base included in the calculation ? Do I subtract the length of the spring from the total I come up with or not?
Thanks For all your help !
Tinker

You have to understand a few things about Radio Shaft clerks:

1) They get a base hourly wage plus commission. In order to do even
remotely close to well they must sell you stuff.

2) Turnover is *extremely* high. This makes it extremely likely that
the clerk you speak with is brand new to Radio Shaft, and probably
brand new to retail sales in general.

3) There is a lot of pressure from the top (District and Regional
managers mostly) to sell, sell,sell. Periodically management will also
target particular items for a special push, e.g. back when Radio Shaft
had just gotten it's own credit card they REQUIRED each and every
employee to answer the phone by saying "Have you applied for your
Radio Shaft Charge Card yet?" I wouldn't be surprised if there is now
an edict from the district office to push cellular phones.

4) Radio Shaft employs "spies" who pose as customers and report on
everything about the employee, from the way they are dressed to
whether they put all the cash into the cash drawer after the sale.
Employees know this, but of course don't know which customers are
actually the spies. This helps to ensure that edicts like those
mentioned in point 3 are carried out.

Combine these and other factors and what you have are a bunch of
poorly trained, inexperienced people desperate to sell you anything,
especially something the boss has told them to push. So, to answer
your question, "no" probably *isn't* good enough. ;-)

Of course, Radio Shaft is not alone in having desperate, pushy clerks.
I was in a Circuit Shitty store recently to look at tape decks, and
the clerk tried to push that lame DIVX crap on me. Guess DIVX isn't
doing so hot in the marketplace (surprise, surprise) and so the
bossman told the front line chimps to push DIVX.

I can't stand retail stores: Radio Shack sucks! Boycott them!!!
Radio Shack: I was offered a job by them because I went into RS to buy a cell phone with a friend and left w/o a phone but taught the sales person more than they were taught about communications and cellular phones. They don't know anything, they just feed their heads full of crap to sell to the stupid customers who don't know any better.

I have had a chance to meet Radio Shack's CEO his name is Len Roberts I was In Ft. Worth (where Tandy Corp. (the parent company of Radio Shack) is based out of). I sat down and talked with Mr. Roberts tell him what I think his stores should be like:

1) helpful people: not pusy sales people who are making 5.25/hr and only get a raise if they sell things that aren't worth the price.

2) hi-tech products: corner the market on something

3) make your stores customer friendly: customers dont like giving out their names and addresses

there was many more things I talked about with him, no change in the stores so maybe he should take my free advice.

Thanks.

I wonder if cellular transmissions can be blocked in a specific
direction? I've been under the impression that they are
up in the 800+mc range, which would mean that metals could
block them. Are cellular phones in cars depending on the
transparency of glass to get to the tranceiver?

Serious questions/ Can a person block the signal in a
specific direction, thus eliminating the possibility
of the transmission being triangulated?

I think there are several reasons for the ban. The idiots
reason is to protect privacy - as has already been
discussed, it currently doesn't. The 'real reason' is the
one mentioned above, and probably what about 20% of the
morons in our government had in mind when they passed it.

But where's the evil? It's been my observation that
government is a combination of misinformed do-gooders and
greedy self serving bastards fighting each other, with a
very small sprinkling of highly intelligent amoral people in
the background pulling the strings.

The bill is a joke for analog - we all know that. But what
the bill does is effectively crush commercial development of
products designed to pick up digital cell phones. There's
no financial incentive to build a radio to pick up those
bands. This is part one.

Part two is that for some reason, or so I've been led to
believe, the encoding method used for digital cellular is
weak. Strong enough to technically be encryption, and to
keep out a typical hobbyist, but not so much as to prevent
real time decoding, given the right hardware. Why?
Probably economic. But a predictable, maybe even
'steerable' decision

What that leaves is a situation where, after analog is
phased out, the feds can listen to any cell call they want,
and nobody else can, or may even believe it's possible to.

The sad part is that even if they believed this was the
intent, many people would feel to see the evil in this.
"It's for the public good."

A stretch? Then why did the feds go after the guy that
built kit for the gizmo to demodulate digital police calls,
and why did this send dozens of web site owners into a tail
spin, pulling information off their pages.

This would add to their technology base. Tapping land line
phones, for example, requires access to telco equipment,
which at the very least is apparent to the telco people.
Monitoring which numbers call which other numbers - traffic
analysis, if you will - isn't, with the right hooks. And
traffic analysis isn't protected as private, the last I
heard. The cell phone tap, which of course can't be
monitored, gives them a voice to the web of these otherwise
voiceless numbers.

Nah, couldn't happen. Our people aren't that diabolical.
:)

I don't mean to be anti-government, by any means. I believe
that, as they say, death and government are both necessary
evils, and I further believe that we have possibly the best
form of government yet devised. Yet, like death, it is
still a terrible, horrible thing to bear, and like death, it
will always seek out the weakest, most vulnerable parts of
us to destroy. We have a kinder, gentler plague.

Cheers.

Message-ID: <11722-37B91469-326@newsd-623.iap.bryant.webtv.net>
Source record: 109802

Hello everyone I need a little bit of help on how to modify my Pro-64 Radio Shack Scanner. I have been searching and looking on-line now for about 2-3 weeks on how to modify it and what to do. So I guess the simple thing is to tell you ppl what I didn't come up with so far.....

1.) A frequency database that will work with the loading software called "PROgramit". I have been doing searches for that and all I need is to find out what is the names of some of the frequency databases, what they do, and a site on where I can download them at.

2.) During my search for modifying my scanner I have found information on how to de-scramble scrambled transmissions. I red that there is a software that you can download that will allow your scanner to de-scramble radio transmissions. Here is what I came up with so far for programs to load my scanner....PROgramit, wload64.zip, and load64. Now what ones will work with the de-scrambling software I don't know. But that is just something to keep in mind when replying to this part of this post.

3.) Is there an amateur radio database that I can download from one of the amateur radio sites that will allow me to load amateur radio repeaters and other frequencies in the scanner while using one of the loading programs listed above. If that makes since to you guys.

I have soon sites on where I can modify the PRO-64 scanner for cell phone traffic but what about any other modifications. Does anyone else know of anyother modifications that can be done to it? If so for security purposes please don't reply in the newsgroup but reply via e-mail, this way it'll cover your butt and mine :) Here is what I came up with for possiable modifications for it and maybe now people can help me out.....

1.) I was reading on someone's site a little while back that there's something that you can add onto your squelch that will allow your scanner to "reset" it's self. Now when I red that the information went in one ear and out the other because it was a little to hard for me to comprehend. So if someone can explain to me a little bit more about that (in stupid terms *lol*) and if in fact that type/kind of modification can be done using my scanner.

2.) I want to pick up a little bit more frequencies then what it states in my search mode. Which ain't a lot but it's enough to play around with *l*. I would like to pick up the 220 MHZ Ham band, MARS/CAPS freqs, the upper and lower portion of the air bands (which it don't pick up the whole air band), and I would like to "fill in" the gaps between the frequencies I have in my modes and the freqs that aren't there.

3.) Any other scanner modifications that anyone can think of or had done to this scanner please feel free to e-mail me and/or post in this thread. All help, links, and advice will be taken serious and into consideration. I don't take none of my hobbies as a joke and I treat them like it's a job not a hobby. Happy Scanning ALL :)

Sincerly,
Jason Ellsworth

1481. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-08-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7pb5grgtj1@news.hawaii.edu>
Source record: 109803
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>I can't stand retail stores: Radio Shack sucks! Boycott them!!!

I recently took care of the problem with pushy sales
people, (actually people who are trying two squeeze another
dime's worth of food into their children's mouths,) because
radio shack doesn't pay worth a whoop.
The store had just had a complete turn over in staff
along with a new manager who knew little of nothing about
electronics components, what one can do with a scanner or
what antennas are needed. The manager told me the cellular
magnetic antenna would not work on my scanner for the
trunked frequencies because it was made for transmitting and
not receiving.(: "So much for my desire to glean anymore
knowledge from this individual."
Anyway I made it known to the staff that I do not like
being shadowed like a shoplifting suspect nor do I want to
be made aware of any specials or great deals unless it
concerned scanners or surveillance type equipment. No
problem! Now when I enter their store I find it refreshing
to here the manager tell the new sales rep. "Leave him
alone. He knows what he's doing."
I really don't know what I'm doing, but they believe I
do and leave me alone. A few quotes from Bill Cheek's books
will get you oohs and ahhs from the high school clerk.
In a kindly manner inform the folks you don't like to
be hovered over. I find I actually spend more time and money
in the stores when there isn't some starving salesman
irritating be enough to just get what I came for, then
scram!

I watched the movie "Scanners" the other night and saw the
hole the guy drilled in his forehead to connect a
discriminator tap. I wonder if they'll ever have a sequel
called "Trunkers?"

Norvin,

Personally, except for close out stuff, I've never found anything "cheap" at radio shack! And that goes for their Tech America as well. They're very expensive, IMHO. However, their are bargains to be had and when you need a part right away it's nice to be able to run to the store and get it.

Now about scanners. You didn't say whether you were interest in desktop, mobile or handheld. Whether "trunking" was a seperate category or not. Since you've already discounted RS, I guess you would discount my opinion that the PRO-43 was one of the best non-trunking handhelds. Well at least it's one of the most sought after used handhelds in this newsgroup.

>Any suggestions? Thanks all
>Adam

At the risk of starting another "Flame war from hell" I will add my $0.02.
I have a PCR1000. In sptie of some really nasty review and comments, mine is great. One of my best friends went for the PCR100. the 100 has stereo FM BCB recpetion, and no SSB/CW for HF. (and yes some hams use SSB/CW on 6Mtr/2Mtr/70cM/ and so on). It is a great litle radio. The software for the 100 is light years ahead of what Icom supplies for the 1000.
For the "average" scanner user and casual SWL it COULD be a good choice.
I am surprised by your comments regarding the Bearcats. Several friends have newwish units and do not have any problems. Exactly what features are you wanting for "local listening"?
I have an old Pro-16 and Pro-34 that I use daily (one ,the 16, is in my car and the 34 is at my work) and, in spite of the few "features",they do a wonderful job on keeping tabs on the local VHF/UHF "scene".
(before anyone points out the legality of mobile scanning, I have my ham license and in this state that allows me to have a scanner in my car..of course I could use my 2mtr mobile rig or HT to scan the 138 to 174 range, but they are busy monitoring my fellow hams)

Digital phones still aren't encrypted, so it is still easy to listen in on them.
You just need a different sort of receiver. If you have a digital cellular
phone, you probably already have what you need. Most of them have a
test mode that allows you to unsquelch them and manually monitor
the channels. This mode is intended for factory test and repair purposes,
but many of them will let you access it with a special keypress combination
on power up. (Most of the older analog phones had this ability too.)

Here is what I suggest. I suggest that you do some research on your own about what a great scanner is to YOU. What is considered a "great" scanner by one enthusiast might be viewed as not providing the necessary features for another enthusiast. This would all depend on just where your interests are (What you want to listen to, and what mode you need to listen to it). Other factors like sensitivity, signal - to - noise ratio, and selectivity also enter into the equation,and there are too many variables and subjective factors involved for anyone to "make up your mind for you".

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS

(Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to

use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association

(RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

1505. Repair Tips for Bearcat Scanner Radios

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications |
Corp. sells used Plectron receivers, in working condition, |
for $75-100. If you require crystals or reeds, TCS may be |
able to find some types/frequencies. Contact: |

Terry Marengi |
TCS Communications Corp. |
tel. 1-800-TCS-XMIT |
email: TERRYTCS@aol.com |

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated May 10, 1999

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

AUGUST 1999

Aug 7 (Sat) - Quincy, IL. Western Illinois Amateur Radio Club Ham Radio and Computer SWAPFEST 1999. 8:00AM to 2:00PM. The Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy with easy access from US Highway 24. Admission $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. ARRL VEC testing for all license classes at 12:30PM. Indoor Flea Market space available for $5.00 which includes one 5' table. Outdoor tailgating space - Free. Talk-in on 147.63/147.03 MHz. Plenty of convenient parking available. Lunch will be served on the grounds. Children's playground area. For additional information contact N9JF, jfunk@adams.net

Aug 8 (Sun), Peotone, IL - Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. E-mail: nf9n@aol.com. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 14 (Sat), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Aug 29 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $14.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1999

Sept 25, 26 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A crystal scanner are not working and the lamps for those channels won't light, replace IC4 or IC5 (type 7400A).

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters
Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T

hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using

green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts

of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great

searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses

custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact.

Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz

channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted

8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10

channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative

test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent

leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass,

AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz.

Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search

limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no

scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been

replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

```
:
: <snips>
:
: >The Alinco receiver is probably picking up an "image" of the cellular
: >telephone transmission. This is an artifact of the way the receiver is
: >designed. All superhetrodyne receivers (99% of the currently
: >manufactured receivers) have these images, though more expensive
: >receivers have them to a much lesser degree.
:
: yep
: >
: >The federal ban on receivers is a joke, anyway. First Congress made it
: >illegal to listen to cellular telephone conversations, as if an FBI
: >agent was going to jump out of the closet whenever someone tuned their
: >receiver within the 800MHz band. (Many TV receivers in circulation at
: >the time would tune in cellular telephone transmissions.) When this
: >obviously didn't work (as opponents said it wouldn't), Congress halted
: >sales of all cellular-capable receivers. All this is obviously a payoff
: >to the cellular telephone industry who wanted to lie to their customers
: >with a straight face and claim their phones are secure. Real security
: >would have required reengineering their phones and would have cut into
: >their profit margins, so they spent the money on politicians and lobbies
: >instead. The hypocritical handling of the Democratic party activists
: >who taped Newt Gingrich's cell phone conversation (contrasted with the
: >prosecution of Linda Tripp) shows how much of a joke it all is.
:
: I think there are several reasons for the ban. The idiots
: reason is to protect privacy - as has already been
: discussed, it currently doesn't. The 'real reason' is the
: one mentioned above, and probably what about 20% of the
: morons in our government had in mind when they passed it.
:

The Intel community really doesn't want folks using the
encryption features already built into the phones. It would
make their job harder as they would have to get a court
order to listen.

: But where's the evil? It's been my observation that
: government is a combination of misinformed do-gooders and
: greedy self serving bastards fighting each other, with a
: very small sprinkling of highly intelligent amoral people in
: the background pulling the strings.
:
```

Somewhat close. But don't under estimate how lazy
most in government are. And how all the committees
make it nearly impossible to get anything done.

: The bill is a joke for analog - we all know that. But what
: the bill does is effectively crush commercial development of
: products designed to pick up digital cell phones. There's
: no financial incentive to build a radio to pick up those
: bands. This is part one.
:

Good point. However the newer DSP radios have the
ability to have software modules added to provide newer
forms of demodulation. DSP makes all the old rules go
out the window.

: Part two is that for some reason, or so I've been led to
: believe, the encoding method used for digital cellular is
: weak. Strong enough to technically be encryption, and to
: keep out a typical hobbyist, but not so much as to prevent
: real time decoding, given the right hardware. Why?
: Probably economic. But a predictable, maybe even
: 'steerable' decision
:

The new Optoelectronics interfaces have the data splitters
built in.

: What that leaves is a situation where, after analog is
: phased out, the feds can listen to any cell call they want,
: and nobody else can, or may even believe it's possible to.
:
: The sad part is that even if they believed this was the
: intent, many people would feel to see the evil in this.
: "It's for the public good."
:

It is always a battle between those in power and
the people. Always will be. A very good reason
to work for the government at some point in your
life. It helps to have insider experience. And another
reason why we should have the Draft back.

: A stretch? Then why did the feds go after the guy that
: built kit for the gizmo to demodulate digital police calls,
: and why did this send dozens of web site owners into a tail
: spin, pulling information off their pages.
:

Data splitters are now part of Optoelectronics scanner
interfaces.

: This would add to their technology base. Tapping land line
: phones, for example, requires access to telco equipment,

: which at the very least is apparent to the telco people.
: Monitoring which numbers call which other numbers - traffic
: analysis, if you will - isn't, with the right hooks. And
: traffic analysis isn't protected as private, the last I
: heard. The cell phone tap, which of course can't be
: monitored, gives them a voice to the web of these otherwise
: voiceless numbers.
:
: Nah, couldn't happen. Our people aren't that diabolical.
: :)
:
:

One reason that Americans will never become socialists
is that we hate going to meetings.

: ----------
: I don't mean to be anti-government, by any means. I believe
: that, as they say, death and government are both necessary
: evils, and I further believe that we have possibly the best
: form of government yet devised. Yet, like death, it is
: still a terrible, horrible thing to bear, and like death, it
: will always seek out the weakest, most vulnerable parts of
: us to destroy. We have a kinder, gentler plague.
:
: Cheers.
:

People have to become involved. That means taking sides.
Work for the government for a time. Join the Army is you
are young enough. Or at least join your local police reserve,
fire reserve or emergency management chapter. Work from
inside a political party. Get to know those in power. Understand
how foolish most are.

1512. Re: Scanning AM Radio Stations

Newsgroup: rec.radio.scanner

Radio Shack used to be so cool in the 70's and part of the 80's.
Now they are floundering and on the virge of going broke, so they are trying to push those cell phones and digital satellite dishes.

Went to Radio Shack to buy a scanner antenna for my car. The sales girl
| just kept asking me if I wanted a cellular phone. I guess no isn't good
| enough.

I used to work at a Radio Shack in about 1985 here in Dallas.
No training, minimum wage, and worse, our store kept getting broke
into to the point where our neighborhood was considered a high crime zone, thus
making our entire Tandy shopping center get torn down.
Anyhow, I'm better now and make lots of money as an MCSE.

Does anyone know if the Relm MS200 is worth a hoot? I can get one for $169.95 new and wondered if its worth it. It looks and sounds great. Thanks.

Amen.
I used to work at one in college (1990ish) I was the only one in the store that really knew electronics. (I have a degree in electronics now, but I'm no genius, by any means). All they wanted to do was run people 60-100 miles away twice a month for "sales" meetings. It was a bunch of crap, "sell, sell, sell", no real product learning, no understanding, just enough to sell it and not sound (too) stupid. I was offered my job there when I was buying a battery and answered a question about a scanner for a customer because the manager or any other employee couldnt. I just thought it was a shame the guy bought it there and they didnt know anything about it. When the manager found out what I was going to school for, he offered me work. They need to hire some real tech heads and pay em for real. Dont worry their mark up is tremendous, so they would still profit! By the way, I quit them to go to work for MOTOROLA. Q.

Greatest for what?
Different scanners are better for different uses.
I use a pro16 in my car, greatest because if some fool steal it I am not
out very much.
I use a Pro34 at work, 200 VHF/UHF, with civle air is all I need here,
I am supoosed to be working.
At home I have a Pr0-2004, all tricked out with a lot of mods (pc
control, IF(both 455 and 10.7), discrimanator tap, vox/cor circuits.
And it is great for fun of the mill stuff.
And then I have a PCR1000. It is great for SWLing, hunting new VHF
federal comms etc.
Each of the above radios is great for some things and sucks for others.
Just try slipping the PCR1000 or the Pro2004 into your pocket when you
go to an airshow.

It is going to be very difficult to get the radio with the encryption
still in. If the police are anything like the mlitary, the radios are
accounted for with strict handling rules.
>It's probable that the chips are removed prior to disposal, or else
>the content of the chips is lost when the power is removed.
Encrypted radios will lose encryption if the battery dies. Also, if
the battery packs are being changed, the radio has to be off before
changing and you only have about 30-45 seconds to get the new battery
in before the radio loses encryption.
>In the case of theft or loss of a radio, the police will probably
>change their cypher.
In a lot of radios, the police or military system can either send out
a signal to disable that radio, or change the cipher on every radio
but that one.
>>People have told me that it is impossible to crack with a computer but i'm

OK They were so busy bashing each other that they left you out.
I my humble opinion it is your antenna. You are trying to use a
replacement antenna that the radio shack person believed was to be
used on a scanner. The sales person was probably under the assumption
that you'd be scanning in the normal 30mhz to 900+mhz range and
therefore sold you an antenna for that range. Truth be told now.
You'll need an antenna tuned for a lower range.

Could it be possible that YOU have a site and are jealous that it's
not getting any its?

Web SITE (notice the word site not page) creation and up keep is NO
easy task. And if he is making money from it then good for him.

Now lets break that money down into an hourly wage for his time spent
creating and managing his site?????

Hmmmm Probably $0.01 an hour! Boy he's getting rich quick! somebody
stop him!
You such an as*HOL* GO AWAY

To all who wrote the nice things about me and my site.....

Thank you for all your support while I was being roasted, toasted and turned slowly over the flames by the few.
"We" the many... do give a good name to these newsgroups as we attempt to promote the hobby of radio scanning. I appreciate all you good people out there who add your experience and just plain nice stuff to the groups.
Thanks again.... I appreciate you !!!

I have a question. Doesn't the use of digital phones mean that listening in
on conversation is almost impossible. I remember the bad old days with
analogue phones and the lack of security.

Ahhh the solarcon. I remember it well. Used to be the antron 99 with
9.9 db gain! hehehe what a joke. I sanded one and would not recomend
it if ya like your lungs where they currently are and I was told that
there is a protective UV coating on there.
As far as the 40 mhz range just work with those two rings at the
bottom section till ya get your best reception unless you have
something to brodcast there and set your match with.
Though dont mount it up yet. They did have a problem with the center
conductor inside cumming unsoldered (or broken free) from the
connector. Use it and see how it hears or again try bradcasting and
checking your impedence match

Taking a long shot - is the overpass in a depressed area ? It is possible you're passing an underground cell "tower". Occasionally a cell system will discover a small hole in their coverage due to terrain and highway construction. A buried cell site and antenna can fill in the gap and provide a signal in the underpass.

You seem to be very deluded on this subject, there are many police officers that carry scanners so that they can more quickly assist other public safety agencies that may require help. Myself I listen to a scanner purely for entertainment purposes.

For the record, the police in my area have actually authorized the local citizens patrol organization to monitor their frequency on scanners so that they may assist where possible. I guess this blows your theory that all scanner users are criminals straight to hell.

Perhaps your superiors should check into YOUR background, never know what they might find.....

What do You expect when a large percentage of those arrested (for serious crime) are found to be in possession of having a car, a wife, a cell-phone, a dog, a grandmother and even some of them actualy are drinking Coca-Cola ???

Lets put it this way.... I think your world must be pretty small stating such opinions. There is also a fact (at least where I live) that the police very often gets important tips and help from scanner enth. who happens to be in the neighbourhood of crime-scenes and therefor knows what too look for.

Best regards
Espen :-)

Hello Again,

I should have said that I was looking for both a desktop and handheld, but that no longer matters. I have ordered a mint condition PRO-2006 and I believe I will be very happy with it. Wish it scanned a little faster, but I also think that these new scanners that scan at 100 channels per second may be too fast. I would still love to hear what you all think is the best scanner wether it be desktop or handheld.

Thank You All,
Norvin Adams III

> that we have many "fans".
This does not necessarily follow. The logic only works if you hold a very black-and-white view of criminal vs. law-abiding.

> FYI In the UK, scanners seem to be confined to criminal use.
Conjecture - in your alleged line of work what sort of person do you think you are most likely to encounter? I can believe that a large number of people caught performing crimes may have radio scanners but a policeman's sample is clearly skewed so no absolute statement may be made regarding the status of ALL scanner users.

Consider yourself in a job as a steward at an airshow. You will encounter lots - and I MEAN lots - of people with radio scanners. Their use for listening to the airbands is just as contrary to the radio telecommunications act as someone listening to home office frequencies but are these people criminals? Would they try and steal an aircraft since they would know where it would be parked etc?

The answer to that depends on whether you class anyone using a scanner to listen to things they were not entitled to listen to as a "criminal" or as merely someone who is breaking a law (Like, for instance, someone who doesn't fully stop at a stop sign)

Following on from your rational argument everyone will be able to watch
you taking a piss next time you are in a 'Public toilet', 'Public
Schools' are not private and any one can decide they want to live in a
'Public House'? Just because organisations serve the public does not
mean that all their goings on ARE public, see the difference? It's like
gun ownership...if everyone is allowed to have guns then a small
criminal minority (or nutters) will kill people. If everyone can listen
in to 'Public Service' broadcasts then a small criminal, malicious, mad
minority will take advantage of the situation with a detrimental affect
on crime and disorder. Certainly NOT in the majority of the public's
interest....

Congrats and I'm sure that you'll soon understand why this radio
is held in such high regard!

> Wish it scanned a little faster, but I also think that these new scanners
> that scan at 100 channels per second may be too fast.

Like most things, don't believe everything you read. That is a
'claimed' number and really not realizable in the "real world."
Even if the box says that, expect to get in the 50-80/sec
range at best. The only radios I've used that have equaled or
exceeded the 100/sec figure are those using Opto boards and
run with PROBE software!

> "PROgramit". I have been doing searches for that and all I need is to
> find out what is the names of some of the frequency databases, what they
> do, and a site on where I can download them at.

I don't know of a frequency database like this. I don't think there are
enough owner's of Pro-64s to justify that kind of work. I'd imagine you
could start one if you wanted to devote that much time to it.

> 2.) During my search for modifying my scanner I have found information
> on how to de-scramble scrambled transmissions. I red that there is a
> software that you can download that will allow your scanner to
> de-scramble radio transmissions. Here is what I came up with so far for

> what ones will work with the de-scrambling software I don't know. But
> that is just something to keep in mind when replying to this part of
> this post.

Those programs simply load frequencies into your scanner. They do not control any other functions. So none of this software would relate in any way to software that would allow you to descramble encrypted radio communications. What kind of scrambling method are you trying to crack? If I knew that, then I could probably point you in the right direction.

> 3.) Is there an amateur radio database that I can download from one of

Kind of the same question as #1. So my answer is the same as for #1.

> I have soon sites on where I can modify the PRO-64 scanner for cell

> freqs, the upper and lower portion of the air bands (which it don't pick
> up the whole air band), and I would like to "fill in" the gaps between
> the frequencies I have in my modes and the freqs that aren't there.

The scanner doesn't have 220 MHz coverage. I do not know of any scanner anywhere that you can add 220 MHz coverage to if it didn't have it to begin with. This is not like the cellular frequencies, that are blocked, which are part of the 800 MHz band. The Pro-64 already covers MARS/CAPS frequencies. The radio covers 108 to 136.975 which is the entire civilian airband. In fact they are giving you extra since voice is only used above 118 MHz.

> 3.) Any other scanner modifications that anyone can think of or had done

If it's forbidden to listen to cops on their radio,
let's all be "criminal".

http://www.policeworld.net/user/bobcann/live.html

Here you can listen to a lot of them on the net. Am i now braking the laws?

I think this is a staggering generalisation though I can well understand a police officer holding this view because there is no doubt that scanners are used in criminal acts. Let us be clear though that in terms of the number of scanners that probably exist in the UK,only a small number are actually used as such. I doubt the serious scanner listener advertises the fact and merely uses his equipment to further his interest in radio communications and what is going on around him. Many staff in Police Fire and Ambulance Controls started their careers on such interests,in fact.

Although they have no more statutory right to listen than anyone else, a large number of personnel in the Emergency Services (including the Police) also listen to scanners. Along with the vast majority of the public who use them (including licenced radio hams, radio engineers, Control and Operational Staff in the 999 services, Coastguard/Lifeboat staff etc) I don't think very much harm is done,and as an Ambulance Officer I have seen little proof of it in my sphere of work. I understand that with the Police it can be different.

Sometimes I think we have too much to hide from the public. The onus must be on the Emergency Services to encrypt their comms if they think there is a problem (and I can well imagine that there *is* a problem for the police). But I think it wise to remember that the Police have had a lot of bad press recently and a lot of people think they are increasingly trying to hide something. Remember this is the UK and not some repressive regime

I think you make a point regarding unlawful use of scanners. But I also think you display a rather unbalanced and arrogant attitude which I find quite worrying....if you really are a Police Officer.

Have you got a web site or page that promotes the hobby of Radio Scanning or Scanners ?
Does it include scanning related information such a frequenciy lists for your local area
or a general area, model types, reviews, uses of, pictures of, modifications, enhancements,
stories, your opinions on scanning, etc. Well if you do I appreciate the time, effort and
dedication it took for you to set up that site and the equal amount it takes to maintain
that site or page.
Be it a single page or a huge site, if its got to do with promoting the hobby of
radio scanning I'd like to invite you to join a new Webring I have set up.
The name of this new webring is "Scanner Dweebs Radio Scanner WebRing
... but don't let the name fool you.
If you are familiar with my comic strip character Scanner Dweeb you know why I named
the ring after him. Even though he may get into some mis-adventures he is there to promote
and enjoy his hobby. And that is why I want to invite all web site, web page owners that have
Radio Scanner Hobby promoting areas on the world wide web to join.
Joining the ring by no means makes you a Scanner Dweeb.... there is only one, and he is on my
comic strip page.
You've worked hard getting your page/site up and running, share that information with other
hobbyists.
That's what this webring is all about.... sharing and promoting the hobby of Radio Scanning.
Check out the ring, think about it, I hope to see you as a member.
Thanks very much for your time.
To check out the ring please go to the following URL:

>dkid not do trunking outta the box. Instead you had to attach extra
>computer boards
The 2004/5/6 are all very close to being the same. The reason why I like the
4 over the 5/6 is the metal case gives somewhat more imunity from stray rf.
My "shack" is full of digital crap that gets into the 5/6 but not the 4.
Of course the 4 has the slowest (stock) scan rate of the 3.
Again "what is the best scanner" will be different for just about each of us!

There is at least one *nix program for the PCR100's "big brother", the
PRC1000. Do a net search on PCR1000 and you should be able to find it.
IF not just post a querry here and I willl check my bookmarks in the home pc.

Huh? Unless you count using a LO in your scanner for a signal
generator, scanners receive, not transmit.
Now my IC-28A......(Icom 2mtr ham radio that will scan its 16VHF
channels, or just scan up or down the 138 thru 174 range)
>freq coverage?
PCR1000 .060-1300MHz (it will receive WWVB at 60KHz I am trying to
extract time code dat)
2004 25-1200MHz
Pro16 30-54/108-136/138-174/4??-512?
Pr034 same as above plus 800
>freq pr sec?
>chanals pr sec?
Don't have the manuals handy...
>PC controlled?
PCR1000 yes and only can be used with a pc(or if you are truely insane
you can controll one with a ADM data terminal but it is an ugly method!!
Pro2004 yes with additional add-on ciruitry. Not for the faint of
heart.
Pro16 and 34 no
>Handheld/portable/desktop?
PCR1000 and Pro2004 desktop (although the both work great in a backpack
PRo16 and 34 Handheld

If you are recieving, you do not have to have an "exact match". I routinly
use a 1/4 2mtr "ham" antenna for 30 to 54 and 108 to 174 and 400 to 500
reception. While I do have antennas designed for each band, the 1/2 wave
2mtr antenna works nearly as well as a cut antenna. Now if you building
a multi-element (ie beam/yagi/log perodic) then exactness counts.
But for receiving...lighten up and listen instead of trying for perfection.
Hell, I use the stock car antenna when I am on the road in a rental car,
and it works great (now for 800MHZ this is not true).

1565. Icom PCR100 can the cell band be RESTORED????

You could just watch the codes coming from and going to the PCR100 and write a program to poke those codes to the PCR100.
http://www.sysinternals.com/ has a great program called portmon which allows you to watch serial
data going to/from serial ports and best of all, it doesn't require two serial ports and it doesn't require a breakout box.

I think some of Radio Shack's catalog numbers begin with PL-?
In that case, I bet if you looked up PL-259 indeed you would get phono plugs. :)
I agree with you, those crappy third world made nickel PL259 connectors at Radio Shack are crap, but I thought they also had silver.

Thanks for reading my post.

I have one of each radio, in good condition, both electronically and cosmetically. Displays are nice and bright. NO mods done to any of these radios.

1) The DX-440 works very well. Cosmetically, someone before me blacked out the Realistic name in the upper left corner, as well as all the keypad buttons. Don't ask me why... I don't use this radio much any more, as I have others. I don't have the box or manual, but the manual is available from Tandy's web site.

Asking $85.00 plus shipping.

2) The 2024 has 60 channels, and covers 30-54 MHz, 118-136 MHz, 138-174 MHz, and 380-512 MHz. Date code 8A1, for what that's worth. I don't have the extendable antenna, box or manual, but the manual is available from Tandy's web site.

Asking $50.00 obo.

3) The 30 was RadioShack's first programmable handheld. It has 16 channels and covers the same frequencies as the 2024. I do have the original antenna, box and manual for this unit.

Asking $35.00 obo.

Shipping is not included.

Please e-mail me if you are interested or have any questions.

Not true for GSM, at least. The A5/1 encryption is pretty strong, and
even the weaker A5/2 is not a trivial task for an eavesdropper.

See more info at:

http://kbs.cs.tu-berlin.de/~jutta/gsm/js-intro.html
http://jya.com/gsm061088.htm

The CDMA air interface is however not in itself a guarantee against
all eavesdropping, and the current IS-95 implementation suffers from a
rather weak encryption:

In contrast to the rest of the followups, I buy stuff from Radio Shack all the time. The clerks have been there a long time and leave me alone (anxiously wondering what I'm going to buy today). They always say hello and that's it.

They even tried to dig up a pro-90 scanner case (the seven cent special) over the phone, checking all the other stores. Even though none were available, they did try to help!

I joke to the clerks that I'm slowly building a Radio Shack at home. At first they didn't know what to think. ;^)>

More the exception than the rule, I know.

Just to keep the record clear;
On early (and I have no idea at what serial number it changes) PCR1000 it was easy to change the country code and restore cellphone coverage. At some point (Again I do not know when) Icom "fixxed" the EEPROM with 2 0Ohm (shunts) SMC to keep the EEPROM data from being changed. A mixed blessingin that while we lost the ability to change country codes, we also lost the risk that the EEPROMs would become corrupted.
Based on the experience that Icom had with the PCR1000, and the fact the the candy company (AKA FCC) was very unhappy (to the point the reportly threatened Icom with the loss of type acceptance on all of their equipmet), I suspect that restoring the locked out freqs will be a litle more envolved then you suggest.
Just my thoughts and I would be happy to find out that I am wrong.
I have a friend who has the '100 and he would love to unlock it.

That's too easy. I enjoy playing with them. I usually come up with something like "Hmmm. I don't remember. Do you know where I live?" with a puzzling look on my face. They don't know how to react to that.

Or, I'll look confused again, pull out my wallet as if I were digging for my license and then announce, "Oh yea, here it is. I am Genuine Cowhide Leather".

Sure...they'll call me an asshole when I leave, but they won't soon forget me.

You can get away with more when you're a dirty old bastard like me!

The real issue here is that the government does not want private citizens to have the ability to keep track of those public agencies which the citizenry funds through taxation. This is the true motivation for digital modulation, unconventional trunking schemes, laws against scanner usage in vehicles, etc.

I had the same experience a few years ago. The company I was undergoing staff reductions. They bought out the remainder of my contract so money wasn't an issue, yet I soon found myself bored sitting around the house all day. Just for something to do, I applied at my neighborhood Radio Shack. The local store manager would have been glad to have someone knowledgeable on staff, but his District Manager would not let him hire me. The store manager told me (off the record) that I was "over-qualified" for the job. What a company!

It's a common myth that the 2021 can be modified for cellular coverage. But a myth is all it is.

While it's true the 2001 can be modified to DISPLAY frequencies in the 800Mhz range, reception is impossible since the front end of the scanner is not capable of tuning these frequencies.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

One smarta-- said "okay, mr. cash" when I told him "I pay cash" when he asked my name. I had an interesting conversation with the manager of that store some months later... a rare "good guy" at a rat. shack. The kid had gotten himself booted long before I related the story to the manager.

I won't buy from the local TechAmerica (Denver) when they insisted on having my name and SSN for a $30 cash purchase. Whatever they thought they were gonna gain they lost in future business.

OK Dale: I have two amplified speakers in my JEEP.
They work great. One piece from each speaker.
Goes into 3 prong adaptor and from two sources
hooked up underneath the glove area...there is a
shelf. They work off the fuse box or off the adaptor.

I got them at Radio Shack.
I also have to Realistic Speakers for inside
for my portables. they require batteries,
but hey, RS sells C size batt's and they work
find..just have to keep taking batt's out and
putting chared one's in.

The RS speakers have mini plugs on other
end to plug into speaker.

12 volts. no problem

bill conduit
etc.

1605. FS: Radio Shack DX-440, PRO-30 & PRO-2024

Newsgroup: rec.radio.scanner
Date: 1999-08-18 00:00:00 UTC
From: "Steve B." <scanfreq@istlaplata.net>
Message-ID: <7pf8lm$cc6$1@cyberusa.com>
Source record: 109653
Cross-posted to: rec.radio.scanner,rec.radio.scanner,rec.radio.swap

Thanks for reading my post.

I have one of each radio, in good condition, both electronically and cosmetically. Displays are nice and bright. NO mods done to any of these radios.

1) The DX-440 works very well. Cosmetically, someone before me blacked out the Realistic name in the upper left corner, as well as all the keypad buttons. Don't ask me why... I don't use this radio much any more, as I have others. I don't have the box or manual, but the manual is available from Tandy's web site.

Asking $85.00 plus shipping.

2) The 2024 has 60 channels, and covers 30-54 MHz, 118-136 MHz, 138-174 MHz, and 380-512 MHz. Date code 8A1, for what that's worth. I don't have the extendable antenna, box or manual, but the manual is available from Tandy's web site.

Asking $50.00 obo.

3) The 30 was Radio Shack's first programmable handheld. It has 16 channels and covers the same frequencies as the 2024. I do have the original antenna, box and manual for this unit.

Asking $35.00 obo.

Shipping is not included.

Please e-mail me if you are interested or have any questions.

If there are any individuals out there who go to
Atlanta, Chicago or St. Louis on a regular basis to watch
airplanes, I'd very much like to hear from you and hopefully, meet.

I consider myself to be a professional airplane watcher and I take my
hobby very seriously. I go to St. Louis just about every Sunday and
to Atlanta on a quarterly basis. I'm always looking
for good contacts and gaining new friends.

Thanks!

Yes digital transmission does make it nearly impossible to receive cell phone conversations. However, retrofitting all the cellular analog sites at around US$200,000+ is something the carriers are bulking at. Atleast cellular carrier I work is! Our competitors have installed just enough sites to legally claim they digital service atleast that's what my counter parts have told me. So, until PCS system put more pressure which is not happening at this time due, cost of around US$1.5 million per cell, analog will be around for awhile. The last figure I heard was sometime around 2025 to 2030 was the projected end of analog in the US.

This is my opinion!

I work in the inner city and the reason for targeting that area is because of the population density of dope dealers to normal people. Right down from office every night after dark, at least 10 - 20 cars sit with dealers selling dope. If one drives by in a nice car they lock on to you like a heat seeking missle pestering the hell out of you to buy their crap. In fact, never do I see these dudes and dudettes driving a piece of junk car. Always are Mercedes, BMW, Porsche, etc. Most have better lawyers on the retainers than us normal working class type.

No where I live is far out in the country and if there a dope dealers out here, they must be keeping it off the streets. In fact, it will be a cold day in hell before I ever live in a city again because of my privacy, right to peace and quiet were being infringed upon by, as you labeled them, targeted masses. I say let the Feds have them because local cops wont do nothing execpt take one's assault or theft report. Most of "targeted masses" do not work, collect welfare, steal and sell dope, like several of my former neighbors.

I beilieve the law abiding citizen is being picked on. Check who lobbied for cordless phone restrictions, it sure was not the Cell phone industry. It was all those creeps out there dealing dope over cordless phones. Money talks and bull shit walks is a saying often heard in Washington DC, and that says it all. All of us are losing our rights so the petty thugs running this country can create black markets.

Take my word for it. The NSA can read it just like the front page of a newspaper. I work with military encryption, much stronger than CDMA or TDMA and they can read that if they want to expend the effort and equipment. We do build some stuff that is much more secure, but you don't even want to know the price tag (not to mention the fact that we can't sell any of it unless the government allows the sale).

Hi, Marc,

The PerCon DataFinder online frequency database at
http://www.perconcorp.com/datafinder/index.html lists these frequencies
licensed to Holly:

FREQ CALLSIGN COMPANY NAME RS CITY STATE COUNTY

154.8000 KNHB608 HOLLY, VILLAGE OF PP HOLLY MI OAKLAND
154.8000 KNHB608 HOLLY, VILLAGE OF PP HOLLY MI OAKLAND
154.9650 KAN697 HOLLY, VILLAGE OF PL HOLLY MI OAKLAND
458.1500 WPFE301 HOLLY, VILLAGE OF PL HOLLY MI OAKLAND

Do you ever hear anything from the MSP post at Dixie Hwy and Grange Hall Rd,
or are they completely digital? I certainly hope this terrible fate hasn't
befallen Holly!

(Just across the border in Livingston County)

That's exactly what I was thinking but forgot what movie that was.
There have been rock concerts with over 2million watts (I was at the 1million watt world record breaker at Texas Jam 1983, doing a firework show), but this is done with multiple amps into multiple speakers.
I'm curious (for you electronic types) how many 8ohm speakers it would take to sink 2million watts to a level where each speaker can be driven at a 200watt maximum, in order to not blow them out.

| >Notice that it can be used for a 2,000,000 watt AF amplifier too!
| >Hey, know of any speakers that can handle 2 million watts? :)
|
| Maybe that's what Marty used on the giant speaker in "Back To The Future"

800 MHz Transition Team

Exciting changes lie ahead for the San Diego Sheriffï¿½s Department.
Along with many other city and county agencies, the Sheriffï¿½s
Department will at last be able to communicate throughout the entire
region using a new Motorola 800 MHz radio system.

The project, called the Regional Communications System (RCS),
includes the City of Carlsbad, many of the fire protection districts,
and numerous city agencies. What is most exciting about the RCS is the
ability for field units to be able to talk to each other,
regardless of where they are in the county.

Jason Ellsworth wrote in message
<11722-37B91469-326@newsd-623.iap.bryant.webtv.net>...
Hello everyone I need a little bit of help on how to modify my Pro-64 Radio Shack Scanner. I have been searching and looking on-line now for about 2-3 weeks on how to modify it and what to do. So I guess the simple thing is to tell you ppl what I didn't come up with so far.....

1.) A frequency database that will work with the loading software called "PROgramit". I have been doing searches for that and all I need is to find out what is the names of some of the frequency databases, what they do, and a site on where I can download them at.

2.) During my search for modifying my scanner I have found information on how to de-scramble scrambled transmissions. I red that there is a software that you can download that will allow your scanner to de-scramble radio transmissions. Here is what I came up with so far for programs to load my scanner....PROgramit, wload64.zip, and load64. Now what ones will work with the de-scrambling software I don't know. But that is just something to keep in mind when replying to this part of this post.

3.) Is there an amateur radio database that I can download from one of the amateur radio sites that will allow me to load amateur radio repeaters and other frequencies in the scanner while using one of the loading programs listed above. If that makes since to you guys.

I have soon sites on where I can modify the PRO-64 scanner for cell phone traffic but what about any other modifications. Does anyone else know of anyother modifications that can be done to it? If so for security purposes please don't reply in the newsgroup but reply via e-mail, this way it'll cover your butt and mine :) Here is what I came up with for possiable modifications for it and maybe now people can help me out.....

1.) I was reading on someone's site a little while back that there's something that you can add onto your squelch that will allow your scanner to "reset" it's self. Now when I red that the information went in one ear and out the other because it was a little to hard for me to comprehend. So if someone can explain to me a little bit more about that (in stupid terms *lol*) and if in fact that type/kind of modification can be done using my scanner.

2.) I want to pick up a little bit more frequencies then what it states in my search mode. Which ain't a lot but it's enough to play around with *l*. I would like to pick up the 220 MHZ Ham band, MARS/CAPS freqs, the upper and lower portion of the air bands (which it don't pick up the whole air band), and I would like to "fill in" the gaps between the frequencies I have in my modes and the freqs that aren't there.

3.) Any other scanner modifications that anyone can think of or had done to this scanner please feel free to e-mail me and/or post in this thread. All help, links, and advice will be taken serious and into consideration. I don't take none of my hobbies as a joke and I treat them like it's a job not a hobby. Happy Scanning ALL :)

Sincerly,
Jason Ellsworth

Dear Newsgroup.

I came across a blurb on the Scan Shack page which tells how the Uniden BC895XLT can be modified using the virtual downconversion technique. It was written by Steve Donnell, so it's got to be the real deal!

It's a pretty simplistic mod but I don't dare tackle it without a service manual.

If anyone has done the mod or has leads to a service manual, I'd greatly appreciate hearing some feedback from you.

Thank You

David Lovering

Well, as usual, someone is spouting because they don't
understand the whole issue. And a little knowledge can
be very dangerous.

Overqualified can mean many things. HOPEFULLY in
your case, it meant that with your qualifications, you were
looked at as the kind of employee who would stick around
only to be busy and move on before you'd turn into a real
money maker.

Yeah, there's not much training, but it does take a while to
'ramp up' to where the company (and you) would have been
making, well, I don't want to say 'decent' money, but you
get the idea.

While I have to agree in principle, I don't in practice.

Insurance is insurance. You're buying protection against an
expense that may be unmanageable, and you're buying it,
a product, from a source that quite reasonably expects to make
a profit.

Blindly calling all insurance a waste is short sighted BS. Like
the people who point out how expensive whole life insurance is.
But they are so shortsighted that that can't see the whole picture,
that you need, or at least desire, the protection of some insurance,
and that at times whole life is not a stand alone product, but a
version of a product that you are weighing the cost as the difference
from term to whole life, with the other benefits of whole life. It's
not for everyone. And what you get has to be what you're willing
to pay for.

Car warrantees are the same. Weigh what it cost with what you
want to achieve. When I bought my (ex)wife the Caravan, I wanted
pretty much a vehicle that had every thing fixed. I didn't want to
worry
about the 'what if', or 'possibles'. I just wanted it fixed. To me,
the
extra $1100 tacked onto a $33K vehicle to extend the warrantee to
100K miles and 8 years (with the other perks like automatic rental
and towing) was a no brainer. It gave me what I wanted at a price
I was willing to pay.

Too many people are narrow minded in that they look at what THEY
would do, and assume it applies to everyone else.

Source record: 109715

Hi,

There is one important difference between the 2 radio's:

The AR5000 is an advanced scanning radio that can be used as a receiver
The Icom8500 is an advanced receiver that can be used as a scanning radio.

So the 5000 has splendid options for fast scanning but is not easy to
operate. I only own the 5000 and I love it.
One nice feature of the 8500 is the IF shift but is only usefull in HF
range.

Also the Ar5000 operates at any step with shift between 50 Hz and 999 kHz so
it will tune in any raster. The 8500 uses some sort of predefined steps but
I might be wrong.

The AR5000 also uses an automode bandplan that stores mode/step/bandwidth.
You can edit this bandplan by software and it's stored in the internal
EEprom. The 8500 does not have an 'upgradable' automode.

Additional info/manuals and splendid remote software of the Ar5000 can be
found at http://arc.mypage.org

The 5000 uses an external power supply (included). The radio itself operates
at 12 V.

One negative point of the 5000 is the internal relays used for switching
filters. When the radio is scanning these relays make a lot of noise!

You can get the AR5000+3 for 1800 USD at http://www.cbshop.nl They deliver
worldwide.

Tb..

You're right....and it's part of a control thing. Part of
the reason they target inner cities is probably because
they're easier targets - they can't afford a real lawyer, so
they plea bargain, even if they're innocent, then have
records and are screwed. Driving their cars around is a
bonus.

I can't understand why some people get off on running other
peoples lives, unless it's because they realize they have so
little over their pathetic own. Oh well.

Just random thoughts

No offense, but Motorola hires janitors also.

Different people within Motorola know different things, such
as the compartmentalization found at System Support. Ask
a Centralink person something about a Quantar.

Or the Factory perhaps. They know assembly, or how to run a wave
machine.

Perhaps, a FTR. We had one in our neighborhood recently. 4 days,
to fix nothing.

The point is, that just because you work for Motorola, does not mean
that you know a thing. Just the same as saying you know chemicals
because you work for Dupont.

I was listening to the then current Holly, Mi. police on 154.965 when I heard one of the officer's mention something if the "new" frequency was to be used yet. I haven't been able to determine what the new freq is yet. Does anyone have any idea how I can find out what the new freq is? Thanks, Marc.

Oh, what a bullshit thread. He's either a troll or sincere but in the wrong place, BADLY.
If you want to make out that I'm a criminal for owning a scanner, you're a busy-body and a nitwit. Keep your anti-radio garbage out of places you don't want to be in the first place. To you the whole idea of a scanner is "dubious to begin with" so just go away. I hate semi-automatic weapons, but you won't find any anti-gun posts from me in any of the hunting or gun collecting rooms.
What a nudge!
Mike

>-Phil
>

Hi Phil, I'm keeping a couple for myself. I bought several of these and selling the ones I don't need. I'm using this antenna in the house and it works better than a antenna I paid $100 for. I was told by a friend these were good antenna's, so I checked them out and there not good there great. Phil if you have any other questions I will be very happy to answer them.

Much obliged, although according to the price list on their web site
(http://www.associatedradio.com/new/radios.html#Icom) they've gone
back up to the "typical" pricing. :(

For $200 off the "usual advertised price" (which is $399.95 at most
retailers) that'd be one hell of a bargain!

>extended warranty or service contract that I would buy is on a car.

I wouldn't buy it on anything. You *know* the actuarial types have
crunched the numbers and determined how to sell you an extended
warranty yet not lose money. It's like casino gambling - the odds are
stacked enormously in the house's favor.

You're always better off taking that money and investing it; you then
have a repair fund which you can dip into if you need it and which you
can otherwise spend on yourself someday.

>So what is their markup? What do you consider tremendous? What are you using
>as a standard?

It only takes a few back-of-the-envelope calculations to see that the
profit margins are pretty high. Pick up any sale flyer and you'll see
items that are marked down 15%, 20%, 25%, and even more, and yet they
still make a profit on those items. Radio Shaft sells 1200mAH nickel
metal hydride AA cells for $5 each; the ma-and-pa store down the
street sells 1300mAH AA NiMH cells for $3 each. On little things like
the 100k resistor pack you need to finish off your project on Saturday
morning, the markup percentages are in the hundreds.

I was in a local RS a month ago, one I go into several times a
year. Once again after asking my name they asked for my address. I
told them "No, I'm not going through this again". I don't know if they
have a lousy computer system managing the database or they blow out
their records from time to time but it is a pain in the ass.
The guy looked pissed after I said no. They just don't understand that
most of us believe it's a pain. Maybe they do but HAVE to get the info
for their sales fliers. I suppose next time I go in he'll ignore me.
Fine by me!

I was just watching a show where a cop in London was riding a horse,
while people were protesting higher taxes, and the woman was knocked
down. Was that really neccessarry?
```

I hate the name, address and phone number shit.
I also hate it when they ask if I "want a cell phone or satellite dish to go
with that soldering iron" as if cell phones or satellite dishes were in the same
catagory as supersizing my meal or ordering an extra hot apple pie for my wife.
The problem is, without their cell phone and satellite dish pushing over the last 10 years,
they would have gone bankrupt, thus why they try to push them just like fast food add ons.

1687. MULTI-TRUNKING SCANNER

Newsgroup: rec.radio.scanner

I recently saw in the 2000 Radio Shack Cataloug that they will be or
already are selling a Mult-Trunking capable scanner that will cover
trunking on VHF, UHF, 800, 900, Motorola Type I, II, IIi, GE/Ericcsson,
LTR/Johnson. Is this the Radio Shack version of the Uniden BC-245.
The Scanner has a 4 line LCD Alphanumeric display, stores up to 500
frequencies. Anybody hear of this one yet? I think that it is called
the Pro-92.
Also they are advertising the Uniden Washington CB.

You know how to bait spammers but can't do a WWW search for a serial port pinout??????

You would rather wait for someone to bail you out and not type www.dogpile.com and "serial port pinout" ? WOW!

Go to: http://www.geocities.com/TheTropics/Shores/2250/pinout.html#4

I have the following for sale:

Opto Xplorer with APS105 preselector - list $1699, asking $1200
two Optolinx - list $99 asking $65 each
UK Pro 2042 with US power supply and OS535 unlockable with code (supplied)
and Programmit $550
RE2000Alpha scanner list $350, asking $250
BC245Xlt list $230, asking $175
Alpha Delta VRC Tuned Port Spkr w/equalizer & Fltrs list $225, asking $175
BC235Xlt list$220, asking $150
ICOM R2 US version, list $220, asking $175
BC895Xlt base truntracker with discriminator jack, list $215, asking $175
BC895Xlt base truntracker, list $215, asking $175
Pro-90 handheld trunktracker, list $200, asking $130
Grove SP-200 list $200, asking $150
Viking 10 hour recorder with VOX, list $190, asking $150
RadioCom 4.0 software list $180, asking $125
Uniden BCT-12 list $170, asking $125
ScanCat Gold for Windows SE list $160, asking $100
Virtual Radio 4.0 list $140, asking $100
Grove Tune 4A list $100, asking $65
two Grove Pre5A antenna preamps, list $90, asking $50 each
Lowe ACARS decoder with software and Understanding ACARS book, AirNav
software and Flight Database, list over $100, asking $65

All in mint condition. Prices include UPS ground shipping. Email if
interested. Thanks.

I have had some helpful people and some not so helpful people.
>
> 2) hi-tech products: corner the market on something
>

What like Sharper Image? The $89 Color LCD at Radio Shack probably started as a $300 item at Sharper Image. What do you mean by high tech? Most people don't want to spend huge amounts of oney on the latest technology. When several hundred thousan have shipped, and the price comes down, then it should be ready for Radio Shack. They aren't stupid.

> 3) make your stores customer friendly: customers dont like giving out
their
> names and addresses

I haven't been asked for a name or address in years. This is old. Besides, what is wrong with saying "No Thanks"?

> there was many more things I talked about with him, no change in the stores so
> maybe he should take my free advice.
>
> Thanks.

> DON'T NEED!!!!!!!!!!!

I still don't see what you hope to accomplish by boycotting Radio Shack. Do you expect something else to take it's place that will be better in selection, quality, and price? Don't get me wrong, I don't think they are the best at any of those, but I can usually count on them when I need them. Be thankful you know what to look for, and don't make others feel bad because they aren't as smart as you.

No doubt NSA can read it as I used to work within the "community". The first rule of encryption is to be able to break it before deploying in case it get stolen.

The point of my post was the average Joe/Jane on the street with his/her scanner wont be able to.

Certainly for the Cell Phone part of it.

However, pressure was brought to bear upon our elected offical to include cordless phone due to the Supreme Court ruling allowing evidence gathered by a Police Agency in Florida in the form of transcripts of cordless phone conversations.

A Deputy Sheriff friend used evidence gathered this way to prosecute several dope dealers within his neighborhood until the ECP made it illegal.

I believe dope is a big business in this country, and therefore falls under the "Golden Rule". (in case anyone has forgotten, The Golden Rule states: He who has the gold makes the rules.

Subj: RE: new scanner!! Pro-92?
Date: 8/18/99 2:56:01 PM Pacific Daylight Time
From: support@tandy.com (RS Store POS Mail user)
To: Emoney250@aol.com ('Emoney250@aol.com')

We were wrong in our previous reply. We do not have a copy of the owner's manual available as we had thought. The only information we have is:

Frequency Coverage.....29-54MHz
108-174 MHz
380-512 MHz
806-966 MHz (excluding cellular)
Power.....Six 'AA' batteries
AC Adapter Cat. No. 273-1767
DC Adapter Cat. No. 273-1810

Follows analog Motorola Type I, II, I/II, GE/Ericsson and Johnson/Uniden trunked systems. Scans up to 10 trunked systems at the same time or trunked and conventional channels together. Enter names of services into memory and see them on the 4-line display as you scan. Features include weather alert with SAME, CTCSS/DSC decode and cloning interface.

Thank you,

Tandy Product Support Center

I do not know about that both times I bought the extended warranty on a used car it paid off. Maybe because most cars made in the US are a gamble to buy. I must have been lucky.

Well gee whiz, you're a COPPER, so think about it. How many "non-criminals" do you encounter on-the-job, scanner or not? I highly doubt that your dispatcher sends you to locations where crimes are NOT being committed. So, do you think that maybe, just MAYBE your perception of the general public is a little skewed, by design? Combining your perception and pseudo-logic, the following are also true:

-- Robberies are commonly committed with a "lookout" man nearby, so EVERYONE loitering outside a storefront is a "lookout" for a crime-in-progress

-- Drug dealers carry beepers, so EVERYONE who carries a beeper should be searched for narcotics

-- People fleeing a crime scene drive at high speeds, so EVERYONE who is speeding is fleeing the scene of a crime

-- Death threats are many times called-in from pay phones, so EVERYONE on a pay phone should have their ass hauled into the station for questioning

Gosh, everything is so simple when the right mentality is engaged. Well, gotta go! I just heard that the cops are busy with a hostile drunk across town. I could change out of my pajamas and snatch that six-pack of soda I've been casing at the grocery store.

Source record: 109567

You can put the case on the radio with the belt clip still attached, but the belt clip will be inside the case and cause the case to bulge out. The only way to use the belt clip with the case is to cut off the leather belt loop, then cut a slot for the belt loop to protrude through the back of the case.
Much better is to take the case to a shoe repair shop or other leather working shop and have them install two heavy duty snaps at the bottom of the belt loop. Then remove the belt clip from the radio and put it in the case. With the snaps installed you can put the case on and take it off without having to undo your belt.
Make sure that when they install the snaps that they line the inside of the case with some soft leather like suede, at least over the snaps, or they will scratch the back of your radio.

Are you sure your interface delivers output on CTS?
Many HAMCOM interfaces uses DSR instead in which case you need
to configere the software for this.

-Suggested search range for other air to air comms:
122.000 -to- 124.000 25 Khz steps

-The majority of high performance jet aircraft will fly in from Gary Airport, Thunderbirds included.

-Heard Thunderbird 8 land at Gary yesterday, but not a peep heard from the team so far. They should be up today spotting landmarks. Will post more, but best bets would seem to be: 141.850, 143.850, 235.250, 322.950, or try a net search for "Thunderbirds Frequencies", or our web page.

-COAST GUARD:
156.800, 157.050, 157.100, 157.150, 157.175, 282.8, 381.8
I Think the cutter Acacia is already here. Sad business yesterday w/drowned boater & his daughters. Never underestimate Lake Michigan.

-The Lake Michigan Marine calling frequency has changed from channel 16 - 156.800 to channel 9 - 156.450. All the marine channels will be busy.

-Park District Lifeguard supervisors are on 45.92. Other Park Dist ops on 151.295 and 151.190.

-Best CPD Freqs: 460.250, 460.350, 460.125, 460.525, 460.300, 453.825. Their marine units are on the trunked system for boat to boat comms. (See our web page).

-Last year's rental radios to the concessions / show operators were from Comm Direct, were VHF, and had some pretty odd ball VHF simplex stuff programmed in. Some of the freqs were: 151.145, 151.505, 151.565, 151.625, 151.955, 154.600, 154.965. Hope to confirm some of these on Friday. Always search around for rental radio comms.

-The Goodyear Blimp has been very, very active from Palwaukee airport - tower - 119.900. Comms w/team on 151.625 (151.4) continue. They are actually here for the auto race on Saturday but may end up making a pass or two either before or after the show one of the days.

-If you are coming to the show use public transportation to get close, then walk in. Two million folks usually show, there is no where to park and the city WILL tow your car (quickly). City Auto pound is a notorious place. I also suggest bringing a bag lunch. Food concessions are there, but few and far between and expensive. A lot of folks bring bicycles / roller blades - either will get real tiresome in this crowd. Dont bring your dog - it's loud show (why do people bring dogs and newborn infants to airshows? - it's dumb).

More info on the CARMA web page:
http://www.theramp.net/shabec/carma.htm

Oh, and according to several folks who have been sending me tons of flame mail, I am, personally, a real jerk, so don't listen to any of the above. I don't know my butt from a hole in the ground, and I'm sure all of the above information is wrong, so just forget I posted it, thanks.

1724. FS: Radio Shack DX-440, PRO-30, PRO-2024

Newsgroup: rec.radio.scanner
Date: 1999-08-19 00:00:00 UTC
From: "Steve B." <scanfreq@istlaplata.net>
Message-ID: <7ph2cf$rj2$2@cyberusa.com>
Source record: 109575
Cross-posted to: rec.radio.scanner,rec.radio.swap,alt.radio.scanner

Thanks for reading my post.

I have one of each radio, in good condition, both electronically and cosmetically. Displays are nice and bright. NO mods done to any of these radios.

1) The DX-440 works very well. Cosmetically, someone before me blacked out the Realistic name in the upper left corner, as well as all the keypad buttons. Don't ask me why... I don't use this radio much any more, as I have others. I don't have the box or manual, but the manual is available from Tandy's web site.

Asking $85.00 plus shipping.

2) The 2024 has 60 channels, and covers 30-54 MHz, 118-136 MHz, 138-174 MHz, and 380-512 MHz. Date code 8A1, for what that's worth. I don't have the extendable antenna, box or manual, but the manual is available from Tandy's web site.

Asking $50.00 obo.

3) The 30 was Radio Shack's first programmable handheld. It has 16 channels and covers the same frequencies as the 2024. I do have the original antenna, box and manual for this unit.

Asking $35.00 obo.

Shipping is not included.

Please e-mail me if you are interested or have any questions.

I would like to respond,first I have a ham ticket, it was cheaper to buy a scanner than to buy the ham radios for the different frequencies, I have the Pro 2035 1000 ch scanner, and I would like to ask (what do the police want to hide, here in the states they are public servants and work for us the citizens of our different communities) Just my two cents.

:This new year my old and trustworthy Cellphone is going to die.
:All cell providers for the 900Mhz band is closing it down.

In what country is this happening?

:Now i have to find someting new to use it for.
:Can i build it to a scanner for around 900MHz?
:It is analog, handheld. Buildt in sweden

I was not aware of any analog in the 900MHz band. Has provision been made in your country for people such as yourself to switch to some other band? Is it only 900MHz that is closing? Is the 900MHz band required there for digital services?

CDMA is direct sequence spread spectrum modulation,
same or similar to GPS.
Therefore you can be located to about 50 meters easily,
if reception conditions are good, you may be spotted
to within 15 meter accuracy.

GSM may be less accurate, guess which system will be
preferred by the governements.

What a confusion there, here and everywhere, about digital security.
GSM Digital phones are secure, nobody can decode them off the air.
FBI, CIA, KGB and colleguaes, are fed the conversation
from the phone net provider on request.
For decoding you need to know the 'master key'
which is in your SIM card and in the provider's server only.

CDMA security may be weaker? I do not know.

While I've read several time in R.R.S that scanners are illegal in
Mexico, I have no first hand knowledge of this. However, I can tell you
that in Mexico city, street vendors will sell you just about anything -
from software that is illegal in the United States to pellet guns that
look so real that you'd never know the difference if you were held up.
One thing I never saw openly displayed by any vendor in Mexico City was
scanners. It seems to me that if they *were* legal, you'd have no
trouble getting one, and you'd see them on the same street vendor tables
with the pellet guns, handcuffs, military surplus, and so forth. I
certainly would never risk taking a scanner into Mexico. It just
wouldn't be worth it.

I was using a colloquialism (that's "slang" to you, junior). This is, after all, a *casual* forum, not a place where I should be expected to meet high academic standards (especially coming from Mackey-tards with their mail order diplomas). If you want to "grade" my dissertation for grammar, I'll be happy to give you the title so you can buy a copy from University Microfilms, Inc. And yes, I realize that I am now contributing to providing the idiots with the audience that they want. But this is it. Don't expect a reply to what-ever moronic flames you come up with.

Holy Smokes, I can't seem to get a post in here edgewise!! Read all the threads. I laughed, I cried, I threw up. I feel so sorry for the UK for having a cop on its payroll with that kind of narrow minded attitude. He would never survive in America, at least not in my city.

In Phoenix, Arizona, not only do the police know we have scanners, they PROVIDE them to us. We belong to a group known as Blockwatchers on Patrol, and we volunteer our time to drive around our neighborhoods as an extension of the eyes and ears of the police. We carry cell phones to report what we see, and the scanners allow us to monitor what is happening in respect to the crime or suspicious activity we just reported. We are not police. We are just average citizens concerned about reducing crime in our city. They know the criminals also have scanners, but ours are bigger than theirs!

So, Mr. UK policeman, perhaps you should re-address your comments only to your countrymen.

Hello Mark,

Just to share a story concerning your enjoyment of watching planes. As I grew up, part of my life was spend in an apartment complex right in the landing path of ORD. It was considered by most to be an undesirable location to live... but as a kid who enjoyed the sight of a landing aircraft almost low enough to reach out and touch...I was in Heaven. The landing lights, as they shone in my window, would sweep from floor to wall as the big jets roared overhead at night. I got to see a lot of the new planes when they first came out. I spend many hours sitting by the window resting my head on the window ledge. At that time I didn't have a scanner, cause they weren't invented yet, and I didn't have an air band radio.... so I just gazed in amazement. Visual intake.... now days you can combine the visual with the audio and have a much more HIGH TECH show. Just thought I'd share that little bit of history..... I mentioned the word scanner in the text of this message ....so I stayed on topic....
Enjoy !

Since listening to police frequencies is illegal in your country, then it is obvious that anyone caught with a scanner is assumed to be guilty. Rather makes it clear why americans had to kick your limey butts out of our country, since your arrogance so obviously distorted your justice system. Seems you still have the same attitude and with it the same sorts of problems. We note that since you have outlawed listening to police frequencies, you have not eliminated crime. You also have tougher gun laws, but you still have crime. Maybe you should wake up and realize americans don't follow your class system and we believe each citizen has certain unalienable rights that should not be abridged by the aristocracy as in your "wonderful' country.

Let's face it criminals will use whatever means they can to commit their crimes. Condemning people for enjoying a hobby that just so happens to also allow them to keep tabs on their public servants is a clear example of your arrogance and disdain for your citizens.

By a "line antenna" are you speaking of a long wire? And 25 to 1300
band? Do you mean megahertz as in 25.030 and 1300.2384 mhz?

Well making a long wire antenna for these depends on how sensitive
you'd like it to be and where you'll be listening more. It may be
cheaper (and certianly less work) to buy an antenna for this "spread"
of freqs.

I know I know!! Bad Phil!!! No biscuit!!;-)

It was a joke ok, lighten up.... I won't bother him anymore. He obviously
has no sense of humor (even willi thought it was funny!) so that's my bad I
guess.. I was just trying to have some fun...

Sheesh!

Hello,

I am looking for a PRO-2006 Box and Owner's Manual. I want them as I am a collector and wish the 2006 I just bought had them. Box and manual must not have any writing, marks, etc. of any kind. E-mail me with a price and we'll see what we can do.

Thanks,
Norvin Adams III
